 **WARNING**

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

# 1 Safety Precautions

## 1.1. General Guidelines

### 1. IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by  in the Schematic Diagrams, Circuit Board Layout, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent X-RADIATION, shock fire, or other hazards. Do not modify the original design without permission of manufacturer.

2. An Isolation Transformer should always be used during the servicing of AC Adaptor whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks. It will also protect AC Adaptor from being damaged by accidental shorting that may occur during servicing.
3. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
4. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
5. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

### 1.1.1. Leakage Current Cold Check

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between  $1\text{M}\Omega$  and  $5.2\text{M}\Omega$ . When the exposed metal does not have a return path to the chassis, the reading must be infinity.

### 1.1.2. Leakage current hot check (See Figure 1)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect "A" to exposed metallic part on the set. And connect "B" to a good earth ground, as shown in Figure 1.
3. Use an AC voltmeter, with  $1\text{k}\Omega/\text{V}$  or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed  $0.25\text{ V RMS}$ . A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed  $1/2\text{ mA}$ . In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

Figure 1

## 2 Warning

### 2.1. Prevention of Electrostatic Discharge (ESD) to Electrostatic Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatic Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by electrostatic discharge (ESD).

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an antistatic solder removal device. Some solder removal devices not classified as "antistatic (ESD protected)" can generate electrical charge sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

**CAUTION:**

Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity (ESD) sufficient to damage an ES device).

#### IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety.

These parts are marked by  in the schematic diagrams, Exploded Views and replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

## **2.2. Service caution based on legal restrictions**

### **2.2.1. General description about Lead Free Solder (PbF)**

The lead free solder has been used in the mounting process of all electrical components on the printed circuit boards used for this equipment in considering the globally environmental conservation.

The normal solder is the alloy of tin (Sn) and lead (Pb). On the other hand, the lead free solder is the alloy mainly consists of tin (Sn), silver (Ag) and Copper (Cu), and the melting point of the lead free solder is higher approx.30 degrees C (86°F) more than that of the normal solder.

#### **Definition of PCB Lead Free Solder being used**

The letter of "PbF" is printed either foil side or components side on the PCB using the lead free solder. (See right figure)	PbF
---	-----

#### **Service caution for repair work using Lead Free Solder (PbF)**

- The lead free solder has to be used when repairing the equipment for which the lead free solder is used.  
(Definition: The letter of "PbF" is printed on the PCB using the lead free solder.)
- To put lead free solder, it should be well molten and mixed with the original lead free solder.
- Remove the remaining lead free solder on the PCB cleanly for soldering of the new IC.
- Since the melting point of the lead free solder is higher than that of the normal lead solder, it takes the longer time to melt the lead free solder.
- Use the soldering iron (more than 70W) equipped with the temperature control after setting the temperature at  $350\pm30$  degrees C ( $662\pm86$ °F).

#### **Recommended Lead Free Solder (Service Parts Route.)**

- The following 3 types of lead free solder are available through the service parts route.  
RFKZ03D01KS-----(0.3mm 100g Reel)  
RFKZ06D01KS-----(0.6mm 100g Reel)  
RFKZ10D01KS-----(1.0mm 100g Reel)

#### **Note**

\* Ingredient: tin (Sn), 96.5%, silver (Ag) 3.0%, Copper (Cu) 0.5%, Cobalt (Co) / Germanium (Ge) 0.1 to 0.3%

## 2.3. Caution for AC Cord (For EB/GC/GA)

### 2.3.1. Information for your safety

#### IMPORTANT

Your attention is drawn to the fact that recording of pre-recorded tapes or discs or other published or broadcast material may infringe copyright laws.

#### WARNING

To reduce the risk of fire or shock hazard, do not expose this equipment to rain or moisture.

#### CAUTION

To reduce the risk of fire or shock hazard and annoying interference, use the recommended accessories only.

#### FOR YOUR SAFETY

##### DO NOT REMOVE THE OUTER COVER

To prevent electric shock, do not remove the cover. No user serviceable parts inside. Refer servicing to qualified service personnel.

### 2.3.2. Caution for AC mains lead

For your safety, please read the following text carefully.

This appliance is supplied with a moulded three-pin mains plug for your safety and convenience.

A 5-ampere fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 5 amperes and it is approved by ASTA or BSI to BS1362

Check for the ASRA mark or the BSI mark on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover, the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local Panasonic Dealer.

If the fitted moulded plug is unsuitable for the socket outlet in your home then the fuse should be removed and the plug cut off and disposed of safely.

There is a danger of severe electrical shock if the cut off plug is inserted into any 13-ampere socket.

If a new plug is to be fitted please observe the wiring code as shown below.

If in any doubt, please consult a qualified electrician.

#### 2.3.2.1. Important

The wires in this mains lead are coloured in accordance with the following code:

Blue	Neutral
Brown	Live

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured BLUE must be connected to the terminal in the plug which is marked with the letter N or coloured BLACK.

The wire which is coloured BROWN must be connected to the terminal in the plug which is marked with the letter L or coloured RED.

Under no circumstances should either of these wires be connected to the earth terminal of the three pin plug, marked with the letter E or the Earth Symbol.

#### 2.3.2.2. Before use

remove the Connector Cover as follows.

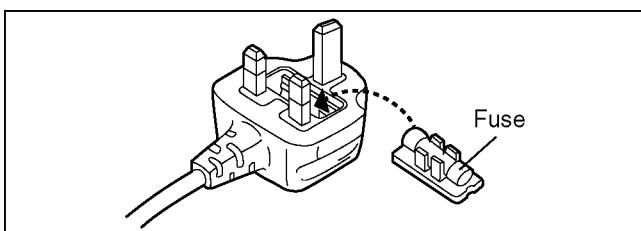

#### 2.3.2.3. How to replace the Fuse

1. Remove the Fuse Cover with a screwdriver.

2. Replace the fuse and attach the Fuse cover.

## 2.4. How to Replace the Lithium Battery (PROCEDURE)

1. Remove the Monitor P.C.B. (Refer to Disassembly Procedures.)
2. Unsolder the Lithium Battery "ML-614S/DN" and then replace the new one. (See Fig. B1)

### CAUTION

Danger of explosion if battery is incorrectly replaced.  
Replace only with the same or equivalent type.

### CAUTION

The battery used in this device may present a risk of fire or chemical burn if mistreated.  
Do not recharge, disassemble, heat above 100°C (212°F), or incinerate.  
Replace battery with Panasonic part number ML-614S/DN only.  
Use of another battery may present a risk of fire or explosion.  
Dispose of used battery promptly.  
Keep away from children.  
Do not disassemble and do not dispose of in fire.

Fig. B1

### Note:

The lithium battery is a critical component.

(Type No.: ML-614S/DN Manufactured by Energy Company, Panasonic Corporation)

It must never be subjected to excessive heat or discharge.

It must therefore only be fitted in equipment designed specifically for its use.

Replacement batteries must be of the same type and manufacture.

They must be fitted in the same manner and location as the original battery, with the correct polarity contacts observed.

Do not attempt to re-charge the old battery or re-use it for any other purpose.

It should be disposed of in waste products destined for burial rather than incineration.

(For English)

**CAUTION**

Danger of explosion if battery is incorrectly replaced.  
Replace only with the same or equivalent type recommended by the equipment manufacturer.  
Discard used batteries according to manufacturer's instructions.

(For French)

**PRÉCAUTION**

Le fait de remplacer incorrectement la pile peut présenter des risques d'explosion.  
Remplacer la pile uniquement par une pile identique ou de type équivalent recommandée par le fabricant. Se débarrasser des piles usagées conformément aux instructions du fabricant.

(For German)

**VORSICHT**

Bei einer falsch eingesetzten Batterie besteht Explosionsgefahr. Nur mit einer vom gleichen Typ ersetzen.  
Verbrauchte Batterien beim Fachhändler oder einer Sammelstelle für Sonderstoffe abliefern.

(For Swedish)

**WARNING**

Explosionsfara vid felaktigt batteribyte.  
Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren.  
Kassera använt batteri enligt fabrikantens instruktion.

(For Norwegian)

**ADVARSEL!**

Lithiumbatteri-Eksplorationsfare ved fejlagtig håndtering.  
Udskiftning må kun ske med batteri af samme fabrikat og type.  
Levér det brugte batteri tilbage til leverandøren.

(For Finnish)

**VAROITUS**

Paristo voi räjähtää, jos se on virheellisesti asennettu.  
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin.  
Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

**Note:**

Above caution is applicable for a battery pack which is for SDR-S70/S71/T70/T71/T76 series, as well.

## 2.5. How to Recycle the Lithium Battery (U.S. Only)

**U.S.A./CANADA CONSUMERS: ATTENTION:**

A lithium ion/polymer battery that is recyclable powers the product you have purchased. Please call 1-800-8-BATTERY for information on how to recycle this battery.

### **3 Service Navigation**

#### **3.1. Service Information**

This service manual contains technical information which will allow service personnel's to understand and service this model.

Please place orders using the parts list and not the drawing reference numbers.

If the circuit is changed or modified, this information will be followed by supplement service manual to be filed with original service manual.

##### **Notes 1:**

This service manual does not contain the following information, because of the impossibility of servicing at component level.

1. Schematic Diagram, Block Diagram and P.C.B. layout of Main P.C.B.
2. Parts List for individual parts of Main P.C.B.

## 3.2. How to Define the Model Suffix (NTSC or PAL model)

There are seven kinds of SDR-S70/S71/T70/T71/T76, regardless of the colours.

- a) SDR-S70P, SDR-S71P, SDR-T70P
- b) SDR-S70PC, SDR-T70PC
- c) SDR-S70EB/EC/EF/EG/EP, SDR-T70EB/EC/EF/EG/EP
- d) SDR-S71GA/GN, SDR-T76GA
- e) SDR-S70EE, SDR-T70EE
- f) SDR-S71GK
- g) SDR-S71GC/PU/PR, SDR-T71PU/PR, SDR-T76GC

What is the difference is that the "INITIAL SETTINGS" data which is stored in Flash ROM mounted on Main P.C.B.

### 3.2.1. Defining methods

To define the model suffix to be serviced, refer to the nameplate which is putted on the bottom side of the Unit.

#### a) SDR-S70P, SDR-S71P, SDR-T70P

The nameplate for this model shows the following

Safety registration mark.

#### b) SDR-S70PC, SDR-T70PC

The nameplate for these models show the following

Safety registration mark.

#### c) SDR-S70EB/EC/EF/EG/EP, SDR-T70EB/EC/EF/EG/EP

The nameplate for these models show the following

Safety registration mark.

#### d) SDR-S71GA/GN, SDR-T76GA

The nameplate for this model show the following

Safety registration mark.

#### e) SDR-S70EE, SDR-T70EE

The nameplate for this model show the following

Safety registration mark.

#### f) SDR-S71GK

The nameplate for these models show the following

Safety registration mark.

#### g) SDR-S71GC/PU/PR, SDR-T71PU/PR, SDR-T76GC

The nameplate for these models do not show any  
above safety registration mark.

#### Note:

After replacing the MAIN P.C.B., be sure to achieve adjustment.

The adjustment instruction is available at "software download" on the "Support Information from NWBG/VDBG-AVC" web-site in "TSN system", together with Maintenance software.

# 4 Specifications

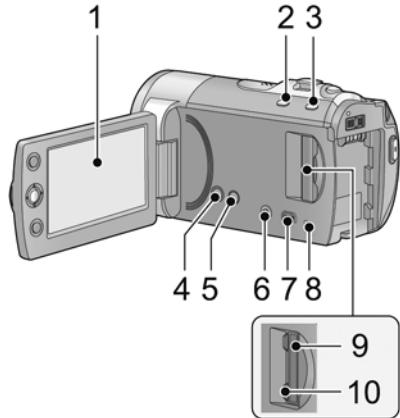

## SD Video Camera

## 5 Location of Controls and Components

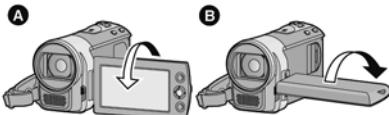

Followings are the Location of Controls and Components for SDR-S70P/PC, S71P, T70P/PC, H100/P/PC as a sample.  
For other models, refer to each Operating Instructions.

- 1 LCD monitor**  
• Pull the LCD monitor out in the direction of the arrow with your fingers.

- It can open up to 90°.

- It can rotate up to 180° **A** towards the lens or 90° **B** towards the opposite direction.  
• The brightness and color level of the LCD monitor can be adjusted.

Due to limitations in LCD production technology, there may be some tiny bright or dark spots on the LCD monitor screen. However, this is not a malfunction and does not affect the recorded picture.

- 2 Intelligent auto/Manual button [iA/MANUAL]**  
**3 Optical image stabilizer button [O.I.S.]**  
**4 Power button [I/II]**  
**5 Delete button [ ]/ Light/Delete button [LIGHT/ ] (SDR-S71)**  
**6 Audio-video output terminal [A/V]**  
• Use the AV cable (only the supplied cable).  
**7 USB terminal [ ]**  
**8 Access lamp [ACCESS]**  
**9 SD card slot**  
**10 SD card cover [SD CARD]**

- 11 Video light (SDR-S71)**  
**12 Lens cover**  
**13 Lens**  
**14 Open/close switch for the lens cover**  
 For the lens protection, be sure to close the lens cover when not in use.  
**Slide open/close switch for the lens cover.**

**15 Microphone (built-in, stereo)**

- 16 AF/AE button [AF/AE]**  
**17 Joystick**  
 Use the joystick to select the recording functions and playback operations, and to operate the menu screen.  
**Move the joystick up, down, left, or right to select a setting or scene and then press the joystick to set it.**

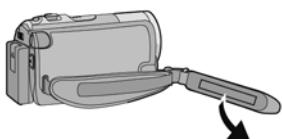

- ① Select by moving up, down, left or right.
  - ② Set by pressing the center.
  - Menu screen operations
  - To select the recording functions
  - To adjust manually
  - Playback operations
- 18 Mode switch**  
**19 Recording start/stop button**  
**20 Menu button [MENU]**  
**21 Battery holder**

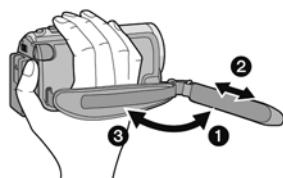

**(U.S.A. only):**

When this unit is purchased, a sensor tag is attached to the grip belt. Remove the tag before use.

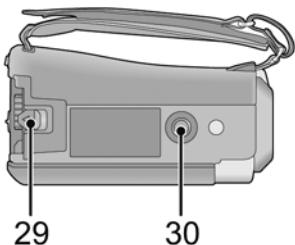

- 22 Photoshot button [CAM]
- 23 When recording: Zoom lever [W/T]  
When playing back: Thumbnail display switch [THUMBNAIL / INDEX]
- 24 Speaker
- 25 Status indicator
- 26 HDD access lamp [ACCESS HDD] (SDR-H100)
- 27 DC input terminal [DC IN]

- Do not use any other AC adaptors except the supplied one.
- 28 Grip belt  
Adjust the belt length and the pad position.

- 29 Battery release lever [BATTERY]
- 30 Tripod receptacle

# 6 Service Mode

## Note:

The screens of the service mode are for SDR-T71PU.

For other models, refer to each screen of the service mode.

### 1. Indication method of the service menu

Set the mode switch "Recording" mode.

- While keep pressing the "Intelligent auto/Manual" button and "Menu" button, hold left the Zoom Lever towards to "[ W ]" position for more than 3 seconds until the top screen of the Service Menu being displayed.

### Service mode menu

Screen display	Contents	Function
1	Factory settings	Function to throw a product up in a factory shipment state
3	Self check execution	Function to check self as for the state of eSD
4	Lock search history indication	Display an error code for three histories saved in EEPROM
5	Power ON self check result display	Power ON self check (function to diagnose correct function of the device and interface between devices) result display
10	Lock search history clear	An error code for three histories in EEPROM is cleared

## Note:

Do not using service mode except above table of Service Menu.

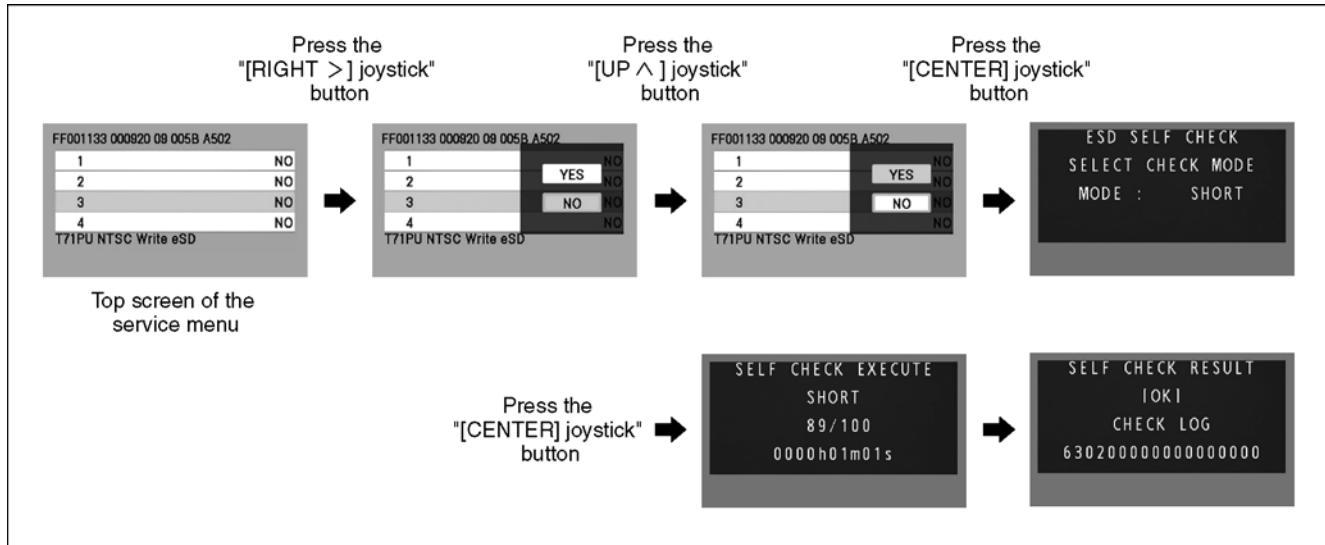

### 3. End method of the top screen of the service menu

Push the menu button to end the service mode, and then POWER OFF.

## 6.1. eSD Self Check

1. Select [ 3 ] eSD self check.

### Operation specifications

### Indication contents

- eSD self check result display

Display the eSD self check result information.

Displays other than "OK" are abnormalities of eSD.

Push the menu button to end the service mode, and then POWER OFF.

## 6.2. Lock Search History Indication

1. Select [ 4 ] Lock search history indication.

### Operation specifications

### Indication contents

- Lock search history indication

Display the camera system error code for three histories saved in EEPROM.

- The error code contents which are displayed

Error code	Function
51	Focus control is abnormal
52	Zoom control is abnormal
53	OIS lens control is abnormal
73	High temperature is abnormal
33	Communication between camera to ARM is abnormal (Check the peripheral circuits of IC2006 and IC3401.)

Lock search history indication is finished by POWER OFF.

## 6.3. Power ON Self Check Result Display

1. Select [ 5 ] Power ON self check result display.

### Operation specifications

### Indication contents

- Power ON self check result display

Function to diagnose correct function of the device and interface between devices result display.

Display the following communication test result.

- CAM-PWR : Communication test between IC2006 to IC1503
- CAM-UNI : Communication test between IC2006 to IC3401

Display other than "OK" are abnormalities of each lines.

Power ON self check result display is finished by POWER OFF.

## 6.4. Lock Search History Clear

1. Select [ 10 ] Lock Search History Clear.

### Operation specifications

- Lock Search History Clear

An error code for three histories in EEPROM is cleared.

Push the menu button to end the service mode, and then POWER OFF.

## 7 Service Fixture & Tools

### 7.1. Service Tools and Equipment

Parts Name	Parts No.	Q'ty	Remarks
PC	---	1	
AC Adaptor	---	1

## 8.4. Disassembly Procedures of Camera Lens Unit

The following flowchart describes order or steps for removing the Camera lens unit and certain printed circuit boards in order to make access to the item needing service.

To reassemble the unit follow the steps in reverse order.

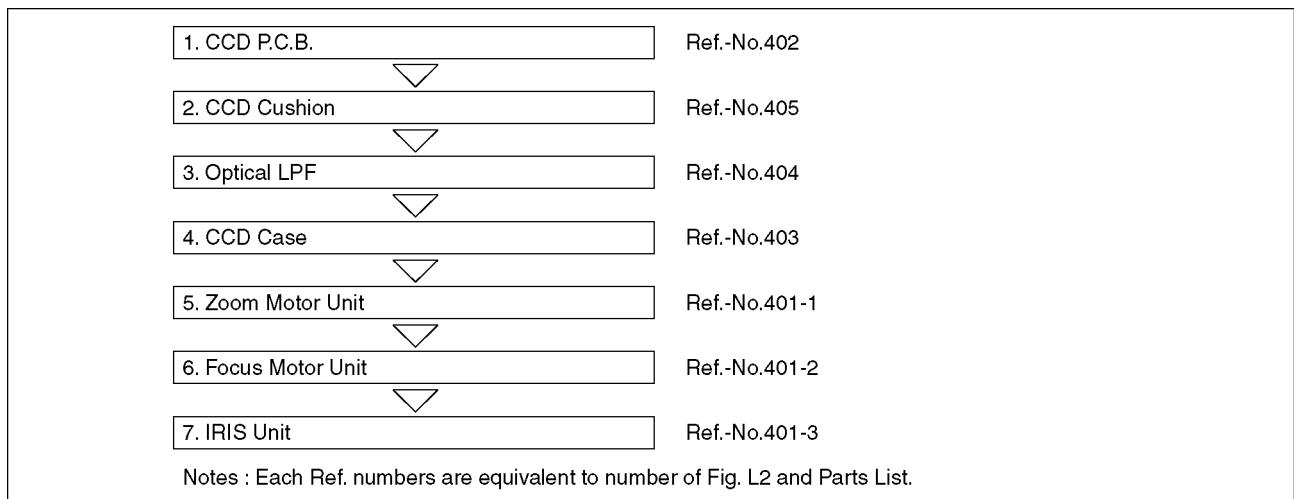

Fig. L1

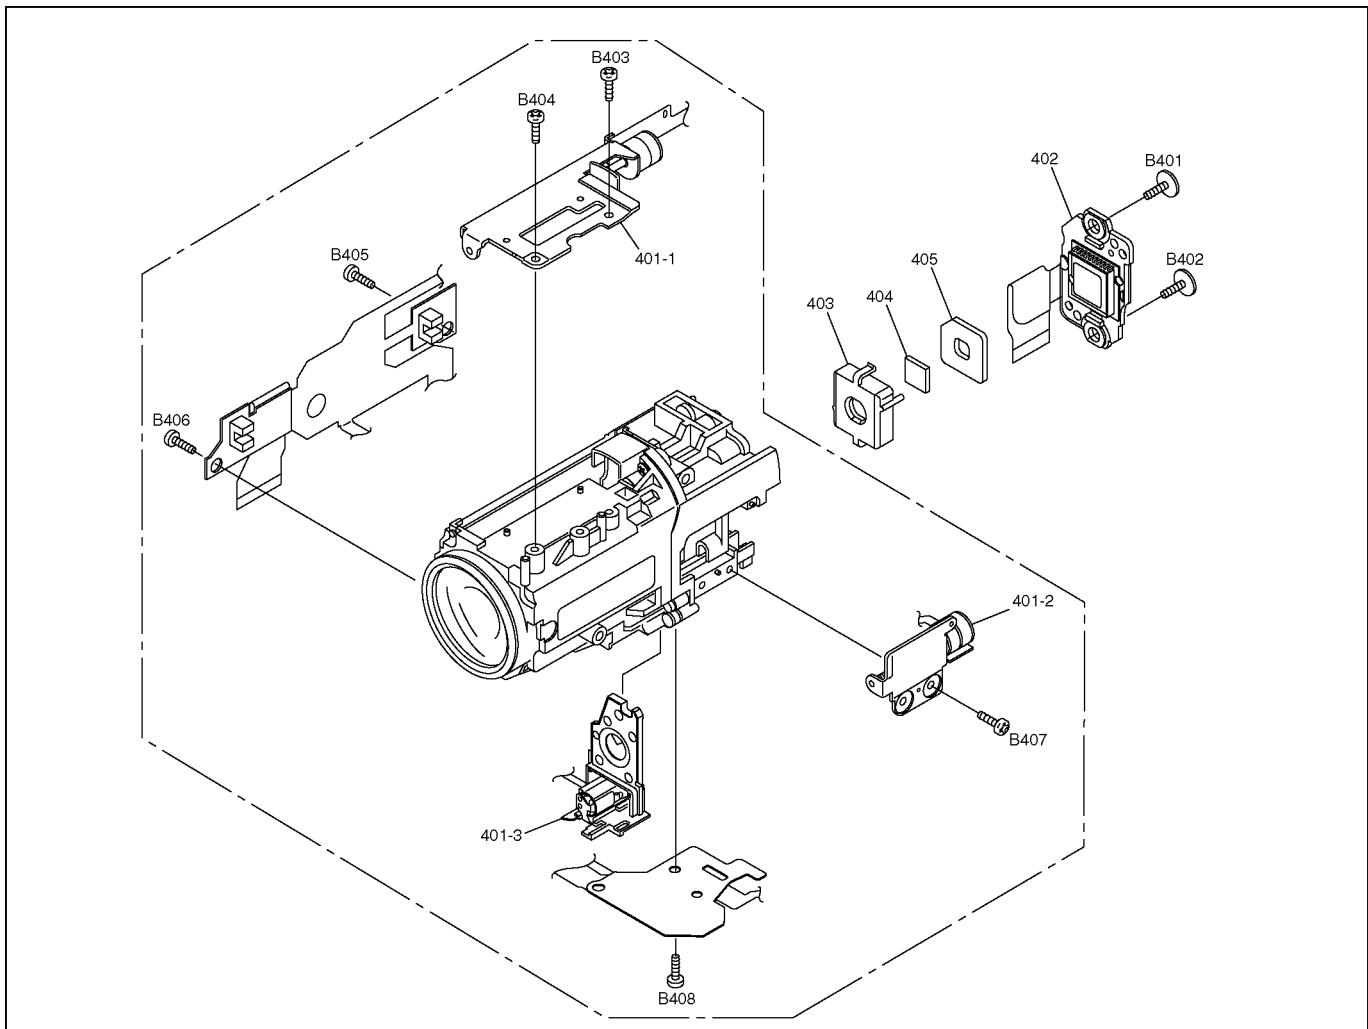

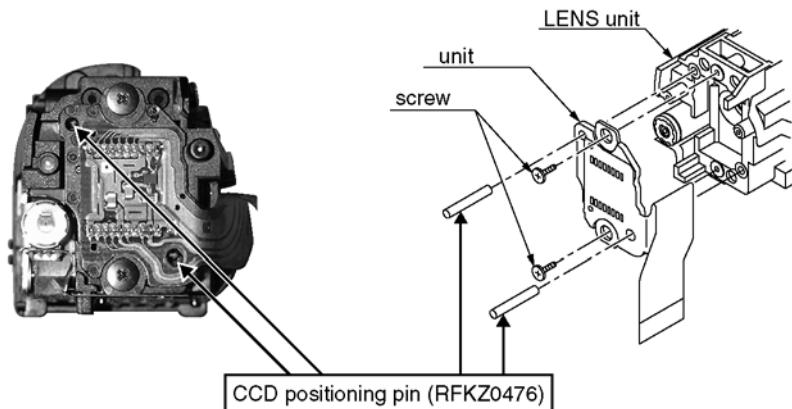

Fig. L2

#### 8.4.1. How to use of CCD positioning pin (RFKZ0476)

The CCD unit and the LENS unit are fixed by using two CCD positioning pins as shown in figure, and the screw two places for CCD fixation are tightened.

**Note:**

Please remove the positioning pin after installing CCD Unit.

Please tighten tightening two screws uniformly.

(Recommendation 8Ncm : In the torque driver at the time of tightening)

Please execute an optical adjustment for TATSUJIN Software after it exchanges CCD unit.

## 9 Measurements and Adjustments

### 9.1. EEPROM Data for spare parts of the MAIN P.C.B.

After replacing the MAIN P.C.B., be sure to achieve adjustment.

As for Adjustment condition/procedure, consult the "Adjustment Manual" which is available in Adjustment software.

The adjustment instruction is available at "Software download" on the "Support Information from NWBG/VDBG-AVC" web-site in "TSN System".

### 9.2. Service Positions

#### 9.2.1. List of the extension cables

Use the following extension cables when checking or adjusting individual circuit boards except module Parts (Main P.C.B.).

Ref.	Part No.	Pin	Part Name	Connection		Q'ty
1	VFK1480	6	Flat Cable	FP6009 (Main)	- Front Case/Mic Unit	1
2	VFK1491	27	Flat Cable	FP6001 (Main)	- Side Case/LCD Unit	1
3	VFK1950	33	Flat Cable	FP6008 (Main)	- Lens Unit	1
4	VFK1443	18	Flat Cable	FP6007 (Main)	- CCD Unit	1
5	VFK1282	22	Flat Cable	FP6004 (Main)	- FP3901 (Rear)	1
6	RFKZ0379	40	Flat Cable	PP6002 (Main)	- FP6701 (DC BATT OP FPC)	1

## 9.2.2. Checking and repairing individual circuit boards

How to use extension cables.

## 9.3. Location for Connectors of the Main P.C.B.

### 9.3.1. Main P.C.B.

(COMPONENT SIDE)

(FOIL SIDE)

## 9.4. Electrical Adjustment

- Adjustment method is different from a conventional SD video camera.
- An exclusive jig and PC (including software for adjustment "tatsujin") are necessary for electric adjustment.
- A USB driver for service is necessary to communication with PC.
- Connection method of the main unit and an exclusive adjustment jig as follows.

### 9.4.1. Adjustment Procedure

- Connect the main unit to PC with USB.

The adjustment instruction is available at "Software download" on the "Support Information from NWBG/VDBG-AVC" web-site in "TSN System".

Figure of connection

Figure of Image when adjustment

#### Part Number of jig

- Only a necessary jig mentions its setup for electric adjustment

Ref	Parts Name	Parts No.	Q'ty	Remarks
1	Personal Computer	---	1	With Tatsujin Software
2	AC Adaptor	---	1	The AC Adaptor for SD Video Camera
3	USB Cable	---	1	
4	Adjustment Software (Tatsujin)	---	1	

## Adjustment Items

- Adjustment item as follows.

The adjustment instruction is available at "Software download" on the "Support Information from NWBG/VDBG-AVC" web-site in "TSN System".

Adjustment Item		Main P.C.B.	IC101 (CAMERA SIGNAL PROCESS)	IC701 (FOCUS/ZOOM/MOTOR DRIVE & OIS/IRIS/HALL AMP CONTROL)	IC3401 (CAMERA DIGITAL SIGNAL PROCESS/HUFFLING)	IC3701 (VIDEO/AUDIO SIGNAL PROCESS)	IC6001 (SYSTEM MICROCONTROLLER)	IC2002 (EEPROM)	CCD P.C.B.	Lens Unit

Note :  : Adjustment Item

- How to use the software.

Please reference help of the TATSUJIN software.

## Set-up manual for SD Video Camera

### 1. Installation of USB-SERIAL Driver

Execute the "Setup.exe" file in "Com Mass" folder by double clicking to install the USB-SERIAL driver.

### 2. Set-Up

a. Remove the SD card from this unit.

b. While keep pressing the "iA" button and "DEL" button, hold left the "zoom lever" towards to "W" position for more than 3 seconds until the "COM" is displayed on LCD.

### 3. Release of COM mode (It is necessary for normal mode.)

Retry above 2-b, then "COM" is disappeared.

# 10 Maintenance

## 10.1. Cleaning Lens and LCD Panel

Do not touch the surface of the lens and LCD Panel with your hand.

When cleaning the lens, use air-Blower to blow off the dust.

When cleaning the LCD Panel, dampen the lens cleaning paper with lens cleaner, and gently wipe their surface.

**Note:**

A lens cleaning paper and lens cleaner are available at local camera shops and market place.

# 11 Factory Setting

## Note:

The screens of the factory setting are for SDR-T71PU.

For other models, refer to each screen of the factory setting.

## 11.1. How to turn on the factory setting?

### 1. Indication method of the service menu

Set the mode switch "Recording" mode.

2. While keep pressing the "Intelligent auto/Manual" button and "Menu" button, hold left the Zoom Lever towards to "[ W ]" position for more than 3 seconds until the top screen of the Service Menu being displayed.

3. Under the condition of the Item No."1" is yellow high lighted, press the "[RIGHT >]" of joystick button.
4. By pressing the "[UP ^]" of joystick button, then press the "[center]" of joystick button.
5. After few seconds "END" is displayed on LCD monitor.Cutting of battery connection or AC power supply connection as a completion of the "FACTORY SETTINGS".

## 11.2. What is the factory settings?

The factory settings clean up and/or refresh the following settings.

1. MENU, MODE, ADJUSTMENT VALUE.
2. SD card format.
3. Reset the folder number and file number of still pictures.  
(Setting the folder number is 100, and file number is 0.)
4. Clear the mechanism lock information.
5. Clear the service mode information contents.
6. Clear the date.
7. Initialize the VIERA Link Physical Address.

**The setting position of factory settings:**

Name	Setting position
Mode switch	
Open/close switch	

# Service Manual

## S1. About Indication of The Schematic Diagram

### S1.1. Important Safety Notice

COMPONENTS IDENTIFIED WITH THE MARK HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY. WHEN REPLACING ANY OF THESE COMPONENTS USE ONLY THE SAME TYPE.

- 1.Although reference number of the parts is indicated on the P.C.B. drawing and/or schematic diagrams, it is NOT mounted on the P.C.B. when it is displayed with "\$" mark.
- 2.It is only the "Test Round" and no terminal (Pin) is available on the P.C.B. when the TP (Test Point) indicated as "●" mark.
- 3.The voltage being indicated on the schematic diagram is measured in "Standard-Playback" mode when there is no specify mode is mentioned.
- 4.Although the voltage and waveform available on here is measured with standard frame, it may be differ from actual measurement due to modification of circuit and so on.
- 5.The voltage being indicated here may be include observational-error (deviation) due to internal-resistance and/or reactance of equipment. Therefore, handle the value indicated on here as reference.
- 6.Use the parts number indicated on the Replacement Parts List .
- 7.Indication on Schematic diagrams:

## S2. Voltage Chart

Note) Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard.  
Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.

## S6. Replacement Parts List

- Note:
- 1.\* Be sure to make your orders of replacement parts according to this list.
  2. **IMPORTANT SAFETY NOTICE**  
Components identified with the mark  have the special characteristics for safety.  
When replacing any of these components, use only the same type.
  3. Unless otherwise specified,  
All resistors are in OHMS, K=1,000 OHMS. All capacitors are in MICRO-FARADS (uf), P=uuF.
  4. The marking (RTL) indicates the retention time is limited for this item. After the discontinuation  
of this assembly in production, it will no longer be available.

**E.S.D. standards for Electrostatically Sensitive Devices, refer to “PREVENTION OF ELECTROSTATIC DISCHARGE (ESD) TO ELECTROSTATICALLY SENSITIVE (ES) DEVICES” section.**
