⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

1 Safety Precaution

1.1. General Guidelines

1. IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by

⚠ in the Schematic Diagrams, Circuit Board Layout, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent X-RADIATION, shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

2. An Isolation Transformer should always be used during the servicing of AC Adaptor whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks. It will also protect AC Adaptor from being damaged by accidental shorting that may occur during servicing.
3. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
4. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
5. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

1.2. Leakage Current Cold Check

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between $1\text{ M}\Omega$ and $5.2\text{ M}\Omega$. When the exposed metal does not have a return path to the chassis, the reading must be infinity.

1.3. Leakage Current Hot Check (See Figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a $1.5\text{ k}\Omega$, 10 W resistor, in parallel with a $0.15\text{ }\mu\text{F}$ capacitor, between each exposed metallic part on the set and a good earth ground, as shown in Figure 1.
3. Use an AC voltmeter, with $1\text{ k}\Omega/\text{V}$ or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 V RMS . A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed $1/2\text{ mA}$. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

Hot-Check Circuit

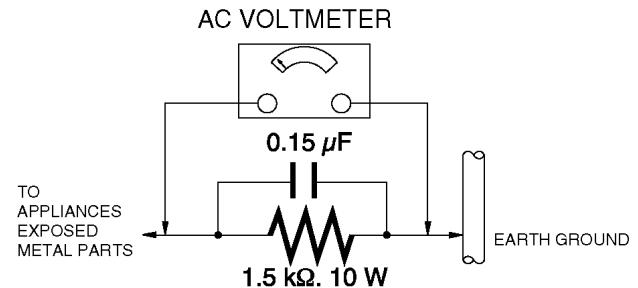

Figure. 1

1.4. How to Discharge the Capacitor on Sub PCB

CAUTION:

1. Be sure to discharge the capacitor on SUB PCB.
2. Be careful of the high voltage circuit on SUB PCB when servicing.

[Discharging Procedure]

1. Refer to the disassemble procedure and Remove the necessary parts/unit.
2. Put the insulation tube onto the lead part of Resistor (ERG5SJ102:1kΩ /5W).
(an equivalent type of resistor may be used.)
3. Put the resistor between both terminals of capacitor on SUB PCB for approx. 5 seconds.
4. After discharging confirm that the capacitor voltage is lower than 10V using a voltmeter.

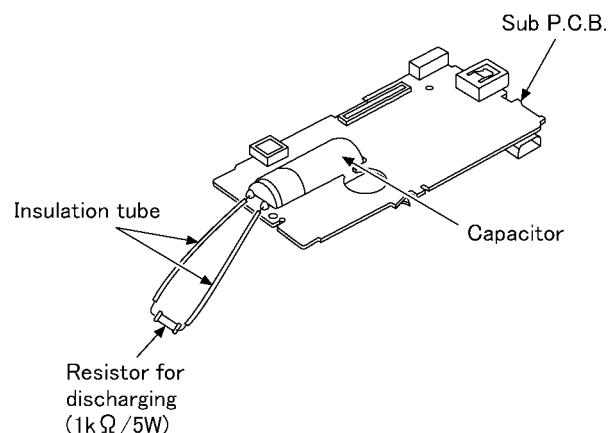

Fig. F1

2 Warning

2.1. Prevention of Electrostatic Discharge (ESD) to Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by electrostatic discharge (ESD).

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an antistatic solder removal device. Some solder removal devices not classified as "antistatic (ESD protected)" can generate electrical charge sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION :

Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity (ESD) sufficient to damage an ES device).

2.2. How to Recycle the Lithium Ion Battery (U.S. Only)

ENGLISH

A lithium ion/polymer battery that is recyclable powers the product you have purchased. Please call 1-800-8-BATTERY for information on how to recycle this battery.

FRANÇAIS

L'appareil que vous vous êtes procuré est alimenté par une batterie au lithium-ion/polymère recyclable. Pour des renseignements sur le recyclage de la batterie, veuillez composer le 1-800-8-BATTERY.

2.3. Caution for AC Cord (For EB/GC/SG)

2.3.1. Information for Your Safety

IMPORTANT

Your attention is drawn to the fact that recording of pre-recorded tapes or discs or other published or broadcast material may infringe copyright laws.

WARNING

To reduce the risk of fire or shock hazard, do not expose this equipment to rain or moisture.

CAUTION

To reduce the risk of fire or shock hazard and annoying interference, use the recommended accessories only.

FOR YOUR SAFETY

DO NOT REMOVE THE OUTER COVER

To prevent electric shock, do not remove the cover. No user serviceable parts inside. Refer servicing to qualified service personnel.

2.3.2. Caution for AC Mains Lead

For your safety, please read the following text carefully.

This appliance is supplied with a moulded three-pin mains plug for your safety and convenience.

A 5-ampere fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 5 amperes and it is approved by ASTA or BSI to BS1362

Check for the ASTA mark or the BSI mark on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover, the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local Panasonic Dealer.

If the fitted moulded plug is unsuitable for the socket outlet in your home then the fuse should be removed and the plug cut off and disposed of safely.

There is a danger of severe electrical shock if the cut off plug is inserted into any 13-ampere socket.

If a new plug is to be fitted please observe the wiring code as shown below.

If in any doubt, please consult a qualified electrician.

2.3.2.1. Important

The wires in this mains lead are coloured in accordance with the following code:

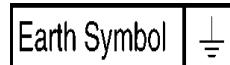

Blue	Neutral
Brown	Live

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured BLUE must be connected to the terminal in the plug which is marked with the letter N or coloured BLACK.

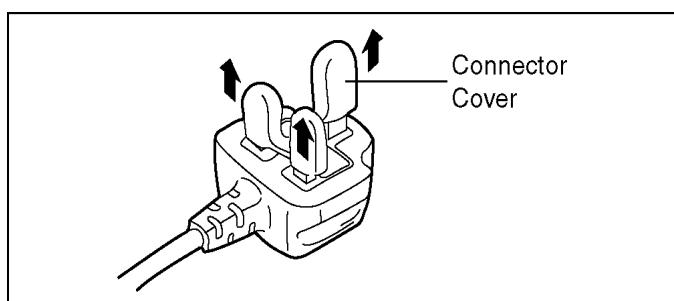

The wire which is coloured BROWN must be connected to the terminal in the plug which is marked with the letter L or coloured RED.

Under no circumstances should either of these wires be connected to the earth terminal of the three pin plug, marked with the letter E or the Earth Symbol.

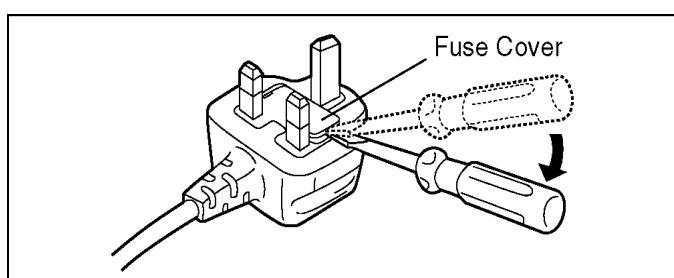

2.3.2.2. Before Use

Remove the Connector Cover as follows.

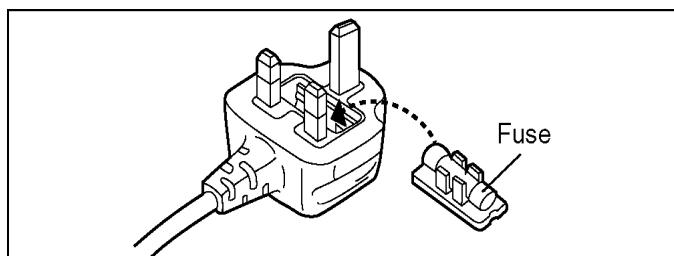

2.3.2.3. How to Replace the Fuse

1. Remove the Fuse Cover with a screwdriver.

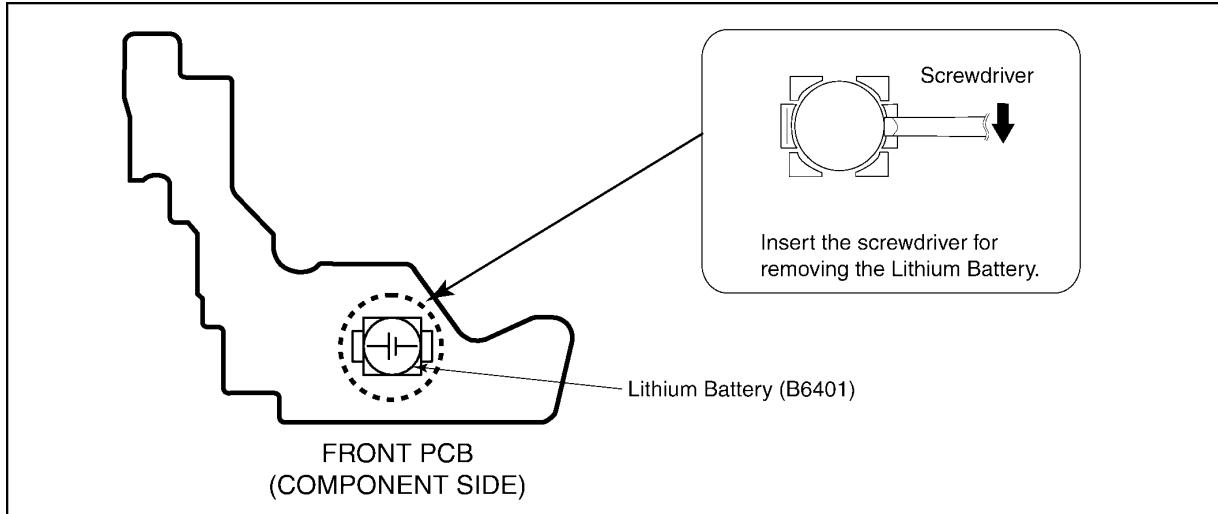

2. Replace the fuse and attach the Fuse cover.

2.4. How to Replace the Lithium Battery

2.4.1. Replacement Procedure

1. Remove the Front PCB. (Refer to Disassembly Procedures.)
2. Remove the Lithium battery (Ref. No. "B6401" at component side of Front PCB) and then replace it into new one.

NOTE:

This Lithium battery is a critical component.

(Type No.: ML-614S/ZTK Manufactured by Energy Company, Panasonic Corporation)

It must never be subjected to excessive heat or discharge.

It must therefore only be fitted in requirement designed specifically for its use.

Replacement batteries must be of same type and manufacture.

They must be fitted in the same manner and location as the original battery, with the correct polarity contacts observed.

Do not attempt to re-charge the old battery or re-use it for any other purpose.

It should be disposed of in waste products destined for burial rather than incineration.

(For English)

CAUTION

Danger of explosion if battery is incorrectly replaced.

Replace only with the same or equivalent type recommended by the manufacturer.

Dispose of used batteries according to the manufacturer's instructions.

(For German)

ACHTUNG

Explosionsgefahr bei falschem Anbringen der Batterie. Ersetzen Sie nur mit einem äquivalentem vom Hersteller empfohlenem Typ.

Behandeln Sie gebrauchte Batterien nach den Anweisungen des Herstellers.

(For French)

MISE EN GARDE

Une batterie de remplacement inappropriée peut exploser. Ne remplacez qu'avec une batterie identique ou d'un type recommandé par le fabricant. L'élimination des batteries usées doit être faite conformément aux instructions du manufacturier.

NOTE:

Above caution is applicable for a battery pack which is for HDC-HS250/HS200 series, as well.

1. Battery Pack for this model.

2. Button-type battery for Remote controller (CR2025: Being supplied from Energy Company, Panasonic Corporation)

3 Service Navigation

3.1. Introduction

This service manual contains technical information, which allow service personnel's to understand and service this model. Please place orders using the parts list and not the drawing reference numbers. If the circuit is changed or modified, the information will be followed by service manual to be controlled with original service manual.

3.2. General Description About Lead Free Solder (PbF)

The lead free solder has been used in the mounting process of all electrical components on the printed circuit boards used for this equipment in considering the globally environmental conservation.

The normal solder is the alloy of tin (Sn) and lead (Pb). On the other hand, the lead free solder is the alloy mainly consists of tin (Sn), silver (Ag) and Copper (Cu), and the melting point of the lead free solder is higher approx.30°C (86°F) more than that of the normal solder.

Distinction of PCB Lead Free Solder being used

The letter of "PbF" is printed either foil side or components side on the PCB using the lead free solder.(See right figure)

PbF

Service caution for repair work using Lead Free Solder (PbF)

- The lead free solder has to be used when repairing the equipment for which the lead free solder is used.
(Definition: The letter of "PbF" is printed on the PCB using the lead free solder.)
- To put lead free solder, it should be well molten and mixed with the original lead free solder.
- Remove the remaining lead free solder on the PCB cleanly for soldering of the new IC.
- Since the melting point of the lead free solder is higher than that of the normal lead solder, it takes the longer time to melt the lead free solder.
- Use the soldering iron (more than 70W) equipped with the temperature control after setting the temperature at $350\pm30^\circ\text{C}$ ($662\pm86^\circ\text{F}$).

Recommended Lead Free Solder (Service Parts Route.)

- The following 3 types of lead free solder are available through the service parts route.
RFKZ03D01K-----(0.3mm 100g Reel)
RFKZ06D01K-----(0.6mm 100g Reel)
RFKZ10D01K-----(1.0mm 100g Reel)

Note

* Ingredient: tin (Sn) 96.5%, silver (Ag) 3.0%, Copper (Cu) 0.5%, Cobalt (Co) / Germanium (Ge) 0.1 to 0.3%

3.3. Important Notice 1:(Other than U.S.A. and Canadian Market)

1. The service manual does not contain the following information, because of the impossibility of servicing at component level without concerned equipment/facilities.

- a. Schematic diagram, Block Diagram and PCB layout of MAIN PCB.
- b. Parts list for individual parts for MAIN PCB.

When a part replacement is required for repairing MAIN PCB, replace as an assembled parts. (Main PCB)

2. The following category is /are recycle module part. Please send it/them to Central Repair Center.

- MAIN PCB (VEP03H66Q : HDC-HS250P/PC)
- MAIN PCB (VEP03H66R : HDC-HS250PU)
- MAIN PCB (VEP03H66V : HDC-HS200EB)
- MAIN PCB (VEP03H66T : HDC-HS200EC/EG)
- MAIN PCB (VEP03H66Y: HDC-HS200EE)
- MAIN PCB (VEP03H66U : HDC-HS200EP)
- MAIN PCB (VEP03H66W: HDC-HS200GC/SG)
- MAIN PCB (VEP03H66X: HDC-HS200GJ)
- MAIN PCB (VEP03H66AB: HDC-HS200GK)
- MAIN PCB (VEP03H66AA: HDC-HS200GN)
- MAIN PCB (VEP03H66S: HDC-HS200GT)

3.4. How to Define the Model Suffix (NTSC or PAL model)

There are eight kinds of HDC-HS250/HS200.

- a) HDC-HS200S
- b) HDC-HS250P
- c) HDC-HS250PC
- d) HDC-HS200EB/EC/EG/EP/GN
- e) HDC-HS200EE
- f) HDC-HS200GK
- g) HDC-HS200GT
- h) HDC-HS200GC/GJ/SG, HS250PU

(HDC-HS200S is exclusively Japan domestic model.)

What is the difference is that the "INITIAL SETTING" data which is stored in Flash ROM mounted on Main PCB.

3.4.1. Defining methods:

To define the model suffix to be serviced, refer to the rating label which is putted on the Unit.

a) HDC-HS200S

HDC-HS200S is exclusively Japan domestic model.

b) HDC-HS250P

The nameplate for this model show the following Safety registration mark.

c) HDC-HS250PC

The nameplate for this model show the following Safety registration mark.

d) HDC-HS200EB/EC/EG/EP/GN

The nameplate for these models show the following Safety registration mark.

e) HDC-HS200EE

The nameplate for this model show the following Safety registration mark.

f) HDC-HS200GK

The nameplate for this model show the following Safety registration mark.

g) HDC-HS200GT

The nameplate for this model show the following Safety registration mark.

h) HDC-HS200GC/GJ/SG, HS250PU

The nameplate for these models do not show any above Safety registration mark.

NOTE:

After replacing the MAIN PCB, be sure to achieve adjustment.

The adjustment instruction is available at "software download" on the "Support Information from NWBG/VDBG-AVC" web-site in "TSN system", together with Maintenance software.

3.5. Precautions for Handling HDD

1. Handle HDD very carefully to prevent the static electricity and shock.
2. Set the HDD quickly after taking it out from the package. Make sure to put the HDD on buffer materials, etc.

3.5.1. Precautions at incoming process and for opening packages

Preventing shock	<ul style="list-style-type: none"> • Do not throw down HDD from luggage carrier or avoid dropping accidentally when unloading. The HDD may not be reliable when impacts of dropping, throwing or rolling occur. • Avoid HDD hitting other equipment or other HDD. Hold HDD firmly but do not apply excessive force when taking out from the package because it is particulars slippery. • When taking out HDD from the package, make sure to put buffer materials such as conductive urethane materials on a work table. Also, a stable place is recommended to avoid impacts or vibration.
Preventing condensation	<ul style="list-style-type: none"> • To prevent dew condensation on HDD due to sharp temperature change, keep it indoors without unpacking, and adjust the package of HDD to room temperature completely before unpacking. • Avoid entrance or window areas where temperature changes easily for storage.
Holding example	<p>• Take out HDD holding both sides, not to press the top cover and the center of the device label.</p> <p>The diagram illustrates the correct and incorrect ways to handle an HDD. On the left, under '<OK>', two hands are shown holding the edges of an HDD, avoiding the top cover and center. An arrow points to the right, where the text 'Don't drop!' is written above four illustrations of incorrect handling: 1) pressing the top cover, 2) holding only one side, 3) holding the center, and 4) dropping the HDD from a height.</p>
Preventing static electricity	<ul style="list-style-type: none"> • After opening package, HDD must be handled only by a specified worker in E.S.D.* free environment on a conductive mat. It may cause damage on HDD components due to overvoltage such as electrostatic discharge, etc.

*E.S.D. = Electrostatically Sensitive Devices

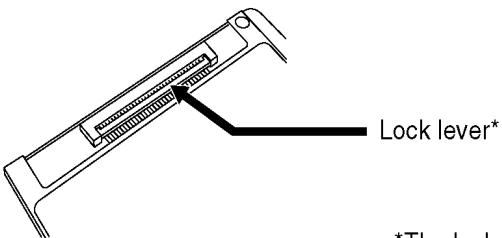

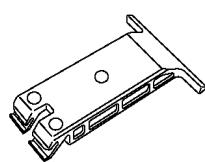

3.5.2. Precautions for installing HDD

Preventing static electricity	<ul style="list-style-type: none"> HDD may be destroyed by static electricity charged to clothes or human body. Place a conductive mat with removed earthing and use the wrist strap to prevent static charge. <p><OK></p> <p><OK></p>
Preventing shock	<ul style="list-style-type: none"> Place HDD with its face upward (the device label upward) on the flat and stable surface using buffer materials, etc. Do not stand HDD. If it falls down, the excessive impacts may damage HDD. Do not store or carry HDD close to other HDD or other components. The components may be distorted due to impacts or weight, which may result in the performance deterioration of the HDD. Do not put HDD in the working area. Do not put HDD close to industrial tools in particular or temporarily put it on the floor. Be extremely careful not to drop HDD when working on it because even dropping HDD down on the work table with a mat on it may cause damage to HDD. <p><OK></p> <p><NG></p>
No water / solvent	<ul style="list-style-type: none"> Do not hold HDD with a wet hand or put magnets, solvent, tea, coffee, etc, close to HDD. This affects internal components and outside of HDD <p><NG></p>
Connector	<ul style="list-style-type: none"> The interface connector pin is easily damaged. Push it lightly and firmly to the end along the connector guide. For further details, refer to "Precautions for inserting and removing HDD FPC".

3.5.3. Precautions for inserting and removing HDD FPC

Make sure to use the tool (LSVQ0112) when locking and unlocking the lock lever of HDD FPC connector.

Do not lock the lock lever without inserting HDD FPC. Otherwise, the connector may be damaged.

*The lock lever is open on initial condition.

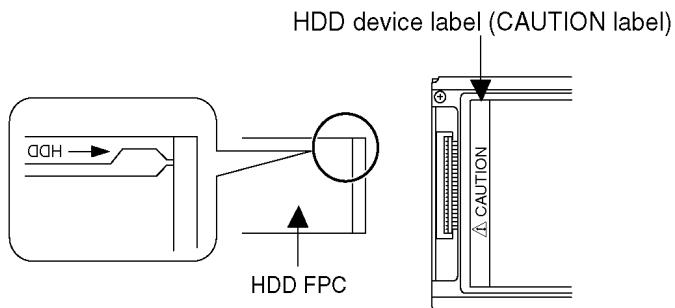

Insert HDD FPC

- ① Place HDD so that HDD device label (CAUTION label) faces up.

Caution: Do not set the HDD cushion when installing HDD FPC.

- ② Insert HDD FPC straight to the connector, and make sure if HDD FPC has been inserted to the end.

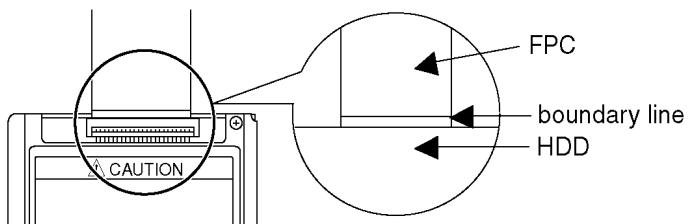

Caution: The connector surface of HDD FPC must face down and the letter "HDD" and the arrow must be seen as shown.

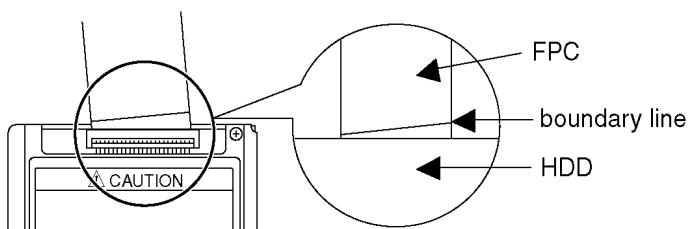

Check HDD FPC

Make sure if HDD FPC has been correctly inserted by confirming the FPC pattern boundary line.

<OK>

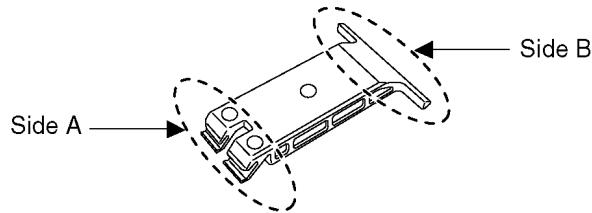

<NG>

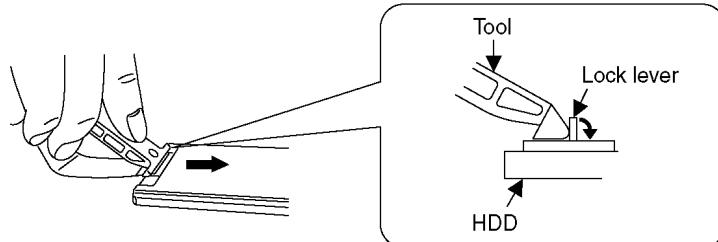

Tool operation

Lock using the tool after inserting HDD FPC.

<How to lock>

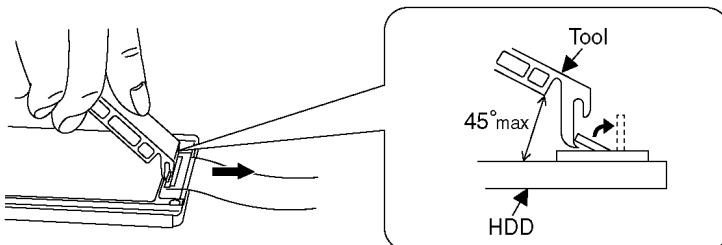

After inserting HDD FPC, put the tool (Side B) on the connector and slide it slightly to the direction as shown to lock the lock lever.

<How to unlock>

Hook up the tip of the tool (Side A) and unlock the lock lever.

The angle of the tool must be less than 45 degree.

Make sure to use the tool (LSVQ0112) when opening and closing the lock lever.

When install the HDD to main unit, necessary install the HDD FPC and HDD cushion.

3.6. Formatting HDD

When HDD is exchanged, format HDD as the procedure below

Formatting

Please be aware that if a medium is formatted, then all the data recorded on the medium will be erased and cannot be restored. Back up important data on a PC, DVD disc etc.

■ Change the mode to , or , and select desired media to be formatted.

Select the menu.

Formatting HDD

[SETUP] → [FORMAT HDD] → [YES]

- When the confirmation message appears, touch [YES].
- When formatting is complete, touch [EXIT] to exit the message screen.
- Perform a physical formatting of the HDD when this unit is to be disposed/transferred.

					33 h 30 min

A Favors image quality

B Favors recording time

1 1920×1080: Motion pictures can be recorded with the highest picture quality.

*2 1920×1080: Motion pictures can be recorded with high picture quality.

*3 1920×1080: Motion pictures can be recorded with normal picture quality.

*4 1440×1080: Motion pictures can be recorded for a longer time.

* This means the highest quality for this unit.

● The recording is in high definition picture quality in all recording modes.

● Maximum continuously recordable time for one scene: 12 hours

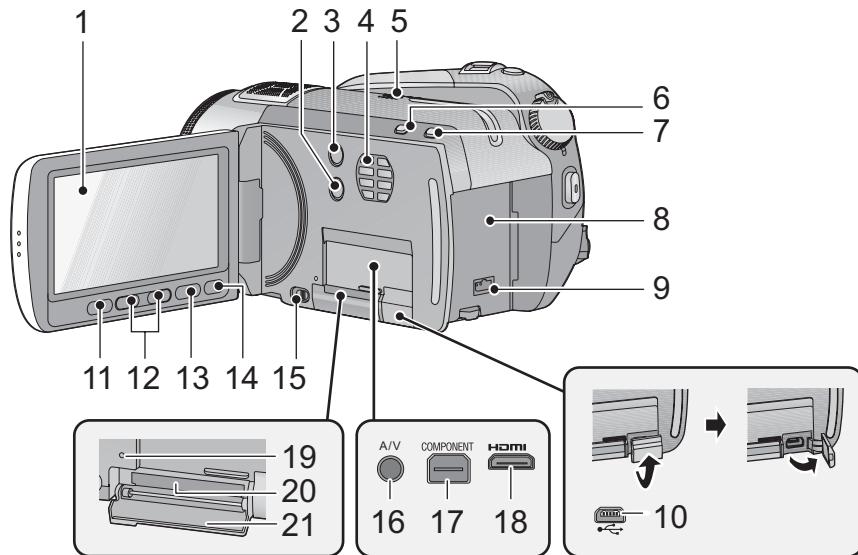

● The recording is paused once when the recording time for one scene exceeds 12 hours, and the recording will automatically resume after a few seconds.

● If a recording with a lot movements is recorded, the recording time is reduced.

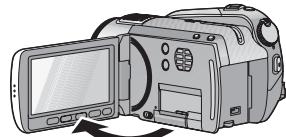

● The recordable time may be reduced if recording of short scene is repeated.

● Use time in the row of 4 GB in above table as a guideline for the time that can be copied onto one DVD disc (4.7 GB).

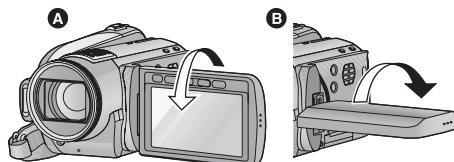

5 Location of Controls and Components

1 LCD monitor (Touch screen)

- It can open up to 90°.

- It can rotate up to 180° **A** towards the lens or 90° **B** towards the opposite direction.

Due to limitations in LCD production technology, there may be some tiny bright or dark spots on the LCD monitor screen. However, this is not a malfunction and does not affect the recorded picture.

2 Manual button [MANUAL]

3 Optical image stabilizer button

[(手), O.I.S.]

4 Inlet (cooling fan)

- The cooling fan rotates to prevent the internal temperature from rising. Take care not to cover the inlet when using this unit.

5 Speaker

6 Intelligent auto button [iA]

7 PRE-REC button [PRE-REC]

8 Battery holder

9 DC input terminal [DC IN]

- Always use the supplied AC adaptor or a genuine Panasonic AC adaptor (VW-AD21PP; optional).

10 USB terminal [↔]

11 Sub recording start/stop button

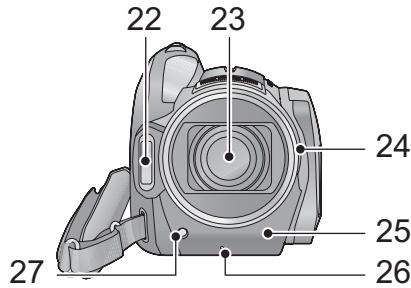

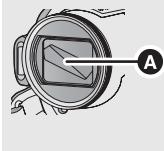

- This button functions in the same manner as the recording start/stop button.

12 Zoom buttons

- These buttons function in the same manner as the zoom lever. Changing the thumbnail display and adjusting the volume can be done.

13 Menu button [MENU]**14 Delete button []****15 SD card open lever [OPEN]****16 Audio-video output terminal [A/V]**

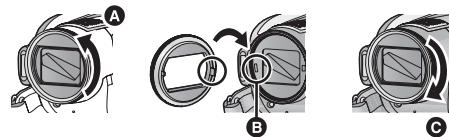

- Use the AV cable (only the supplied cable).

17 Component terminal [COMPONENT]**18 HDMI mini connector [HDMI]****19 Access lamp [ACCESS]****20 Card slot****21 SD card cover****22 Built-in flash****23 Lens (LEICA DICOMAR)****Lens cover A**

- The lens cover opens in Motion Picture Recording Mode or Still Picture Recording Mode.

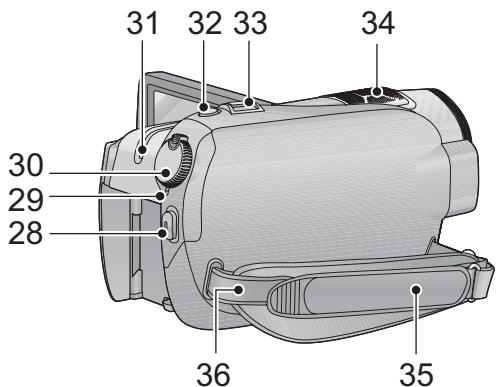

24 Lens hood

Rotate the lens hood counter-clockwise **A** to remove it. In order to attach it, place into slot **B**, and then rotate it clockwise **C**.

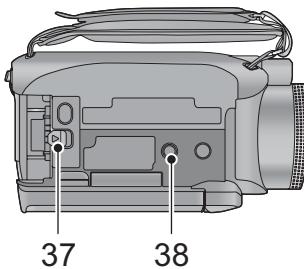

- When fitting the tele conversion lens (VW-T4314H; optional) or the wide conversion lens (VW-W4307H; optional), first remove the lens hood.

25 Remote control sensor**26 Recording lamp****27 AF assist lamp**

- 28 Recording start/stop button**
- 29 Status indicator**
- 30 Mode dial**
- 31 HDD access lamp [ACCESS HDD]**
- 32 Photoshot button [CAMERA icon]**
- 33 Zoom lever [W/T] (In Recording Mode)
Thumbnail display switch/Volume lever
[- VOL+] (In Playback Mode)**
- 34 Internal microphones (5.1 channel support)**
- 35 Grip belt**
Adjust the length of the grip belt so that it fits your hand.

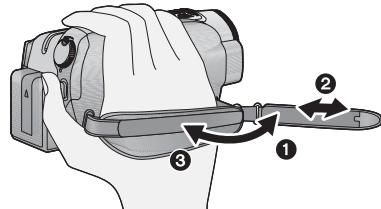

36 Shoulder strap fixture

37 Battery release lever [BATT]

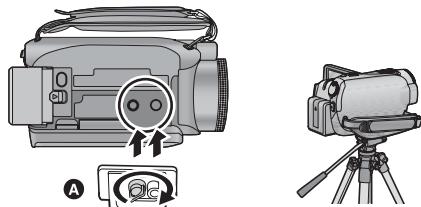

38 Tripod receptacle

This is a hole for attaching the unit to the optional tripod. (For details on mounting the tripod, refer to the operating instructions for the tripod.)

- ① Flip the belt.
- ② Adjust the length.
- ③ Replace the belt.

④ Camera base

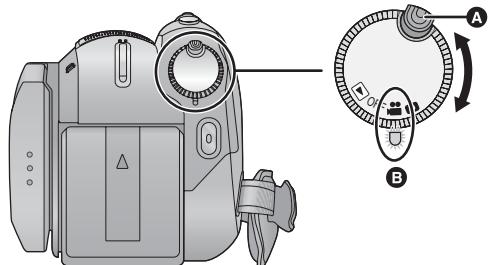

④ Camera base

Selecting a mode (Turning the unit on/off)

Change the mode to recording, playback or power OFF.

Turn on the power by changing the mode to  ,  or  while pressing the lock release button **A**.

- Rotate the mode dial while at the same time pressing in the lock release button if changing from OFF to another mode.
- Align with the status indicator **B**.

The status indicator lights.

To turn off the power

Change the mode to OFF.

The status indicator goes off.

	Motion Picture Recording Mode
	Still Picture Recording Mode
	Playback Mode
OFF	

Turning the power on and off with the LCD monitor

When the mode is set to  or  , power is turned on when the LCD monitor is opened, and power is turned off when it is closed.

■ To turn on the power

- A** The status indicator lights.

■ To turn off the power

- A** The status indicator goes off.

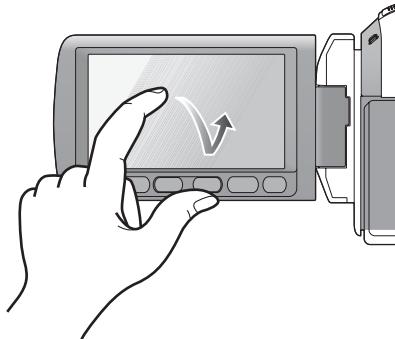

Change the mode to OFF when this unit is not being used.

How to use the touch screen

You can operate by directly touching the LCD monitor (touch screen) with your finger.
It is easier to use the stylus pen (supplied) for detailed operation, or if it is hard to operate with your fingers.

■ Touch

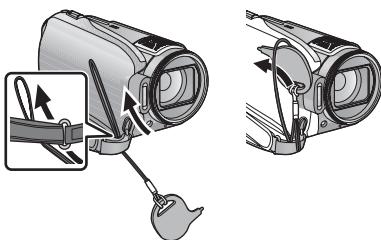

Touch and release the touch screen to select icon or picture.

- Touch the center of the icon.
- Touching the touch screen will not operate while you are touching another part of the touch screen.

■ About the Stylus pen

The stylus pen (supplied) can be stored on the unit as shown when it is not being used. Remove the stylus pen from the unit when it is to be used.

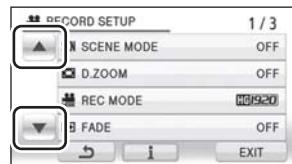

- Only use the supplied stylus pen.
- Do not tuck the stylus pen with the LCD monitor.

■ About the operation icons

▲ / ▼ / ◀ / ▶ :

These icons are used to switch between the menu and thumbnail display page, for item selection and setting etc.

Touch to return to the previous screen such as when setting menus

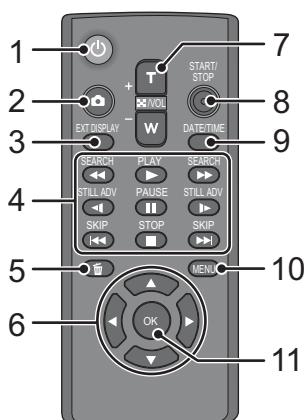

- Wipe the LCD monitor with a soft cloth, such as eye glass cleaner, when it gets dirty with finger prints etc.
- Do not touch on the LCD monitor with hard pointed tips, such as ball point pens.
- Do not touch the LCD monitor with your finger nails, or rub or press with strong force.
- It may become hard to see or hard to recognize the touch when the LCD protection sheet is affixed.
- Perform the touch screen calibration when the touch is not recognized or wrong location is recognized.

Using with the remote control

Select the menu.

[SETUP] → [REMOTE CONTROL] → [ON]

- This function's default setting is [ON].
- [REMOTE CONTROL] can be set to [OFF] so the remote control will not be mistakenly used when not in use.

1 Power on/off button []

Power can be turned on/off when the mode is set to anything but OFF.

- Power cannot be turned on by the power on/off button when 36 hours have passed after the power is turned off.
- Power cannot be turned off when it is connected to the PC or the DVD burner.

2 Photoshot button []*

3 On-screen display button [EXT DISPLAY]

4 Playback operation buttons

These buttons function in the same manner as the corresponding playback operation icon being displayed on screen.
[Excluding skip playback].

5 Delete button []*

6 Direction buttons [▲, ▼, ▲, ▼]

7 Zoom/volume/thumbnail display switch buttons [T, W, [] /VOL]*

8 Recording start/stop button [START/STOP]*

9 Date/time button [DATE/TIME]

10 Menu button [MENU]*

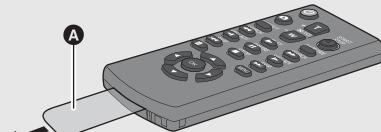

11 OK button [OK]

* means that these buttons function in the same manner as the corresponding buttons on the unit.

CAUTION

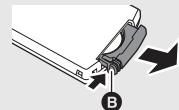

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

Remove the insulation sheet A before using.

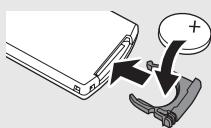

Replace a button-type battery

- 1 While pressing the stopper B, pull out the battery holder.

- 2 Set the button-type battery with its (+) mark facing upward and then put the battery holder back in place.

- When the button-type battery runs down, replace it with a new battery (part number: CR2025). The battery should normally last about 1 year, however this depends on how frequently the unit is used.
- Keep the button-type battery out of reach of children to prevent swallowing.

Replace battery with Panasonic PART NO.

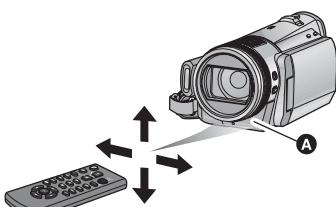

CR2025 only. Use of another battery may

present a risk of fire or explosion.

Caution: Battery may explode if mistreated. Dispose of used battery promptly. Keep away from children.

Do not recharge, disassemble or dispose of in fire.

■ Remote control usable range

A Remote control sensor

Distance: Within approx. 5 m (16 feet)

Angle: Approx. 10° up and 15° down, left, and right

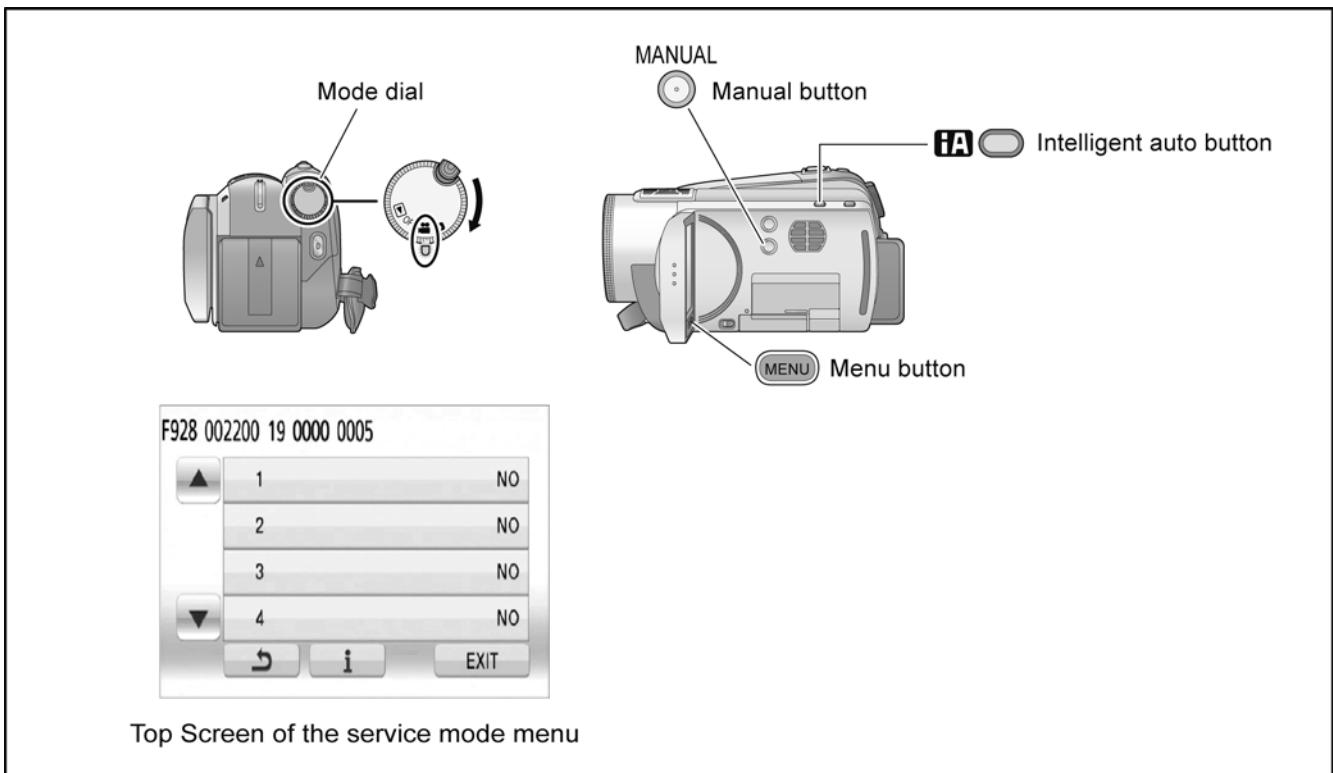

- The remote control is intended for indoor operation. Outdoors or under strong light, the unit may not operate properly even within the usable ranges.

6 Service Mode

1. Indication method of the service menu

Set the mode dial "Motion Picture Recording" mode.

2. While keep pressing the "Intelligent auto" button, "Manual" button and "Menu" button for more than 3 seconds until the top screen of the Service Mode Menu being displayed.

Top Screen of the service mode menu

Service mode menu

Screen display	Contents	Function
1	Factory settings	Function to throw a product up in a factory shipment state (When recorded data in HDD, "error display" is done)
2	Drive information display	Fall detection frequency of HDD, Frequency that exceeds highest/lowest operation guarantee temperature and serial number display
3	HDD self check execution	Function to check self as for the state of HDD
4	Lock search history indication	Display an error code for three histories saved in EEPROM
5	Power ON self check result display	Power ON self check (function to diagnose correct function of the device and interface between devices) result display
6	HDD hardware test	Function to confirm state of HDD hardware

NOTE:

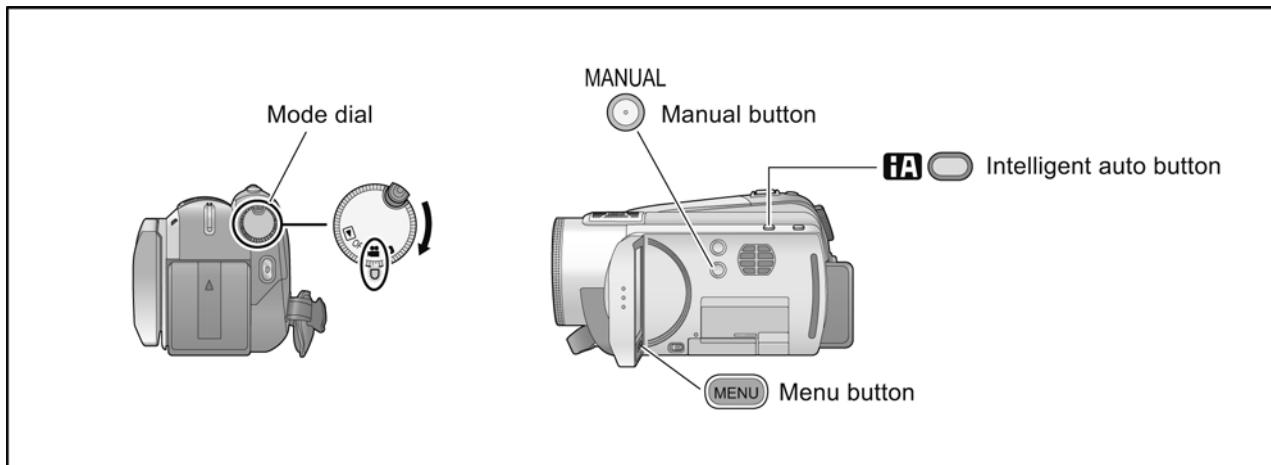

Do not using service mode except above table of Service Menu.

3. End method of the top screen of the service menu

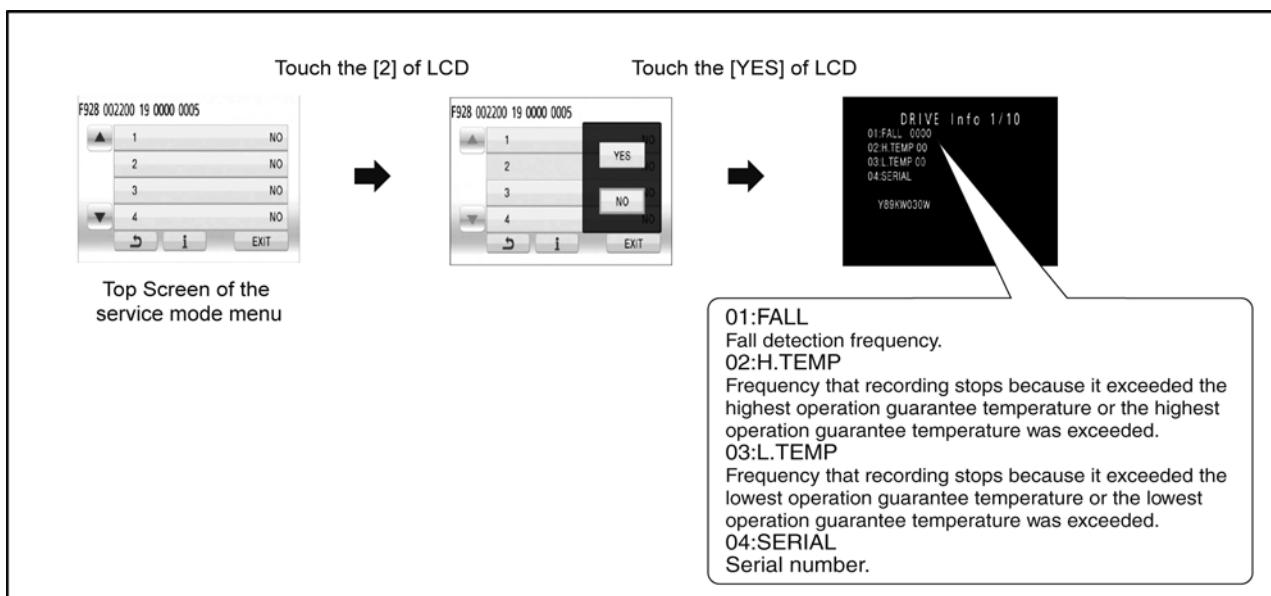

Push the menu button to end the service mode, and then POWER OFF.

6.1. Drive Information Display

1. Set the mode dial "Motion Picture Recording" mode.
2. While keep pressing the "Intelligent auto" button, "Manual" button and "Menu" button for more than 3 seconds until the top screen of the Service Mode Menu being displayed.
3. Touch the [2] of LCD, select Drive Information display.

Operation specifications

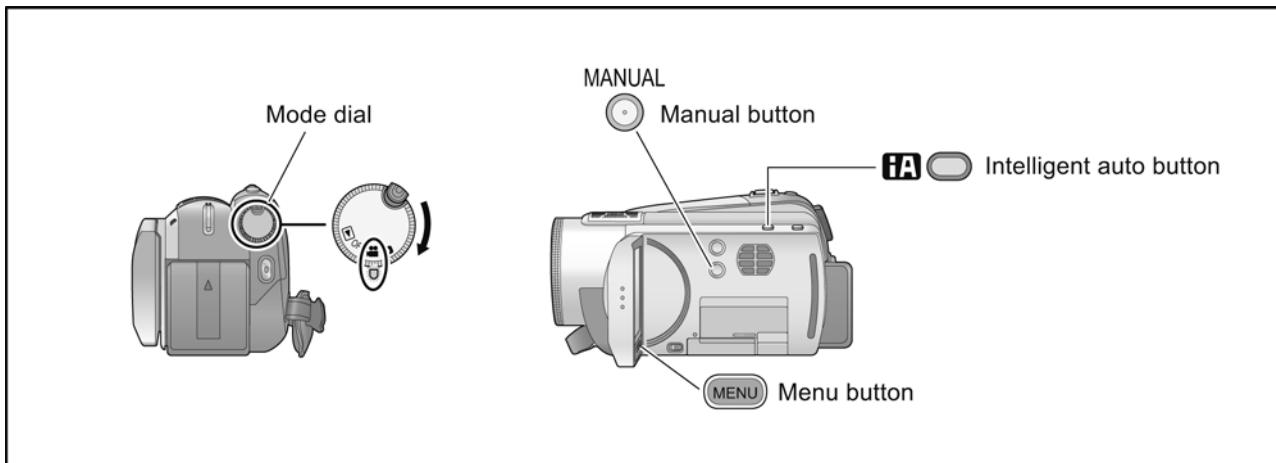

Indication contents

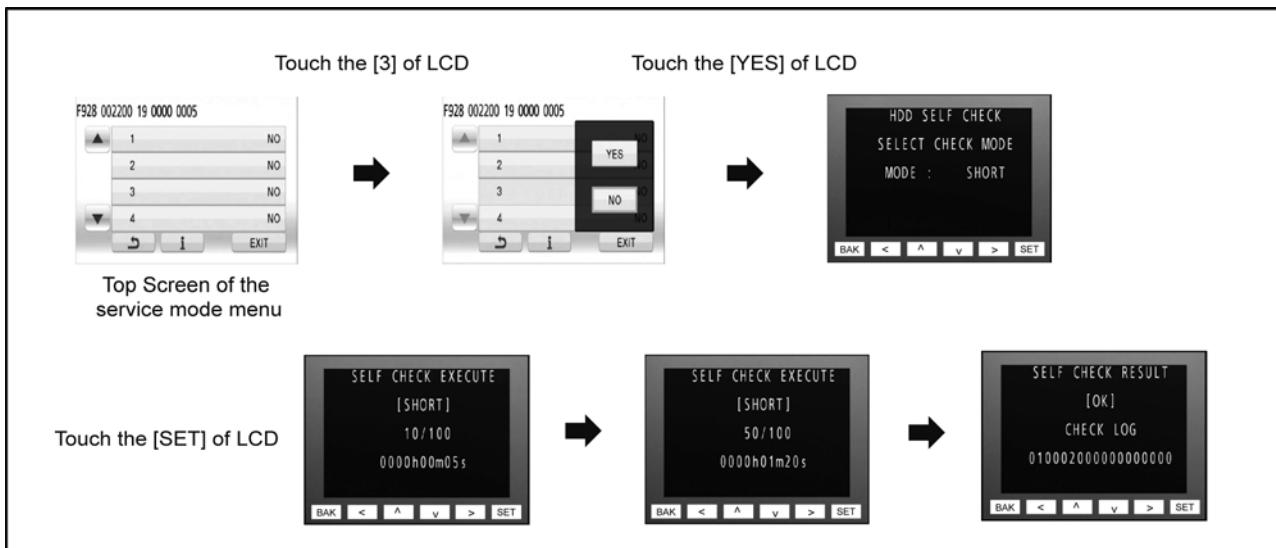

- Drive Information display
Display the fall detection frequency of HDD, Frequency that exceeds highest/lowest operation guarantee temperature and serial number.
Push the menu button to end the service mode, and then POWER OFF.

6.2. HDD Self Check Execution

1. Set the mode dial "Motion Picture Recording" mode.
2. While keep pressing the "Intelligent auto" button, "Manual" button and "Menu" button for more than 3 seconds until the top screen of the Service Mode Menu being displayed.
3. Touch the [3] of LCD, select HDD self check execution.

Operation specifications

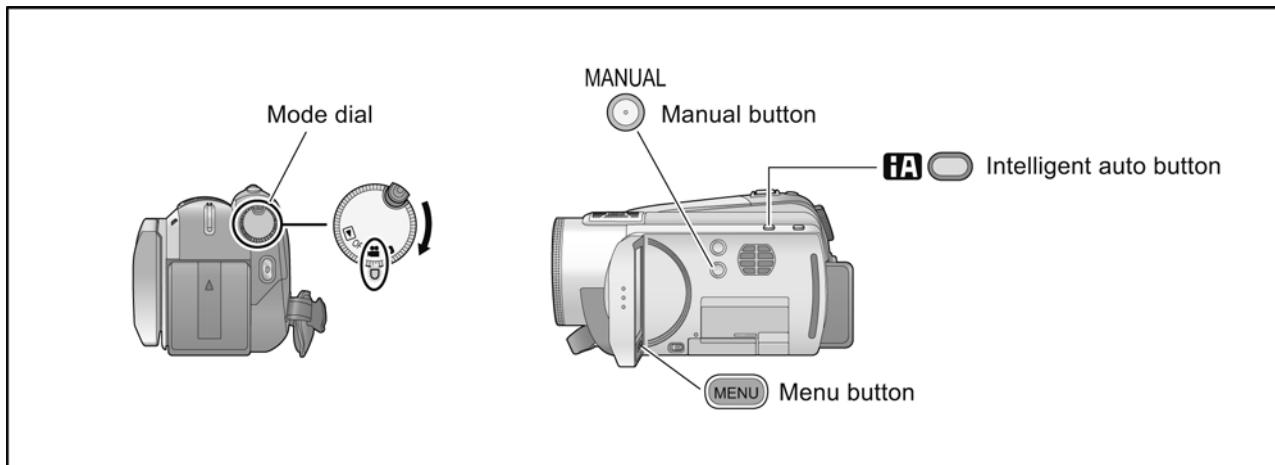

Indication contents

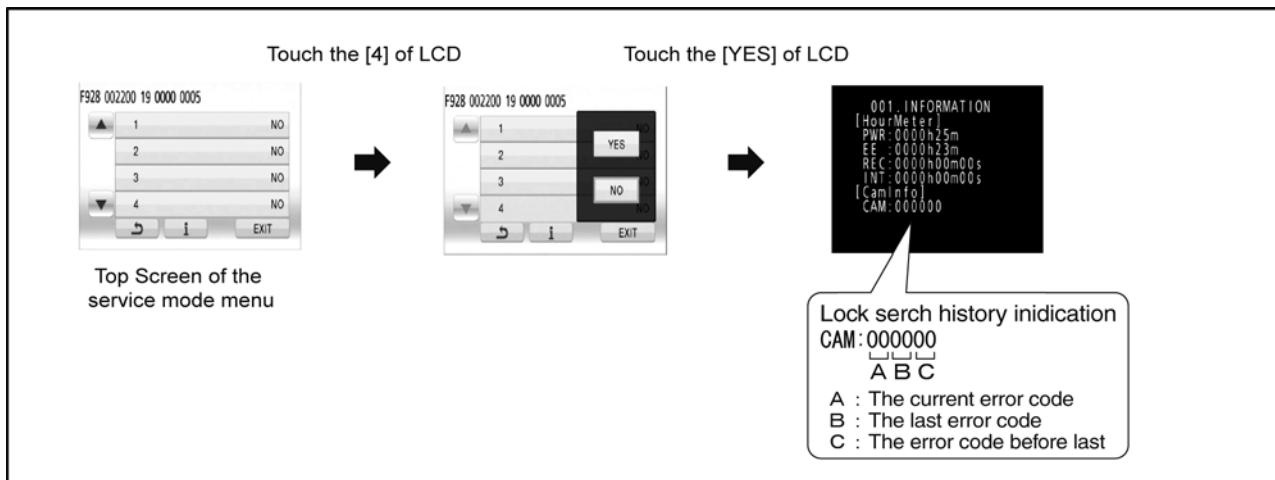

- HDD self check execution
Display the HDD self check result information.
Displays other than "OK" are abnormalities of HDD.
Push the menu button to end the service mode, and then POWER OFF.

6.3. Lock Search History Indication

1. Set the mode dial "Motion Picture Recording" mode.
2. While keep pressing the "Intelligent auto" button, "Manual" button and "Menu" button for more than 3 seconds until the top screen of the Service Mode Menu being displayed.
3. Touch the [4] of LCD, select Lock search history indication.

Operation specifications

Indication contents

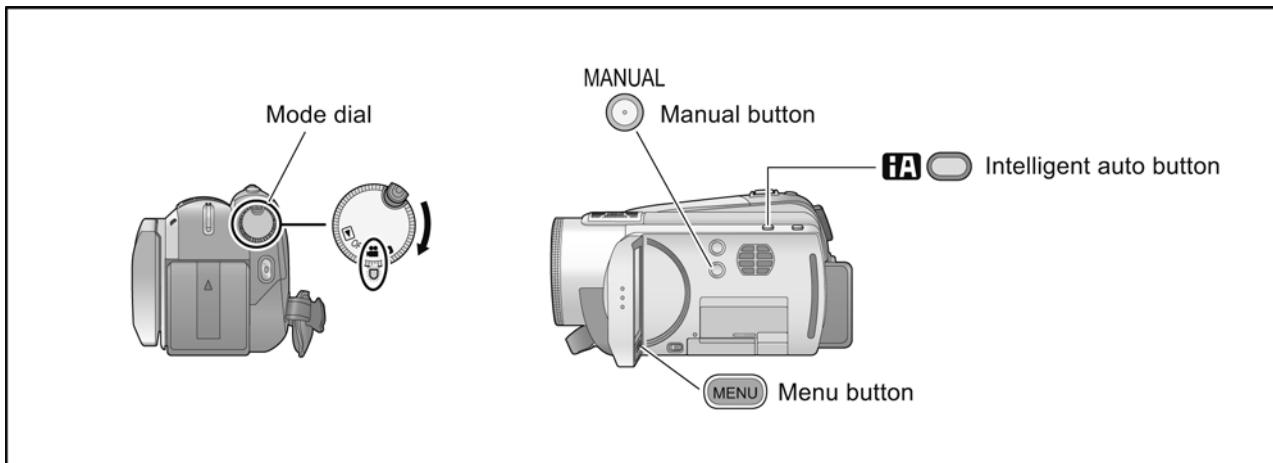

- Lock search history indication
Display the camera system error cord for three histories saved in EEPROM.
- The error cord contents which are displayed

Error code	Function
51	Focus control is abnormal
52	Zoom control is abnormal
53	OIS lens control is abnormal
71	Lens cover open/close is abnormal
72	Cooling fan is abnormal
73	High temperature is abnormal
33	Communication between camera to ARM is abnormal

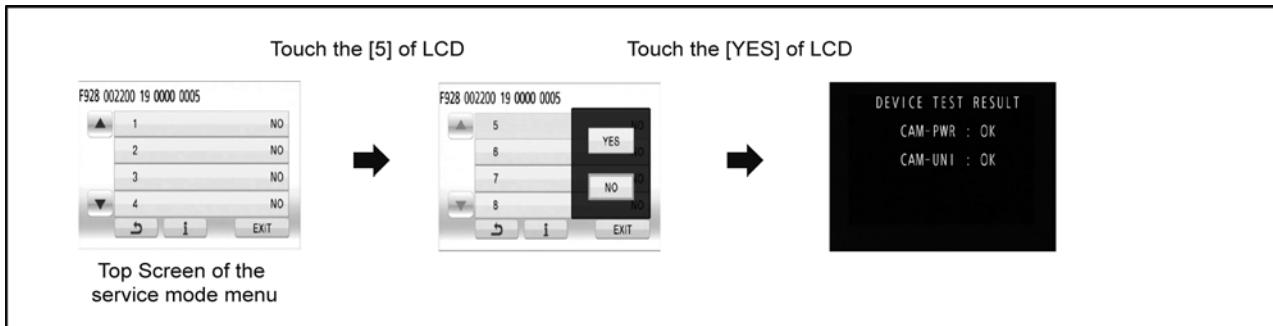

Lock search history indication is finished by POWER OFF.

6.4. Power ON Self Check Result Display

1. Set the mode dial "Motion Picture Recording" mode.
2. While keep pressing the "Intelligent auto" button, "Manual" button and "Menu" button for more than 3 seconds until the top screen of the Service Mode Menu being displayed.
3. Touch the [5] of LCD, select Power ON self check result display.

Operation specifications

Indication contents

- Power ON self check result display

Function to diagnose correct function of the device and interface between devices result display.

Display the following communication test result.

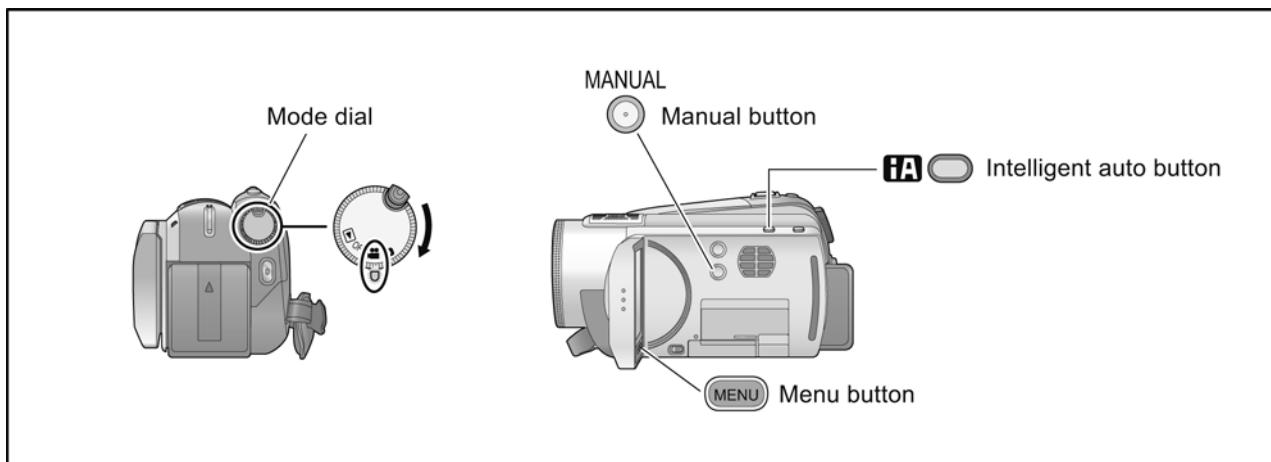

- CAM-PWR : Communication test between IC2006 to IC301
- CAM-UNI : Communication test between IC3400 to IC301

Display other than "OK" are abnormalities of each lines.

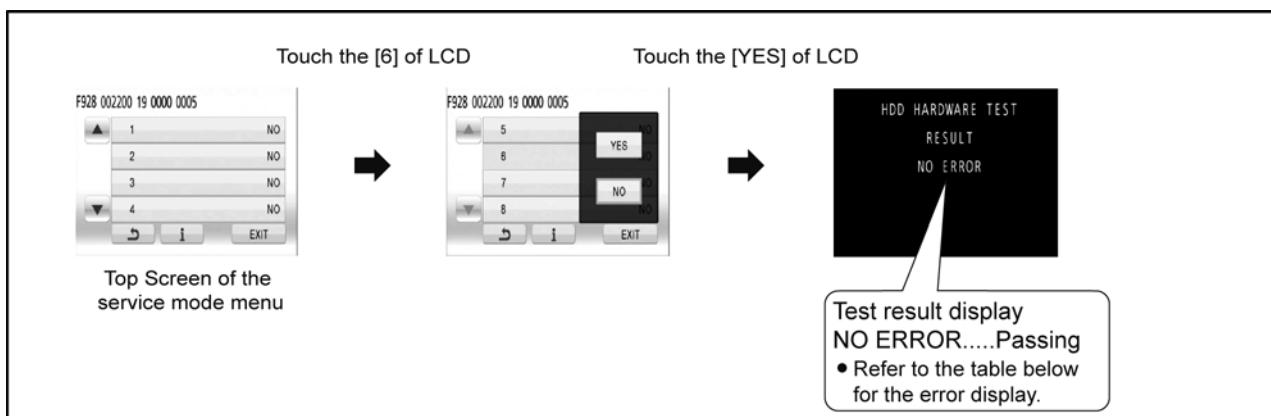

Push the menu button to end the service mode, and then POWER OFF.

6.5. HDD Hardware Test

1. Set the mode dial "Motion Picture Recording" mode.
2. While keep pressing the "Intelligent auto" button, "Manual" button and "Menu" button for more than 3 seconds until the top screen of the Service Mode Menu being displayed.
3. Touch the [6] of LCD, select HDD hardware test.

Operation specifications

Indication contents

- HDD hardware test
Display the HDD hardware test result information.
- The error code contents which are displayed

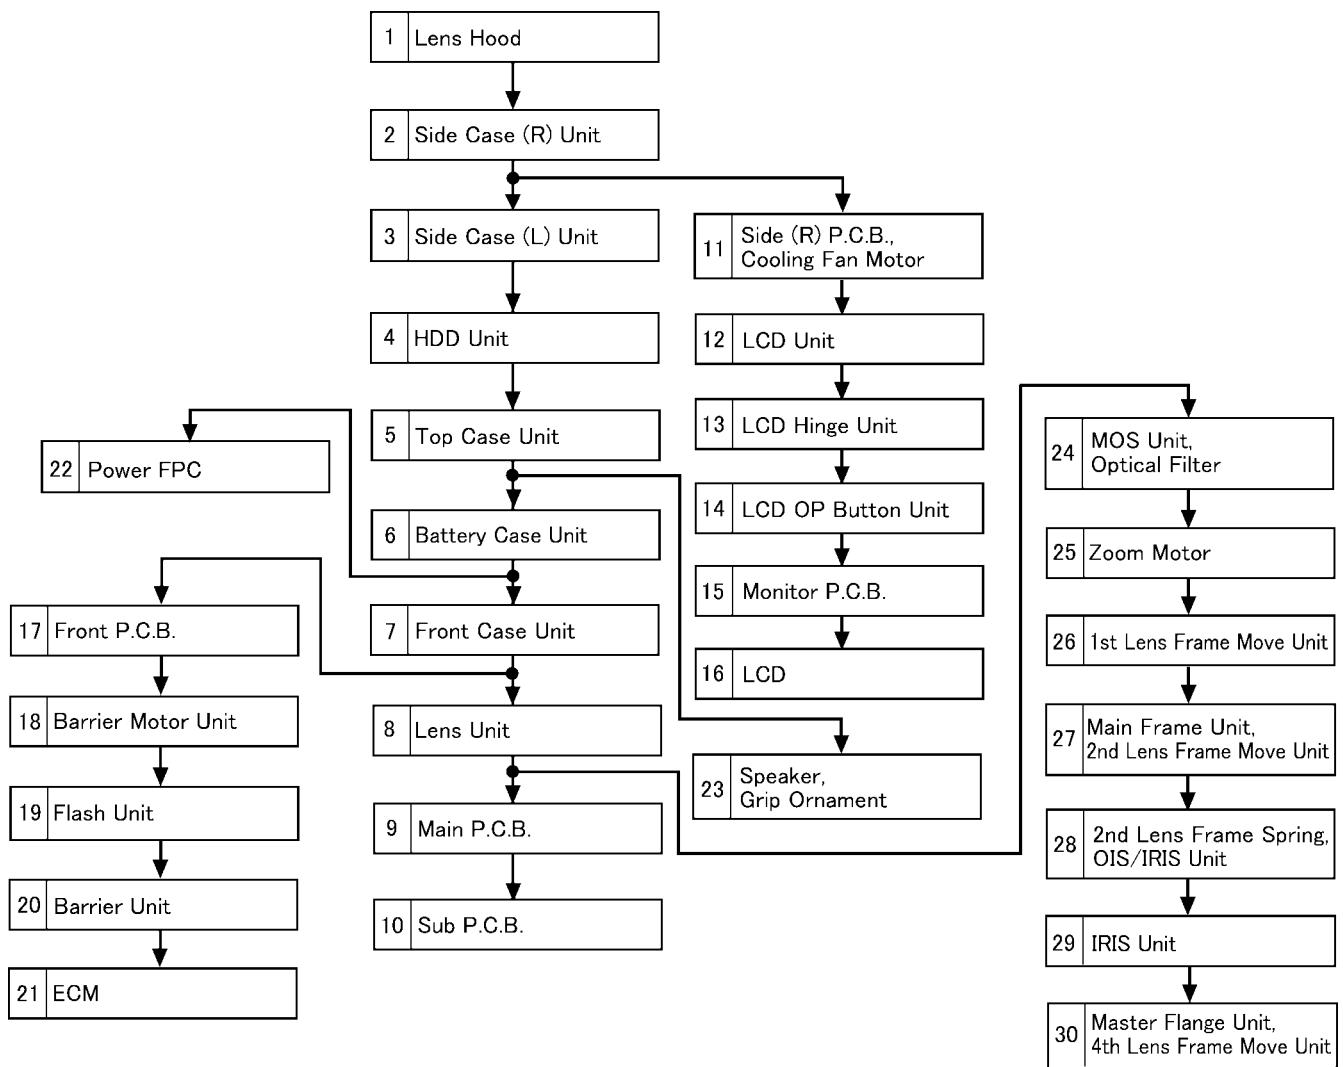

Error code	Function
NO ERROR	It is normal without the error
CTR ERROR	Controller Resistor Error
BUFF RAM ERROR	Buffer RAM Error
ECC DEV ERROR	ECC device Error
CPU ERROR	CPU RAM/ROM Error
COMMAND ERROR	Reserved

In the above table, displays other than "NO ERROR" are abnormalities of HDD.

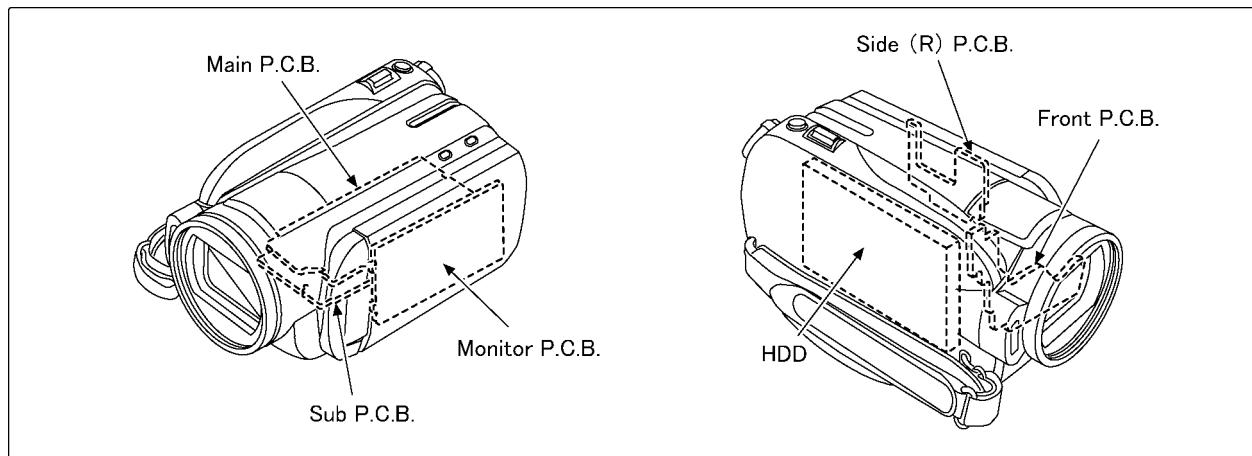

Push the menu button to end the service mode, and then POWER OFF.

8 Measurements and Adjustments

8.1. Electric Adjustment

- Adjustment method is different from a conventional SD video camera.
- An exclusive jig and PC (including software for adjustment "Tatsujin") are necessary for electric adjustment.
- A USB driver for service is necessary to communication with PC.
- Connection method of the main unit and an exclusive adjustment jig as follows

8.1.1. Adjustment Procedure

- Connect the main unit to PC with USB.

The adjustment instruction is available at "Software download" on the "Support Information from NWBG/VDBG-AVC" web-site in "TSN System".

Figure of connection

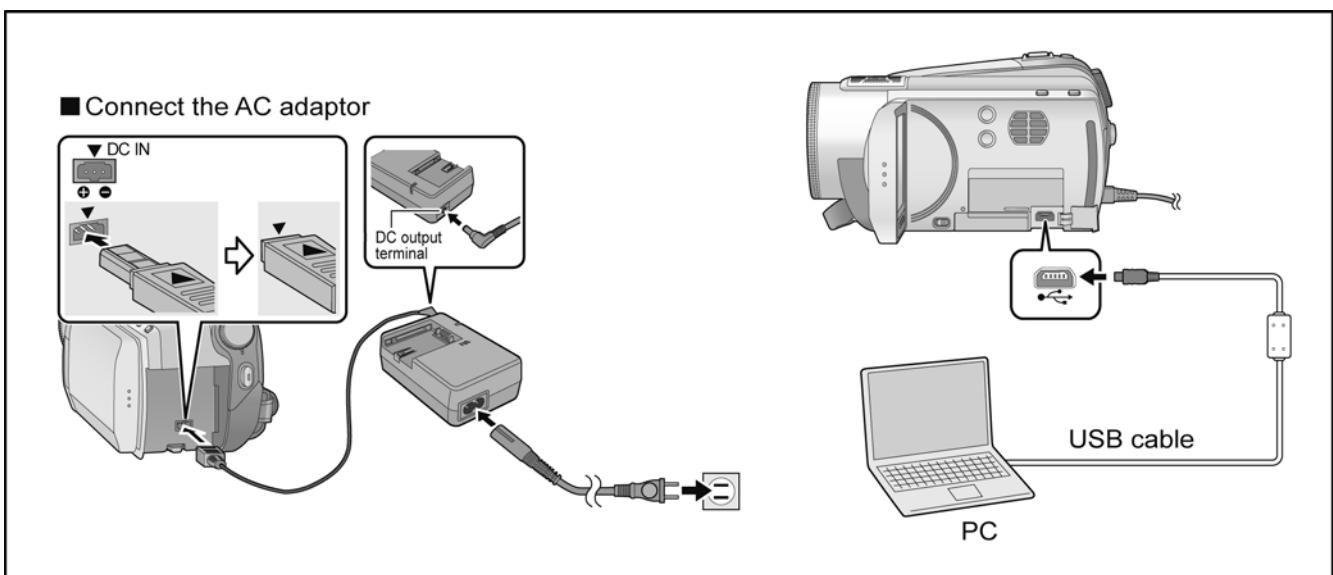

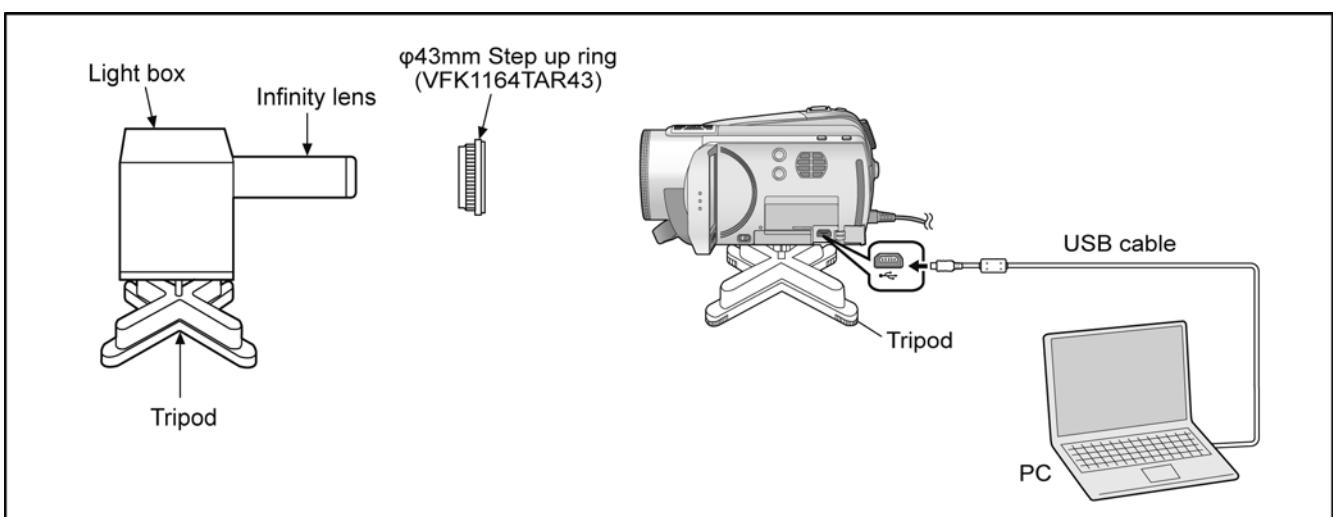

Figure of image when adjustment

Part Number of jig

- Only a necessary jig mentions it in setup of electric adjustment.

No.	Part Name	Part Number	Remarks
1	PC	-----	
2	AC Adaptor	-----	
3	DC Cable	-----	
4	USB Cable	-----	
5	43mm Step Up Ring	VFK1164TAR43	
6	Adjustment Software (Tatsujin)	-----	

Adjustment Items

- Adjustment item as follows.

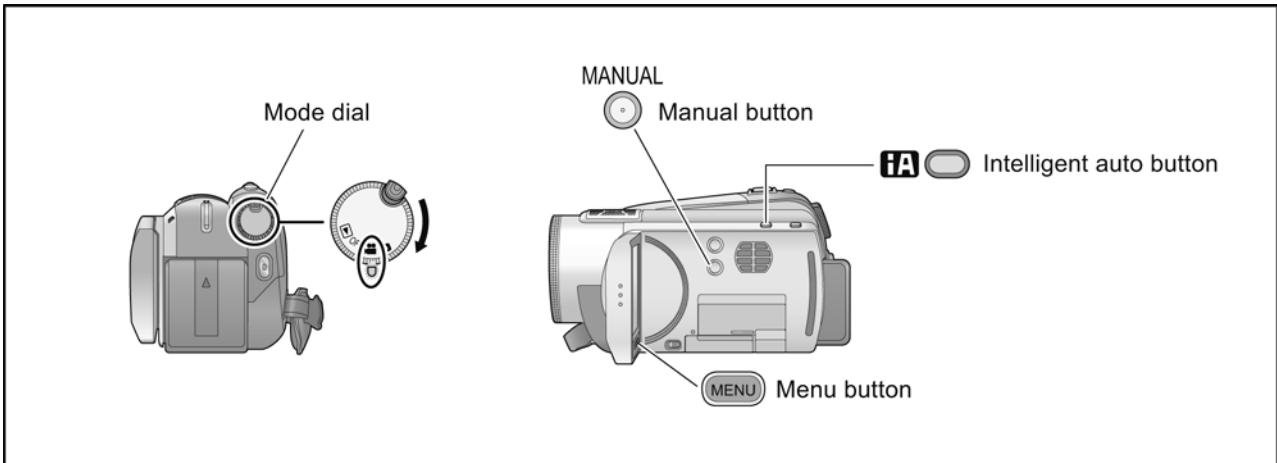

The adjustment instruction is available at "Software download" on the "Support Information from NWBG/VDBG-AVC" web-site in "TSN System".

	Adjustment item	Replacement part							
		Main P.C.B.	IC2007(EEPROM)	Lens P.C.B.	Prism Unit	IRIS	4th lens frame move unit	IC3400	IC301

9 Factory Setting

9.1. HOW TO TURN ON THE FACTORY SETTINGS?

1. Set the mode dial “Motion Picture Recording” mode.
2. While keep pressing the “Intelligent auto” button, “Manual” button and “Menu” button for more than 3 seconds until the top screen of the Service Mode Menu being displayed.

3. Touch the [1] of LCD.
4. Touch the [YES] of LCD.
5. After few seconds “END” is displayed on LCD monitor. Cutting of battery connection or AC power supply connection as a completion of the “FACTORY SETTINGS”.

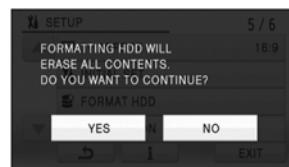

9.2. WHAT IS THE FACTORY SETTINGS?

The factory settings clean up and/or refresh the following settings.

1. MENU, MODE, ADJUSTMENT VALUE.
2. SD card format.
3. Reset the folder number and file number of still pictures.
(Setting the folder number is 100, and file number is 0.)
4. Clear the mechanism lock information.
5. Clear the service mode information contents.
6. Close the lens cover
7. Initialize the VIERA Link Physical Address.
8. Confirm the data area of HDD is cleared.
(When recorded data in HDD, "error display" is done)

If "error display" is done, execute physical format according to the following procedure.

To physically format the HDD, connect the unit via the AC adaptor, select [FORMAT HDD] → [YES] from the menu, and then press and hold the delete button on the screen below for about 3 seconds. When the HDD data deletion screen appears, select [YES], and then follow the on-screen instructions.

The setting position of factory settings:

Name	Setting position

S1. About Indication of The Schematic Diagram

S1.1. Important Safety Notice

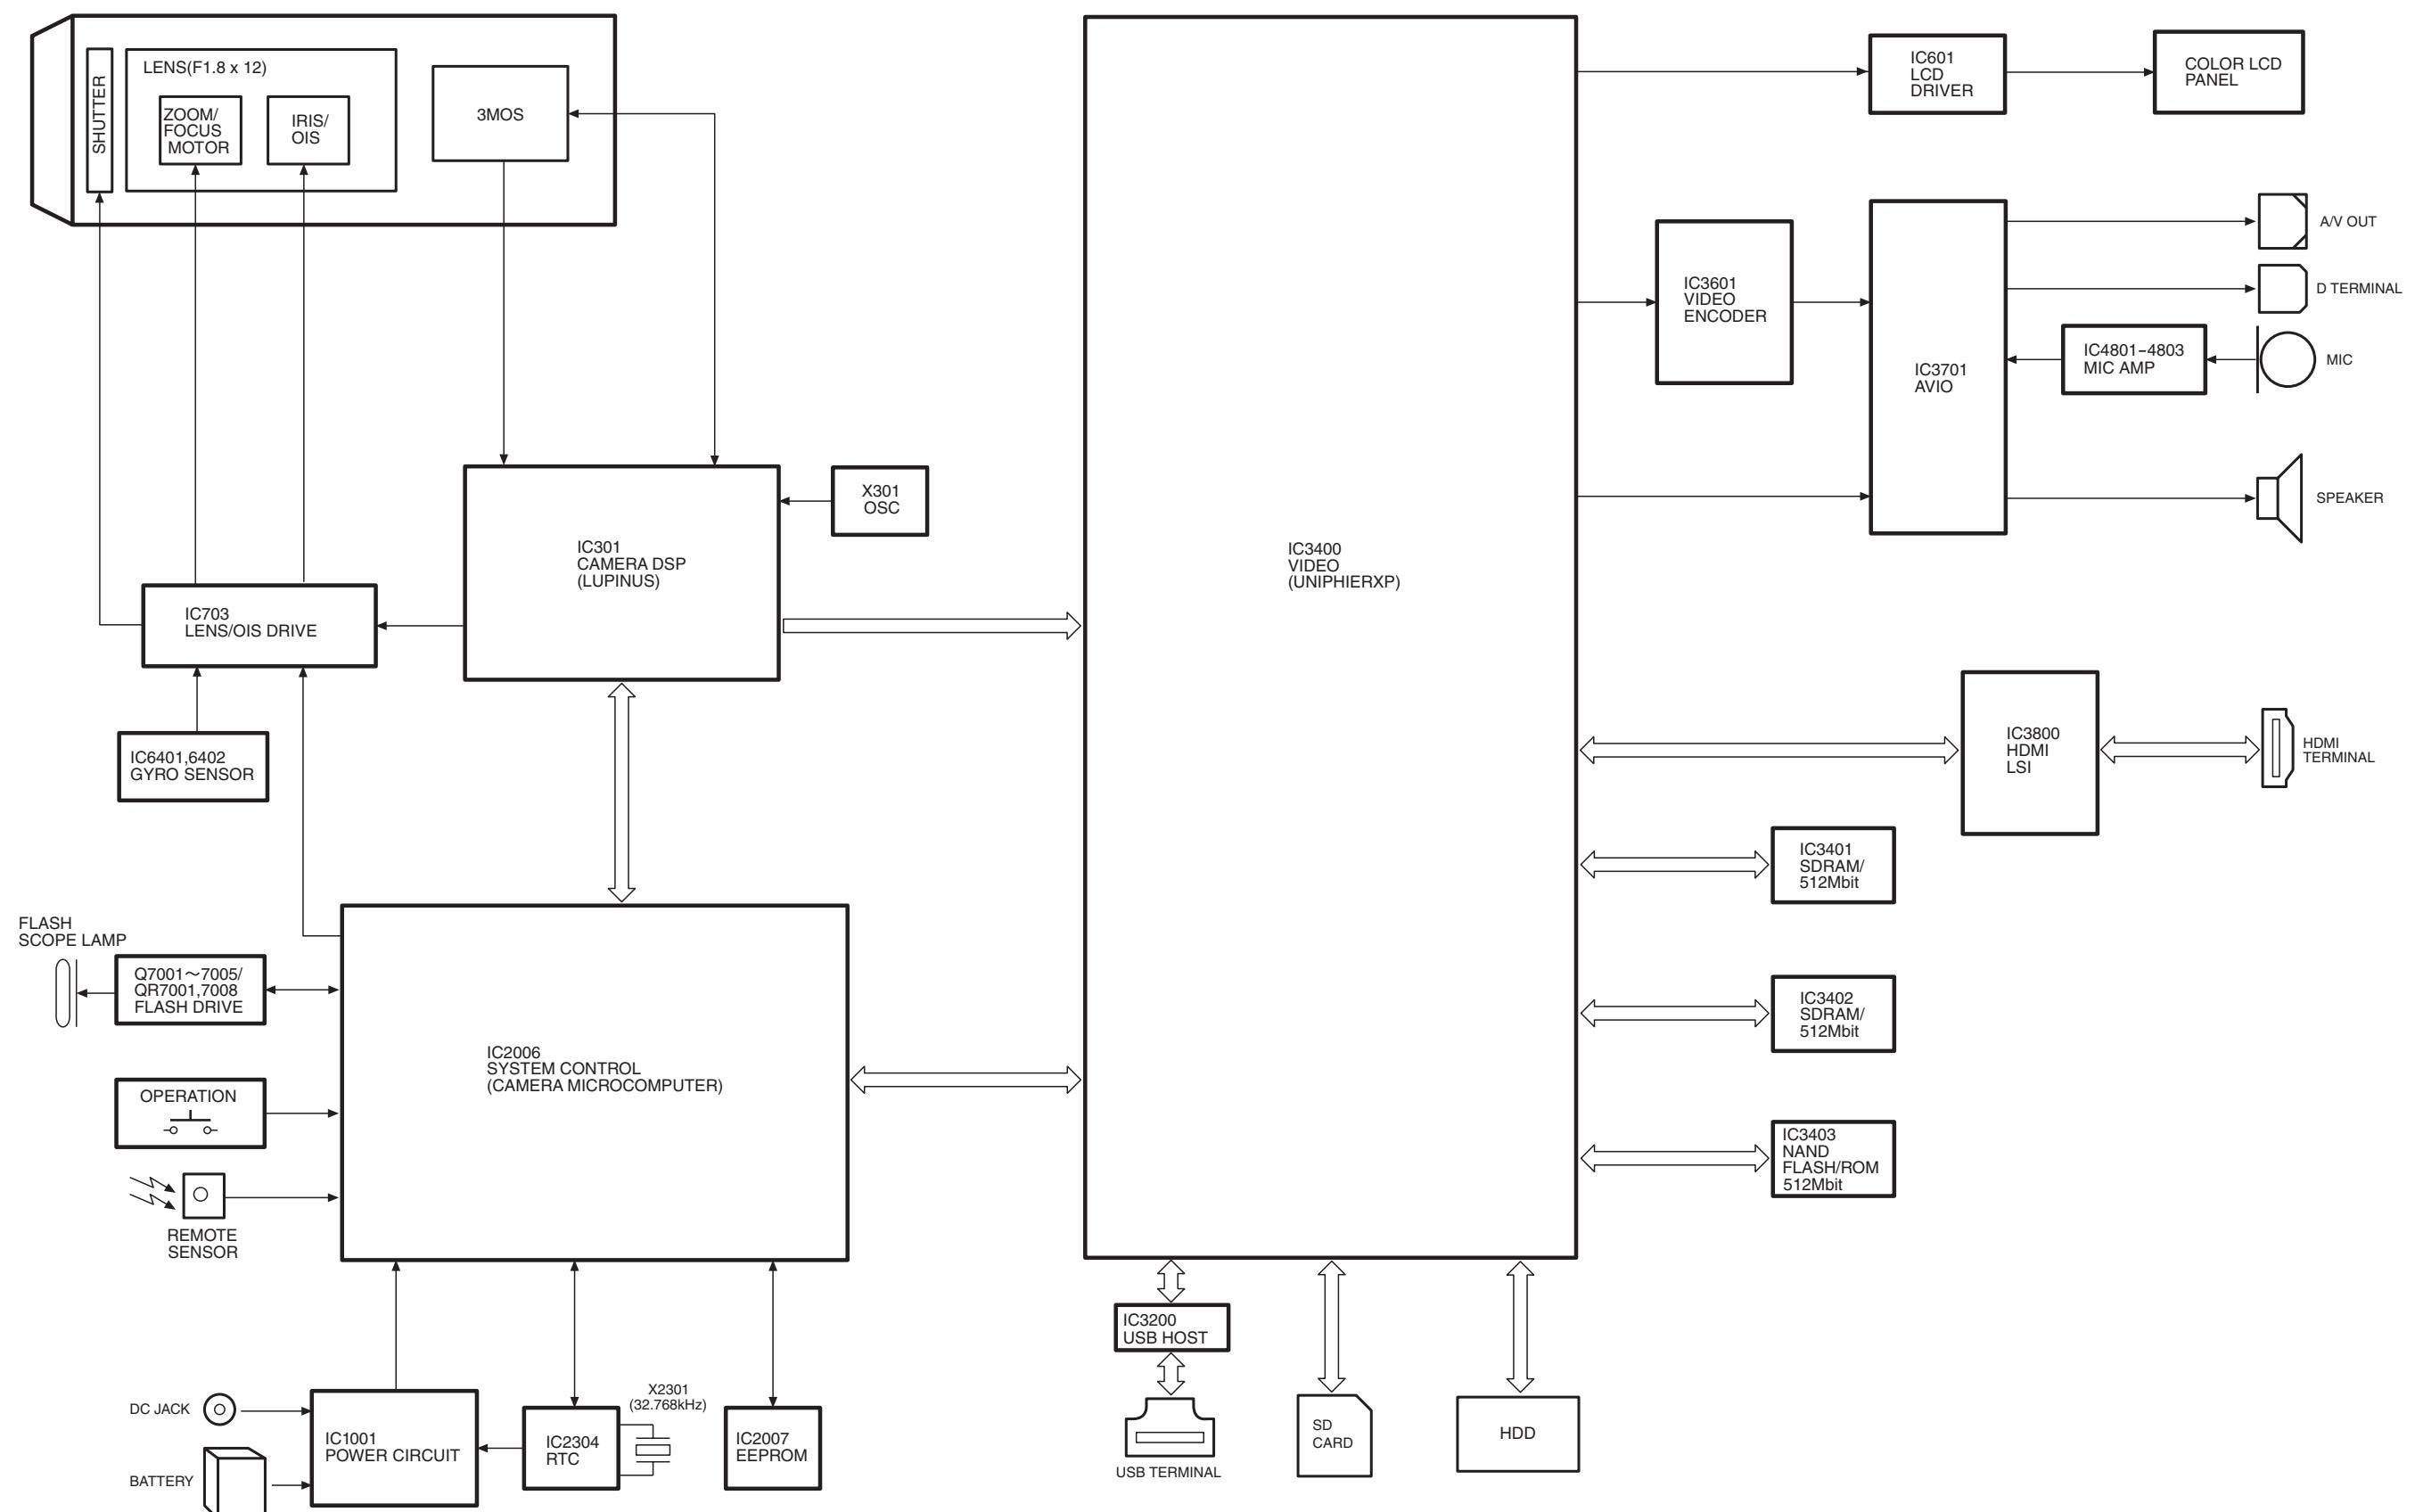

COMPONENTS IDENTIFIED WITH THE MARK HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY. WHEN REPLACING ANY OF THESE COMPONENTS USE ONLY THE SAME TYPE.

- 1.Although reference number of the parts is indicated on the P.C.B. drawing and/or schematic diagrams, it is NOT mounted on the P.C.B. when it is displayed with "\$" mark.
- 2.It is only the "Test Round" and no terminal (Pin) is available on the P.C.B. when the TP (Test Point) indicated as "●" mark.
- 3.The voltage being indicated on the schematic diagram is measured in "Standard-Playback" mode when there is no specify mode is mentioned.
- 4.Although the voltage and waveform available on here is measured with standard frame, it may be differ from actual measurement due to modification of circuit and so on.
- 5.The voltage being indicated here may be include observational-error (deviation) due to internal-resistance and/or reactance of equipment. Therefore, handle the value indicated on here as reference.
- 6.Use the parts number indicated on the Replacement Parts List .
- 7.Indication on Schematic diagrams:

S5. Replacement Parts List

Note: 1.* Be sure to make your orders of replacement parts according to this list.

2. IMPORTANT SAFETY NOTICE

Components identified with the mark  have the special characteristics for safety.

When replacing any of these components, use only the same type.

3. Unless otherwise specified,

All resistors are in OHMS, K=1,000 OHMS. All capacitors are in MICRO-FARADS (uf), P=uuF.

4. The marking (RTL) indicates the retention time is limited for this item. After the discontinuation of this assembly in production, it will no longer be available.

E.S.D. standards for Electrostatically Sensitive Devices, refer to “PREVENTION OF ELECTROSTATIC DISCHARGE (ESD) TO ELECTROSTATICALLY SENSITIVE (ES) DEVICES” section.

This PACKING CASE is for the cabinet colour black.
Please put the colour label matched to the cabinet colour
at the position of REF No.330 and REF No.331 when you
use this PACKING CASE for other cabinet colours.
