# Service Manual <br> Air Conditioner 

> Indoor Unit CS-YA18NKS CS-YA24NKS

## WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the products dealt with in this service information by anyone else could result in serious injury or death.

17.2 Outdoor Unit ..... 56

## 1. Safety Precautions

- Read the following "SAFETY PRECAUTIONS" carefully before perform any servicing.
- Electrical work must be installed or serviced by a licensed electrician. Be sure to use the correct rating of the power plug and main circuit for the model installed.
- The caution items stated here must be followed because these important contents are related to safety. The meaning of each indication used is as below. Incorrect installation or servicing due to ignoring of the instruction will cause harm or damage, and the seriousness is classified by the following indications.

| $\boldsymbol{I}$ WARNING | This indication shows the possibility of causing death or serious injury. |
| :--- | :--- | :--- |
| $\boldsymbol{A}$ CAUTION | This indication shows the possibility of causing injury or damage to properties. |

- The items to be followed are classified by the symbols:

|  | This symbol denotes item that is PROHIBITED from doing. |
| :--- | :--- |

- Carry out test running to confirm that no abnormality occurs after the servicing. Then, explain to user the operation, care and maintenance as stated in instructions. Please remind the customer to keep the operating instructions for future reference.

##  <br> WARNING

1. Do not modify the machine, part, material during repairing service.
2. If wiring unit is supplied as repairing part, do not repair or connect the wire even only partial wire break. Exchange the whole wiring unit.
3. Do not wrench the fasten terminal. Pull it out or insert it straightly.
4. Engage dealer or specialist for installation and servicing. If installation of servicing done by the user is defective, it will cause water leakage, electrical shock or fire.
5. Install according to this installation instructions strictly. If installation is defective, it will cause water leakage, electric shock or fire.
6. Use the attached accessories parts and specified parts for installation and servicing. Otherwise, it will cause the set to fall, water leakage, fire or electrical shock.
7. Install at a strong and firm location which is able to withstand the set's weight. If the strength is not enough or installation is not properly done, the set will drop and cause injury.
8. For electrical work, follow the local national wiring standard, regulation and the installation instruction. An independent circuit and single outlet must be used. If electrical circuit capacity is not enough or defect found in electrical work, it will cause electrical shock or fire.
9. This equipment is strongly recommended to install with Earth Leakage Circuit Breaker (ELCB) or Residual Current Device (RCD). Otherwise, it may cause electrical shock and fire in case equipment breakdown or insulation breakdown.
10. Do not use joint cable for indoor / outdoor connection cable. Use the specified Indoor/Outdoor connection cable, refer to installation instruction CONNECT THE CABLE TO THE INDOOR UNIT and connect tightly for indoor / outdoor connection. Clamp the cable so that no external force will be acted on the terminal. If connecting or fixing is not perfect, it will cause heat up or fire at the connection.
11. Wire routing must be properly arranged so that control board cover is fixed properly. If control board cover is not fixed perfectly, it will cause heat-up or fire at the connection point of terminal, fire or electrical shock.
12. When install or relocate air conditioner, do not let any substance other than the specified refrigerant, eg. air etc. mix into refrigeration cycle (piping). (Mixing of air etc. will cause abnormal high pressure in refrigeration cycle and result in explosion, injury etc.).
13. Do not install outdoor unit near handrail of veranda. When installing air-conditioner unit at veranda of high rise building, child may climb up to outdoor unit and cross over the handrail and causing accident.
14. This equipment must be properly earthed. Earth line must not be connected to gas pipe, water pipe, earth of lightning rod and telephone. Otherwise, it may cause electric shock in case equipment breakdown or insulation breakdown.
15. Keep away from small children, the thin film may cling to nose and mouth and prevent breathing.
16. Do not use unspecified cord, modified cord, joint cord or extension cord for power supply cord. Do not share the single outlet with other electrical appliances. Poor contact, poor insulation or over current will cause electrical shock or fire.
17. Tighten the flare nut with torque wrench according to specified method. If the flare nut is over-tightened, after a long period, the flare may break and cause refrigerant gas leakage.
18. During pump down operation, stop the compressor before remove the refrigeration piping. (Removal of compressor while compressor is operating and valves are opened will cause suck-in of air, abnormal high pressure in refrigeration cycle and result in explosion, injury etc.)
19. After completion of installation or service, confirm there is no leakage or refrigerant gas. It may generate toxic gas when the refrigerant contacts with fire.
20. Ventilate if there is refrigerant gas leakage during operation. It may cause toxic gas when refrigerant contacts with fire.
21. Do not insert your fingers or other objects into the unit, high speed rotating fan may cause injury.
22. Must not use other parts except original parts described in catalog and manual.
23. Using of refrigerant other than the specified type may cause product damage, burst and injury etc.

## © caution

1. Do not install the unit at place where leakage of flammable gas may occur. In case gas leaks and accumulates at surrounding of the unit, it may cause fire.
2. Carry out drainage piping as mentioned in installation instructions. If drainage is not perfect, water may enter the room and damage the furniture.
3. Tighten the flare nut with torque wrench according to specified method. If the flare nut is over-tightened, after a long period, the flare may break and cause refrigerant gas leakage.
4. Do not touch outdoor unit air inlet and aluminium fin. It may cause injury.
5. Select an installation location which is easy for maintenance.
6. Pb free solder has a higher melting point than standard solder; typically the melting point is $50^{\circ} \mathrm{F}-70^{\circ} \mathrm{F}\left(30^{\circ} \mathrm{C}-40^{\circ} \mathrm{C}\right)$ higher. Please use a high temperature solder iron. In case of the soldering iron with temperature control, please set it to $700 \pm 20^{\circ} \mathrm{F}\left(370 \pm 10^{\circ} \mathrm{C}\right)$.
Pb free solder will tend to splash when heated too high (about $1100^{\circ} \mathrm{F} / 600^{\circ} \mathrm{C}$ ).
7. Power supply connection to the air conditioner. Connect the power supply cord of the air conditioner to the mains using one of the following methods.
Power supply point shall be the place where there is ease for access for the power disconnection in case of emergency. In some countries, permanent connection of this room air conditioner to the power supply is prohibited.
i. Power supply connection to the receptacle using a power plug. Use an approved 15/16A (3/4~1.5HP) or 16A (2.0HP) or 20A (2.5HP) or $25 \mathrm{~A}(3.0 \mathrm{HP})$ power plug with earth pin for the connection to the socket.
ii. Power supply connection to a circuit breaker for the permanent component. Use an approved 16A (3/4~2.0HP) or 20A (2.5HP) or $25 \mathrm{~A}(3.0 \mathrm{HP})$ circuit breaker for the permanent connection. It must be a double pole switch with a minimum 3.0 mm contact gap.
8. Do not release refrigerant during piping work for installation, servicing, reinstallation and during repairing a refrigerant parts. Take care of the liquid refrigerant, it may cause frostbite.
9. Installation or servicing work: It may need two people to carry out the installation or servicing work.
10. Do not install this appliance in a laundry room or other location where water may drip from the ceiling, etc.
11. Do not sit or step on the unit, you may fall down accidentally.
12. Do not touch the sharp aluminium fin, sharp parts may cause injury.

If you are required to handle sharp parts during installation or servicing, please wear hand glove.
Sharp parts may cause injury.

### 9.2 Outdoor Unit

### 9.2.1 Main Printed Circuit Board

## 10. Installation Instruction

### 10.1 Select the Best Location

### 10.1.1 Indoor Unit

- Do not install the unit in excessive oil fume area such as kitchen, workshop and etc.
- There should not be any heat source or steam near the unit.
- There should not be any obstacles blocking the air circulation.
- A place where air circulation in the room is good.
- A place where drainage can be easily done.
- A place where noise prevention is taken into consideration.
- Do not install the unit near the door way.
- Ensure the spaces indicated by arrows from the wall, ceiling, fence or other obstacles.
- Recommended installation height for indoor unit shall be at least 2.5 m .

### 10.1.2 Outdoor Unit

- If an awning is built over the unit to prevent direct sunlight or rain, be careful that heat radiation from the condenser is not obstructed.
- There should not be any animal or plant which could be affected by hot air discharged.
- Keep the spaces indicated by arrows from wall, ceiling, fence or other obstacles.
- Do not place any obstacles which may cause a short circuit of the discharged air.
- If piping length is over the [piping length for additional gas], additional refrigerant should be added as shown in the table.

| Model | Horse <br> Power <br> (HP) | Piping size |  | Std. Length (m) | Max. Elevation (m) | Min. Piping Length (m) | Max. <br> Piping <br> Length <br> (m) | Additional Refrigerant (g/m) | Piping Length for add. gas (m) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Gas | Liquid |  |  |  |  |  |  |
| YA18*** | 2.0HP | $\begin{array}{\|c} 12.7 \mathrm{~mm} \\ \left(1 / 2^{\prime \prime}\right) \end{array}$ | 6.35 mm |  | 10 | 3 | 15 | 20 | 7.5 |
| YA24** | 2.5HP | $\begin{gathered} 15.88 \mathrm{~mm} \\ \left(5 / 8^{\prime \prime}\right) \end{gathered}$ | (1/4 |  | 10 | 3 | 15 | 30 | 7.5 |

## Example: For YA18***

If the unit is installed at 10 m distance, the quantity of additional refrigerant should be $50 \mathrm{~g} . . .(10-7.5) \mathrm{mx}$ $20 \mathrm{~g} / \mathrm{m}=50 \mathrm{~g}$.

### 10.1.3 Indoor/Outdoor Unit Installation Diagram

### 10.2 Indoor Unit

### 10.2.1 How to Fix Installation Plate

The mounting wall shall be strong and solid enough to prevent if from the vibration.

The center of installation plate should be at more than (1) at right and left of the wall.
The distance from installation plate edge to ceiling should more than (2).
From installation plate center to unit's left side is (3).
From installation plate center to unit's right side is (4).
(B) : For left side piping, piping connection for liquid should be about (5) from this line.
: For left side piping, piping connection for gas should be about © from this line.
1 Mount the installation plate on the wall with 5 screws or more (at least 5 screws).
(If mounting the unit on the concrete wall, consider using anchor bolts.)

- Always mount the installation plate horizontally by aligning the marking-off line with the thread and using a level gauge.
2 Drill the piping plate hole with $\varnothing 70 \mathrm{~mm}$ hole-core drill.
- Putting measuring tape at position as shown in the diagram above. The hole center is obtained by measuring the distance namely 128 mm for left and right hole respectively. Another method is intersection point of arrow mark extension. The meeting point of the extension arrow mark is the hole center position.
- Drill the piping hole at either the right or the left and the hole should be slightly slanting to the outdoor side. (refer to step 10.2.2)

### 10.2.2 To Drill a Hole in the Wall and Install a Sleeve of Piping

1 Insert the piping sleeve to the hole.
2 Fix the bushing to the sleeve.
3 Cut the sleeve until it extrudes about 15 mm from the wall.

4 Finish by sealing the sleeve with putty or caulking compound at the final stage.

### 10.2.3 Indoor Unit Installation

- Do not turn over the unit without it's shock absorber during pull out the piping.

It may cause intake grille damage.

- Use shock absorber during pull out the piping to protect the intake grille from damage

### 10.2.3.1 For the right rear piping

| Step-1 | Pull out the Indoor piping |
| :--- | :--- |
| Step-2 | Install the Indoor Unit |
| Step-3 | Secure the Indoor Unit |
| - If indoor power supply, excess length of power supply must <br> arrange accordingly, please refer "Power supply cord <br> arrangement" before secure the indoor unit. |  |
| Step-4 | Insert the connection cable |

### 10.2.3.2 For the right and right bottom piping

| Step-1 | Pull out the Indoor piping |
| :--- | :--- |
| Step-2 | Install the Indoor Unit |
|  |  |
| Step-3 | Insert the connection cable |
|  |  |
| Step-4 | Secure the Indoor Unit |

- If indoor power supply, excess length of power supply must arrange accordingly, please refer "Power supply cord arrangement" before secure the indoor unit.

### 10.2.3.3 For the embedded piping

| Step-1 | Replace the drain hose |
| :---: | :---: |
| $\square$ |  |
| Step-2 | Bend the embedded piping |
| - Use a spring bender or equivalent to bend the piping so that the piping is not crushed. |  |
| Step-3 | Pull the connection cable into Indoor Unit |
|  | - The inside and outside connection cable can be connected without removing the front grille. |
| Step-4 | Cut and flare the embedded piping |
|  | - When determining the dimensions of the piping, slide the unit all the way to the left on the installation plate. <br> - Refer to the section "Cutting and flaring the piping". |
| Step-5 | Install the Indoor Unit |
|  |  |
| Step-6 | Connect the piping |
|  | - Please refer to "Connecting the piping" column in outdoor unit section. (Below steps are done after connecting the outdoor piping and gas-leakage confirmation.) |
| Step-7 | Insulate and finish the piping |
|  | - Please refer to "Insulation of piping connection" column as mentioned in indoor/outdoor unit installation. |
| Step-8 | Secure the Indoor Unit |

(This can be used for left rear piping and bottom piping also.)

| Connection cable <br> Adjust the piping slightly downwards. |  |
| :---: | :---: |
| - How to pull the piping and drain hose out, in case of the embedded piping. <br> Apply putty or caulking material to seal the wall opening. <br> PVC tube for drain hose (VP-20) | - In case of left piping how to insert the connection cable and drain hose. <br> (For the right piping, follow the same procedure) |

### 10.2.4 Connect the Cable to the Indoor Unit

1 The inside and outside connection cable can be connected without removing the front grille.
2 Connection cable between indoor unit and outdoor unit shall be approved polychloroprene sheathed 5 x $2.5 \mathrm{~mm}^{2}(2.0 \sim 2.5 \mathrm{HP})$ flexible cord, type designation 245 IEC 57 or heavier cord.

| Terminals on the indoor unit | 1 | 2 | 3 | 4 |
| :--- | :---: | :---: | :---: | :---: |
| Colour of wires |  | $(1)$ |  |  |
| Terminals on the outdoor unit | 1 | 2 | 3 | 4 |

- Secure the connection cable onto the control board with the holder.

| § WARNING |
| :---: |
| This equipment must be properly earthed. |

- Ensure the colour of wires of outdoor unit and the terminal Nos. are the same to the indoor's respectively.
- Earth wire shall be Yellow/Green (Y/G) in colour and longer than other AC wires for safety reason.

### 10.2.5 Wire Stripping and Connecting Requirement

Do not joint wires
Indoor power supply model (1.0HP~2.5HP)

(!) Use complete wire without joining.
(! Use approved socket and plug with earth pin.
(! Wire connection in this area must follow to national wiring rules.
Indoor power supply model (1.0HP~2.5HP)

Outdoor power supply model (3.0HP)

### 10.3 Outdoor Unit

### 10.3.1 Install the Outdoor Unit

- After selecting the best location, start installation to Indoor/Outdoor Unit Installation Diagram.

1 Fix the unit on concrete or rigid frame firmly and horizontally by bolt nut ( $\varnothing 10 \mathrm{~mm}$ ).
2 When installing at roof, please consider strong wind and earthquake.
Please fasten the installation stand firmly with bolt or nails.

| Model | A | B | C | D |
| :---: | :---: | :---: | :---: | :---: |
| YA18***, YA24*** | 612.5 mm | 131 mm | 19 mm | 383 mm |

### 10.3.2 Connecting the Piping

### 10.3.2.1 Connecting the Piping to Indoor

Please make flare after inserting flare nut (locate at joint portion of tube assembly) onto the copper pipe. (In case of using long piping)

Connect the piping

- Align the center of piping and sufficiently tighten the flare nut with fingers.
- Further tighten the flare nut with torque wrench in specified torque as stated in the table.

### 10.3.2.2 Connecting the Piping to Outdoor

Decide piping length and then cut by using pipe cutter. Remove burrs from cut edge.
Make flare after inserting the flare nut (locate at valve) onto the copper pipe.
Align center of piping to valve and then tighten with torque wrench to the specified torque as stated in the table.

| Do not over tighten, over tightening may cause gas leakage |  |
| :---: | :---: |
| Piping size | Torque |
| $6.35 \mathrm{~mm}(1 / 4 ")$ | $[18 \mathrm{~N} \cdot \mathrm{~m}(1.8 \mathrm{kgf} . \mathrm{m})]$ |
| $9.52 \mathrm{~mm}(3 / 8$ ") | $[42 \mathrm{~N} \cdot \mathrm{~m}(4.3 \mathrm{kgf} . \mathrm{m})]$ |
| $12.7 \mathrm{~mm}\left(1 / 2^{\prime \prime}\right)$ | $[55 \mathrm{~N} \cdot \mathrm{~m}(5.6 \mathrm{kgf} . \mathrm{m})]$ |
| $15.88 \mathrm{~mm}\left(5 / 8^{\prime \prime}\right)$ | $[65 \mathrm{~N} \cdot \mathrm{~m}(6.6 \mathrm{kgf} . \mathrm{m})]$ |
| $19.05 \mathrm{~mm}(3 / 4 ")$ | $[100 \mathrm{~N} \cdot \mathrm{~m}(10.2 \mathrm{kgf} . \mathrm{m})]$ |

### 10.3.3 Evacuation of the Equipment

FOR ENVIRONMENTAL PROTECTION, MANUFACTURER STRONGLY RECOMMENDS TO USE EVACUATION METHOD.

1 Connect a charging hose with a push pin to the Low side of a charging set and the service port of the 3-way valve.

- Be sure to connect the end of the charging hose with the push pin to the service port.

2 Connect the center hose of the charging set to a vacuum pump.
3 Turn on the power switch of the vacuum pump and make sure that the needle in the gauge moves from $0 \mathrm{cmHg}(0 \mathrm{MPa})$ to $-76 \mathrm{cmHg}(-0.1 \mathrm{MPa})$. Then evacuate the air approximately ten minutes.
4 Close the Low side valve of the charging set and turn off the vacuum pump. Make sure that the needle in the gauge does not move after approximately five minutes.
Note: BE SURE TO TAKE THIS PROCEDURE IN ORDER TO AVOID REFRIGERENT GAS LEAKAGE.
5 Disconnect the charging hose from the vacuum pump and from the service port of the 3-way valve.
6 Tighten the service port caps of the 3-way valve at a torque of $18 \mathrm{~N} \cdot \mathrm{~m}$ with a torque wrench.
7 Remove the valve caps of both of the 2-way valve and 3-way valve. Position both of the valves to "OPEN" using a hexagonal wrench ( 4 mm ).
8 Mount valve caps onto the 2-way valve and the 3-way valve.

- Be sure to check for gas leakage.
- If gauge needle does not move from $0 \mathrm{cmHg}(0 \mathrm{MPa})$ to $-76 \mathrm{cmHg}(-0.1 \mathrm{MPa})$, in the step (3) above take the following measure:
- If the leak stops when the piping connections are tightened further, continue working from step (3).
- If the leak does not stop when the connections are retightened, repair location of leak.
- Do not release refrigerant during piping work for installation and reinstallation.
- Take care of the liquid refrigerant, it may cause frostbite.

### 10.3.4 Air Purging of the Piping and Indoor

The remaining air in the Refrigeration cycle which contains moisture may cause malfunction on the compressor.
1 Remove the caps from the 2-way and 3-way valves.
2 Remove the service-port cap from the 3-way valves.
3 To open the valve, turn the valve stem of 2-way valve counter-clockwise approx. $90^{\circ}$ and hold it there for ten seconds, then close it.
4 Check gas-leakage of the connecting portion of the pipings.

- For the left pipings, refer to item 4(A).

4(A). Checking gas leakage for left piping

1) a. Connect the manifold gauge to the service port of 3-way valve.
b. Measure the pressure.
2) a. Keep it for 5-10 minutes.
b. Ensure that the pressure indicated on the gauge is the same as that of measured during the first time.

### 10.3.5 Connect the Cable to the Outdoor Unit

1 Remove the control board cover from the unit by loosening the screw.
2 Connection cable between indoor unit and outdoor unit shall be approved polychloroprene sheathed $5 \times 2.5 \mathrm{~mm}^{2}$ (2.0~ 2.5HP) flexible cord, type designation 245 IEC 57 or heavier cord.

3 Secure the cable onto the control board with the holder.

4 Attach the control board cover back to the original position with the screw.
5 For wire stripping and connection requirement, refer to instruction 10.2.4 of the indoor unit.

## ^ WARNING

(1) This equipment must be properly earthed.

- Earth wire shall be Yellow/Green (Y/G) in colour and longer than the other AC wires for safety reason.

### 10.3.6 Pipe Insulation

1 Please carry out insulation at pipe connection portion as mentioned in Indoor/Outdoor Unit Installation Diagram. Please wrap the insulated piping end to prevent water from going inside the piping.
2 If drain hose or connecting piping is in the room (where dew may form), please increase the insulation by using POLY-E FOAM with thickness 6 mm or above.

### 10.3.6.1 Cutting and Flaring the Piping

1 Please cut using pipe cutter and then remove the burrs.
2 Remove the burrs by using reamer. If burrs is not removed, gas leakage may be caused. Turn the piping end down to avoid the metal powder entering the pipe.
3 Please make flare after inserting the flare nut onto the copper pipes.

1. To cut

2. To remove burrs
 3. To flare

When properly flared, the internal surface of the flare will evenly shine and be of even thickness. Since the flare part comes into contact with the connections, carefully check the flare finish.

## 11. Operation Control

### 11.1 Heating Operation

- Heating operation can be set using remote control.
- This operation is applied to warm the room temperature reaches the setting temperature set on the remote control.
- The remote control setting temperature, which takes the reading of intake air temperature sensor, can be adjusted from $16^{\circ} \mathrm{C}$ to $30^{\circ} \mathrm{C}$.
- During heating operation, the compressor will stop running and restart as shown in below figure.

### 11.1.1 Heating Operation Time Diagram

### 11.2 Cooling Operation

- Cooling operation can be set using remote control.
- This operation is applied to cool down the room temperature to the setting temperature set on the remote control.
- The remote control setting temperature, which takes the reading of intake air temperature sensor, can be adjusted from $16^{\circ} \mathrm{C}$ to $30^{\circ} \mathrm{C}$.
- During cooling operation, the compressor will stop and restart as shown in figure below:

Intake air
temperature

### 11.2.1 Cooling Operation Time Diagram

## <Description of operation>

$\mathrm{d}-\mathrm{g} \quad:$ restart control (waiting for 3 min. )
$a-b, g-h, o-p \quad: 60 \mathrm{sec}$. Forcible operation.
$h-0 \quad: 7 \mathrm{~min}$. time save control.
$q-t \quad:$ freeze prevention control.
$\mathrm{v}-\mathrm{y} \quad$ : outdoor fan control.

### 11.3 Automatic Operation

- Automatic operation can be set using remote control.
- This operation starts to operate with indoor fan at SLo speed for 25 seconds to judge the intake air temperature.
- After judged the temperature, the operation mode is determined by referring to the below standard.

| $\uparrow$ <br> Intake Air <br> Temperature | $23^{\circ} \mathrm{C}$ \& Above | Cooling Operation |
| :---: | :---: | :---: |
|  | Below $20^{\circ} \mathrm{C}$ | Heating Operation |

- Then, the unit starts to operate at determined operation mode, until it is switched off using remote control, with the setting temperature as shown in table below.

|  | Setting Temperature (Standard) |
| :---: | :---: |
| Cooling Operation | $25^{\circ} \mathrm{C}$ |
| Heating Operation | $21^{\circ} \mathrm{C}$ |

- Operation mode will be determine again for judgement after 1 hour of operation, if the room temperature reaches to set temperature and compressor off time is over 7 minutes 30 seconds continuously.
* The present operation mode will be continued, if the room temperature does not reach to set temperature (Compressor keeps running) eventhough after 1 hour from automatic operation mode started.

| Standard for Determining Operation Mode 2nd Judgement onwards |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Present Mode | Judgement |  | Next Mode |  |
|  |  |  | Cooling | Heating |
| Cooling | $23^{\circ} \mathrm{C}$ | Cooling <br> Heating | 0 <br> (Judgement: <br> $23^{\circ} \mathrm{C}$ \& Above) | 0 <br> (Judgement: <br> Below $23^{\circ} \mathrm{C}$ ) |
| Heating | $25^{\circ} \mathrm{C}$ | Cooling <br> Heating | 0 (Judgement: $25^{\circ} \mathrm{C}$ \& Above) | 0 <br> (Judgement: Below $25^{\circ} \mathrm{C}$ ) |

- Automatic Set Temperature

For each operation, set temperature will automatically set as shown below.

- The setting temperature for all the operations can be changed one level up or one level down from the standard temperature as shown in below table by pressing on the temperature up or temperature down button at remote control.

| Operation | Hi | (Standard) | Lo |
| :---: | :---: | :---: | :---: |
|  | $\left(+2^{\circ} \mathrm{C}\right)$ | $\left( \pm 0^{\circ} \mathrm{C}\right)$ | $\left(-2^{\circ} \mathrm{C}\right)$ |
| Cooling | $27^{\circ} \mathrm{C}$ | $25^{\circ} \mathrm{C}$ | $23^{\circ} \mathrm{C}$ |
| Heating | $23^{\circ} \mathrm{C}$ | $21^{\circ} \mathrm{C}$ | $19^{\circ} \mathrm{C}$ |

- The operation mode judging temperature and standard setting temperature can be increased by $2^{\circ} \mathrm{C}$ permanently, by open the circuit of JX03 at indoor unit's printed circuit board.

| $\uparrow$ <br> Intake Air <br> Temperature | $25^{\circ} \mathrm{C}$ \& Above | Cooling Operation |
| :---: | :---: | :---: |
|  | Below $22^{\circ} \mathrm{C}$ | Heating Operation |

|  | Setting Temperature (Standard) |
| :---: | :---: |
| Cooling Operation | $27^{\circ} \mathrm{C}$ |
| Heating Operation | $23^{\circ} \mathrm{C}$ |

### 11.4 Indoor Fan Speed Control

- Indoor fan speed can be set using remote control.

### 11.4.1 Fan Speed Rotation Chart

| Speed | CS-YA18NKS | CS-YA24NKS |
| :---: | :---: | :---: |
| SHi | 1310 | 1530 |
| Hi | 1240 | 1390 |
| Me | 1100 | 1220 |
| HLo | 1060 | 1180 |
| CLo | 1000 | 1100 |
| Lo- | 820 | 910 |
| SLo | 630 | 700 |
| SSLo | 300 | 300 |

### 11.4.2 Automatic Fan Speed Control

- When set to Auto Fan Speed, the fan speed is adjusted between maximum and minimum setting as shown in the table.
- Fan speed rotates in the range of $\mathrm{Hi}, \mathrm{Me}$ and Lo-.
- Deodorizing Control will be activated.

| Speed Mode |  |  |  | SHi | Hi | Me | HLo | CLo | Lo- | SLo | SSLo | Stop |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { 우 } \\ & \text { 으 } \\ & 0 \end{aligned}$ | Normal | Manual | Hi |  | o |  |  |  |  |  |  |  |
|  |  |  | Me |  |  | O |  |  |  |  |  |  |
|  |  |  | Lo |  |  |  |  | 0 |  |  |  |  |
|  |  | Auto |  |  | 0 | o |  |  | 0 |  |  | 0 |
| $\begin{aligned} & \text { O) } \\ & \text { 든 } \\ & \text { © } \\ & \text { © } \end{aligned}$ | Normal | Manual | Hi | o |  |  |  |  | - | $\bigcirc$ | 0 | $\bigcirc$ |
|  |  |  | Me |  |  | 0 |  |  | O | 0 | 0 | 0 |
|  |  |  | Lo |  |  |  | 0 |  | 0 | 0 | 0 | 0 |
|  |  | Auto |  |  |  | 0 | 0 |  | 0 | 0 | 0 | 0 |
| Auto Mode Judgment |  |  |  |  |  |  |  |  |  | 0 |  |  |

- Auto Fan Speed during cooling operation:

1 Indoor fan will rotate alternately between off and on as shown in below diagram.
2 At the beginning of each compressor starts operation, indoor fan speed increases gradually for deodorizing purpose.
3 For the first time the compressor operates, indoor fan will be switched to Hi fan speed from Lo- after 70 seconds from the start of compressor. This cause the room temperature to achieve the setting temperature quickly.
4 During compressor stops, indoor fan will operate at Lo- for the beginning 20 seconds to prevent higher volume of refrigerant in liquid form returning to the compressor.
5 After the compressor turned off for 3 minutes, indoor fan will start to operate at Lo- to circulate the air in the room. This is to obtain the actual reading of the intake air temperature.

6 For the resume of compressor operation, indoor fan will operate at Me fan speed to provide comfort and lesser noise environment, after 70 seconds from the restarts of compressor.

※ 1 Fan Speed is Hi until the compressor stops (when the room temperature reaches setting temperature).
※ 2 Fan Speed is Me after the compressor restarts.

- Auto Fan Speed during Heating operation.
- Indoor fan will rotate in the range of SLo $\rightarrow$ Me according to the heat exchanger temperature.

### 11.4.3 Manual Fan Speed Control

- Manual fan speed adjustment can be carried out by using the Fan Speed selection button at the remote control.
- There are 3 types of fan speed settings: Lo, Me, Hi.

### 11.5 Outdoor Fan Speed Control

- There is 2 speeds for outdoor fan motor. Outdoor fan speed can be changed to Hi or Lo according to outdoor temperature.
- For Cooling operation, when outdoor temperature reaches to $31^{\circ} \mathrm{C}$ (Hi-speed), $29^{\circ} \mathrm{C}$ (Lo-speed).
- For heating operation, when outdoor temperature reaches to $13.5^{\circ} \mathrm{C}$ (Hi-speed), $15.5^{\circ} \mathrm{C}$ (Lo-speed).
- When air conditioner is turned on, the compressor and the outdoor fan will operate simultaneously.
- Likewise, both compressor and outdoor fan will stop at the same time if the unit is turned off.

### 11.6 Vertical Airflow Direction Control

### 11.6.1 Auto Control

(Cooling Operation Condition)

- When the vertical airflow direction is set to Auto using the remote control, the louver swings up and down as shown in the diagram.
- When stops operation using the remote control, the discharge vent is reset and stops at the closing position.
- During Cooling operation, indoor fan motor may stop to rotate at certain periods. At that condition, the louver will stop swinging.

## (Heating Operation Condition)

- When the piping air temperature reaches $38^{\circ} \mathrm{C}$, the louver is changed from upper to lower limit. When the piping air temperature falls $35^{\circ} \mathrm{C}$, the louver is changed from lower to upper limit.

### 11.6.2 Manual Control

- When the vertical airflow direction is set to Manual using the remote control, the automatic airflow is released and the airflow direction louver move up and down in the range shown in the diagram.
- The louver can be adjusted by pressing the button to the desired louver position.
- When stop operation using the remote control, the discharge vent is reset, and stop at the closing position.

## (Cooling Operation Condition)

## (Heating Operation Condition)

### 11.7 Horizontal Airflow Direction Control

- The horizontal airflow direction louvers can be adjusted manually by hand.

### 11.8 Timer Control

### 11.8.1 To Set the Timer

- To turn ON the unit at a preset time, set the timer while the unit is OFF (the operation will start 15 minutes early before the preset time).
- To turn OFF the unit at a delayed time, set the timer while the unit is ON.

$$
\begin{aligned}
& \text { Press twice } \rightarrow \text { Press repeatedly to set your desired time } \\
& \text { TIMER } \quad \mathrm{HR} \rightarrow 1 \mathrm{HR} \rightarrow 2 H R \rightarrow \ldots \rightarrow 12 H R
\end{aligned}
$$

- Once the timer is set, the TIMER indication on the remote control display will be shown.
- To check the remaining time before the timer takes effect, press ${ }^{\text {TTMER }}$.
- To cancel the timer, press $\stackrel{\text { TMER }}{ }$ once, then press again and hold for approximately 3 seconds.
- The timer will also be canceled when you press ${ }^{\text {offono }}$ or when power failure occurs.
- This setting is for one time operation, you will need to set again each time you want to use the timer.

### 11.9 Random Auto Restart Control

- If there is a power failure during operation, the air conditioner will automatically restart after 3 to 4 minutes when the power is resumed.
- It will start with previous operation mode and airflow direction.
- If there are more than one air conditioner unit in operation and power failure occur, restart time for each unit to operate will be decided randomly using 4 parameters:- intake air temperature, setting temperature, fan speed and air swing louver position.
- This Random Auto Restart Control is not available when Timer is set.
- This control can be omitted by open the circuit of JX02 at indoor unit printed circuit board.

### 11.10 Remote Control Signal Receiving Sound

- Short beep sound will be heard when turn ON the air conditioner or enabling other operations.
- Long beep sound will be heard when turn OFF the air conditioner or disabling other operations.

## 12. Protection Control

(For 12.1 to 12.7 information applies only to Cooling Operation)

### 12.1 Restart Control (Time Delay Safety Control)

- When the thermo-off temperature (temperature which compressor stops to operate) is reached during:-- Cooling operation - the compressor stops for 3 minutes (minimum) before resume operation.
- If the operation is stopped by the remote control, the compressor will not turn on within 3 minutes from the moment operation stop, although the unit is turn on again within the period.
- This phenomenon is to balance the pressure inside the refrigerant cycle.

### 12.2 7 Minutes Time Save Control

- The compressor will start automatically if it has stopped for 7 minutes and the intake air temperature falls between the compressor ON temperature and compressor OFF temperature during the period.
- This phenomenon is to reduce the built up humidity inside a room.

### 12.3 60 Seconds Forced Operation

- Once the air conditioner is turned on, the compressor will not stop within 60 seconds in a normal operation although the intake air temperature has reached the thermo-off temperature. However, force stop by pressing the OFF/ON operation button at the remote control is permitted.
- The reason for the compressor to force operate at minimum 60 seconds is to allow the refrigerant oil run in a full cycle and return back to the outdoor unit.

### 12.4 Starting Current Control

- When the compressor, outdoor fan motor and indoor fan motor are simultaneously started, the indoor fan motor will start to operate at 1.6 second later.
- The reason of the difference is to reduce the starting current flow.

### 12.5 Freeze Prevention Control

- If the temperature of the indoor heat exchanger falls below $2^{\circ} \mathrm{C}$ continuously for 4 minutes or more, the compressor turns off.
The fan speed setting remains the same.
- This phenomenon is to protect the indoor heat exchanger from freezing and to prevent higher volume of refrigerant in liquid form returning to the compressor.
- Compressor will restart again when the indoor heat exchanger temperature rises to $10^{\circ} \mathrm{C}$ (Recovery).
- Restart control (Time Delay Safety Control) will be applied in this Control if the recovery time is too short.

### 12.6 Compressor Reverse Rotation Protection Control

- If the compressor is operating continuously for 5 minutes or longer and the temperature difference between intake air and indoor heat exchanger is $2.5^{\circ} \mathrm{C}$ or less for continuous 2 minutes, compressor will stop and restart automatically.
- Time Delay Safety Control is activated before the compressor restart.

s T = Intake air temperature - Indoor heat exchanger temperature
- This is to prevent compressor from rotate reversely when there is an instantaneous power failure.

### 12.7 Dew Prevention Control

- To prevent dew formation at indoor unit discharge area.
- This control starts if:
- Cooling mode is activated.
- Remote Control setting temperature is less than $25^{\circ} \mathrm{C}$.
- Fan speed is at Lo.
- Room temperature is constant $\left( \pm 1^{\circ} \mathrm{C}\right)$ for 30 minutes.
- Compressor is continuously running.
- Fan speed, will be adjusted accordingly in this control.
- Fan speed will be increased slowly.
- Dew prevention stop condition
- Remote control setting temperature is more than $25^{\circ} \mathrm{C}$.
- Fan speed is not set to Lo.
(For 12.8 to $\mathbf{1 2 . 1 4}$ information applies only to Heating Operation)

### 12.8 Restart Control (Time Delay Safety Control)

- When the thermo-off temperature (temperature which compressor stops to operate) is reached during:-- Heating operation - the compressor stops for 3 minutes (minimum) before resume operation.
- If the operation is stopped by the remote control, the compressor will not turn on within 3 minutes from the moment operation stop, although the unit is turn on again within the period.
- This phenomenon is to balance the pressure inside the refrigerant cycle.

### 12.9 Compressor Reverse Rotation Protection Control

- If the compressor is operating continuously for 5 minutes or longer and the temperature difference between indoor heat exchanger and intake air is $5^{\circ} \mathrm{C}$ or less for continuous 2 minutes, compressor will stop and restart automatically.
- Time Delay Safety Control is activated before the compressor restart.

$\mathrm{s} T=$ Indoor heat exchanger temperature - Intake air temperature
- This is to prevent compressor from rotate reversely when there is an instantaneous power failure.

### 12.10 Overload Protection Control

- Outdoor Fan Control
- If the temperature of the Outdoor Heat Exchanger less than $-3^{\circ} \mathrm{C}$, Outdoor Fan is ON. The Outdoor Fan stop, when Outdoor Heat Exchanger temperature is Tb or more according to Outdoor Air Temperature region as table below:
The Outdoor Fan restarts when the indoor heat exchanger temperature falls to $49^{\circ} \mathrm{C}$.

| Outdoor Air <br> Temperature | $<10^{\circ} \mathrm{C}$ | $\geq 10^{\circ} \mathrm{C} \sim<15^{\circ} \mathrm{C}$ | $\geq 5^{\circ} \mathrm{C} \sim<20^{\circ} \mathrm{C}$ | $\geq 20^{\circ} \mathrm{C} \sim<25^{\circ} \mathrm{C}$ | $\geq 25^{\circ} \mathrm{C}$ | Outdoor Fan <br> OFF |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Tb | $\geq 5^{\circ} \mathrm{C}$ | $\geq 3^{\circ} \mathrm{C}$ | $\geq 1.5^{\circ} \mathrm{C}$ | $\geq 0.5^{\circ} \mathrm{C}$ | $\geq 0.5^{\circ} \mathrm{C}$ |  |

During starting of Heating mode and after deice, Outdoor Fan ON for 90 sec . (Hi).

- Compressor High Pressure Control
- If the indoor heat exchanger becomes $68^{\circ} \mathrm{C}$ or more, the compressor will stop and restart automatically.
- Time Delay Safety Control is activated before the compressor restart.

### 12.11 4-Way Valve Control

- 4-way valve always on during Heating operation. (except deicing operation)
- When the unit is switched off by remote control during Heating operation, the 4-way valve stay at Heating position for 5 minutes.
- This is to prevent the refrigerant flow process sound for being occur.

### 12.12 Hot Start Control

- Hot Start Control is to prevent cool air discharge into the room when heating operation start.
- When Heating operation starts, Indoor fan will not start until the indoor heat exchanger reaches $30^{\circ} \mathrm{C}$ as diagram shown.

Indoor heat
exchanger
temperature

- Hot start is completed when indoor heat exchanger rises to $42^{\circ} \mathrm{C}$ or operation over 4 minutes.

### 12.13 Cold Draft Prevention Control

When COMP = Thermal OFF, indoor fan speed immediately changed to $\mathrm{Lo}^{-}$for 30 sec., follow by SSLo speed until COMP $=\mathrm{ON}$.

### 12.14 Deice Control

Deice starts to prevent frosting at outdoor heat exchanger.

- Normal Deice

Deice operation detection commences in Heating operation starts or 60 minutes after previous deice operation. If the outdoor piping temperature drops to $-4^{\circ} \mathrm{C}$ for 50 sec . continuously during compressor is in operation, deice will start.
(There is no detection during Outdoor Fan stops.)

- Overload Deice
- During heating operation, if the outdoor Fan OFF duration (due to overload protection control) is accumulated up to 60 minutes and after compressor starts for 1 minute, deice starts.
- Deice ends when
(a) 12 minutes after deicing operation starts;
(b) The outdoor piping temperature rises to about $12^{\circ} \mathrm{C}$.
- After deice operation, compressor stops for 30 seconds and 4-way valve stays at cooling position for 10 seconds.

b) Overload Deice Time Diagram

$m-r$ : Overload control
$\mathrm{g}-\mathrm{i}$ : Preparation for overload deicing (For normal R22 control, operation for $\mathrm{g}-\mathrm{i}$ is not included, applicable only for new refrigerant model).

## 13. Servicing Mode

### 13.1 Auto OFF/ON Button

1 AUTO OPERATION MODE
The Auto Operation will be activated immediately once the Auto OFF/ON button is pressed. This operation can be used to operate air conditioner with limited function if remote control is misplaced or malfunction.

2 TEST RUN OPERATION (FOR PUMP DOWN/SERVICING PURPOSE)
The Test Run Operation will be activated if the Auto OFF/ON button is pressed continuously for more than 5 seconds. A "beep" sound will be heard at the fifth seconds, in order to identify the starting of this operation.

3 VARIOUS SETTING MODE
The Various Setting Mode will be activated if (within 20 seconds of Test Run Operation) the Auto OFF/ON button is pressed for more than 5 seconds. 2 "beep" sounds will be heard to identify the starting of this operation.
Under Various Setting Mode, user could perform the following operation:
i. Press Auto OFF/ON button to toggle remote control receiving sound.

- Short "beep": Turn ON remote control receiving sound.
- Long "beep": Turn OFF remote control receiving sound.

After Auto OFF/ON button is pressed, the 20 seconds counter for Remote Control Receiving Sound OFF/ON Mode is restarted.

### 13.2 Remote Control Number Switch

- There are 2 types of remote control transmission code could be selected and stored in EEPROM of indoor unit. The indoor unit will only operate when received signal with same transmission code from remote control. This could prevent signal interference when there are 2 indoor units installed nearby together.
- To change remote control transmission code, short or open jumpers at the remote control printed circuit board.

- During unit is OFF (remote control OFF indicator is shown), after select the transmission code combination of remote control, press OFF/ON button for 20 seconds at remote control to transmit and store the desired transmission code to the EEPROM.

## 14. Troubleshooting Guide

### 14.1 Refrigeration cycle system

In order to diagnose malfunctions, make sure that there are no electrical problems before inspecting the refrigeration cycle. Such problems include insufficient insulation, problem with the power source, malfunction of a compressor and a fan. The normal outlet air temperature and pressure of the refrigeration cycle depends on various conditions, the standard values for them are shown in the table on the right.

Normal Pressure and Outlet Air Temperature (Standard)

|  | Gas Pressure <br> Mpa <br> $\left(\mathrm{kg} / \mathrm{cm}^{2} \mathrm{G}\right)$ | Outlet air <br> Temperature <br> $\left({ }^{\circ} \mathrm{C}\right)$ |
| :---: | :---: | :---: |
| Cooling Mode | $0.4 \sim 0.6(4 \sim 6)$ | $12 \sim 16$ |
| Heating Mode | $1.5 \sim 2.1(15 \sim 21)$ | $36 \sim 45$ |

Condition: Indoor fan speed = High
Outdoor temperature $35^{\circ} \mathrm{C}$ at the cooling mode and $7^{\circ} \mathrm{C}$ at the heating mode

### 14.1.1 Relationship between the condition of the air conditioner and pressure and electric current

| Condition of the air conditioner | Cooling Mode |  |  | Heating Mode |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Low Pressure | High Pressure | Electric current during operation | Low Pressure | High Pressure | Electric current during operation |
| Insufficient refrigerant (gas leakage) | צ | צ | צ | צ | צ | צ |
| Clogged capillary tube or strainer | צ | צ | צ | צ | צ | צ |
| Short circuit in the indoor unit | $y$ | y | צ | $\pi$ | $\pi$ | $\pi$ |
| Heat radiation deficiency of the outdoor unit | $\pi$ | $\pi$ | $\pi$ | צ | צ | צ |
| Inefficient compression | $\pi$ | y | צ | $\lambda$ | צ | צ |

- Carry out the measurement of pressure, electric current, and temperature fifteen minutes after an operation is started.

### 14.1.2 Diagnosis methods of a malfunction of a compressor and 4-way Valve

| Nature of fault |  |
| :---: | :--- |
| Insufficient compressing of a compressor | - Electric current during operation becomes approximately $20 \%$ lower than the normal value. <br> - The discharge tube of the compressor becomes abnormally hot (normally $70^{\circ} \mathrm{C}$ to $90^{\circ} \mathrm{C}$ ). <br> - The different between high pressure and low pressure becomes almost zero. |
| Locked compressor | - Electric current reaches a high level abnormally, and the value exceeds the limit of an <br> ammeter. In some cases, a breaker turns off. |
| Insufficient switches of the 4-way valve | - The compressor has a humming sound. |
| - The temperature different between from the discharge tube to the 4 -way valve and from |  |
| suction tube to the 4-way valve becomes almost zero. |  |

## 15. Disassembly and Assembly Instructions

## WARNING

High Voltage is generated in the electrical parts area by the capacitor. Ensure that the capacitor has discharged sufficiently before proceeding with repair work. Failure to heed this caution may result in electric shocks.

### 15.1 Indoor Electronic Controllers, Cross Flow Fan and Indoor Fan Motor Removal Procedures
