

Service Manual

Portable Stereo CD System

RX-ES29GC
RX-ES29GS
RX-ES29GT

Colour

(S).....Silver Type

Specification

n RADIO

Frequency range	
FM	87.50-108.00 MHz (50 kHz steps)
AM	522-1629 kHz (9 kHz steps) 520-1630 kHz (10 kHz steps)

n CD PLAYER

Sampling frequency	44.1 kHz
Decoding	16 bit linear
Beam source	Semiconductor laser (wavelength 780 nm)
No. of channels	2 channel, stereo
Wow and flutter	Below measurable limit
D/A converter	MASH (1 bit DAC)

n TAPE RECORDER

Track system	Stereo
Monitor system	Variable sound monitor
Recording system	AC bias
Erasing system	Multi Pole magnet
Frequency range	
Normal position	50-14000 Hz

n GENERAL

Speakers	8 cm 5.4Ω x 2
----------	---------------

Jacks	
Output	Phones: 3.5 mm stereo (16-32Ω)
Power requirement (For GC/GS)	
AC	110-127 V / 220-240 V, 50/60 Hz
Power consumption	33 W
Power requirement (For GT)	
AC	110 V, 60 Hz
Power consumption	32 W
Battery	12 V [Eight R20/LR20 (D, UM-1) batteries]
	Do not use rechargeable type batteries
Memory backup for computer/clock	6 V [Four R6/LR6 (AA, UM-3) batteries]
	Do not use rechargeable type batteries
Dimensions	529 mm (W) x 144 mm (H) x 276 mm (D)
Mass (For GC/GS)	4.4 kg without batteries
Mass (For GT)	4.2 kg without batteries
Power consumption in standby mode (For GC/GS)	3.0 W (117 V) 3.5W (240 V)
Power consumption in standby mode (For GT)	2.7 W

Notes:

1. Specifications are subject to change without notice.
2. Mass and dimensions are approximate.

⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

1 Safety Precautions

1.1. GENERAL GUIDELINES

1. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
2. After servicing, ensure that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
3. After servicing, check for leakage current checks to prevent from being exposed to shock hazards.

1.1.1. LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Using an ohmmeter measure the resistance value, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between $1M\Omega$ and 5.2Ω .

When the exposed metal does not have a return path to the chassis, the reading must be ∞ .

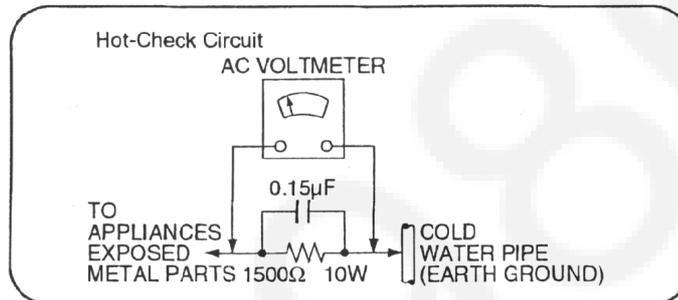

Fig. 1

1.1.2. LEAKAGE CURRENT HOT CHECK (See Figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a 1.5kΩ, 10 watts resistor, in parallel with a 0.15µF capacitors, between each exposed metallic part on the set and a good earth ground such as a water pipe, as shown in Figure 1.
3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 volts RMS. A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed 1/2 milliamp. Should the measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and re-checked before it is returned to the customer.

2 Caution for AC Mains Lead

Before use

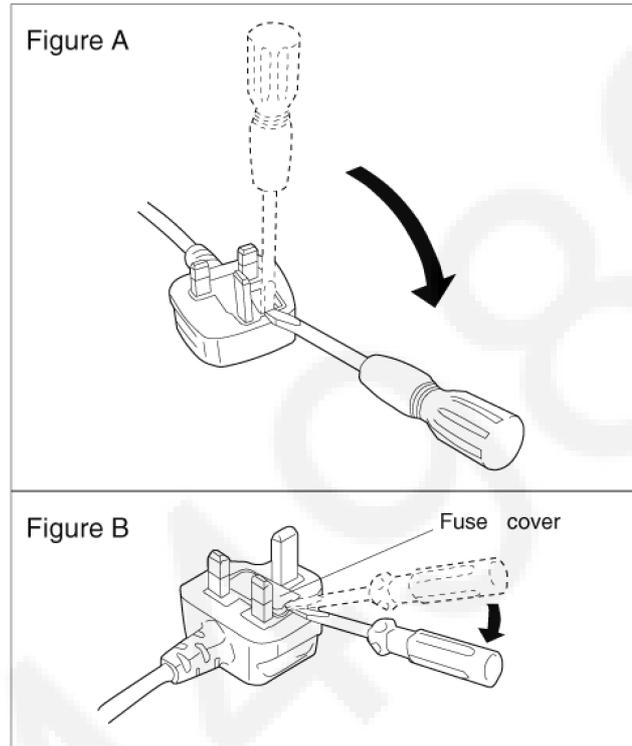

Remove the connector cover.

How to replace the fuse

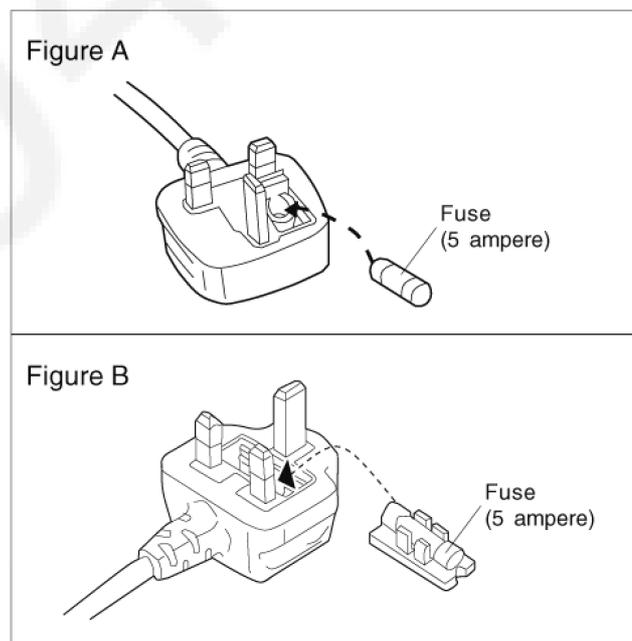

The location of the fuse differ according to the type of AC mains plug (figures A and B). Confirm the AC mains plug fitted and follow the instructions below.

Illustrations may differ from actual AC mains plug.

1. Open the fuse cover with a screwdriver.

2. Replace the fuse and close or attach the fuse cover.

3 Before Use

Be sure to disconnect the mains cord before adjusting the voltage selector. Use a minus (-) screwdriver to set the voltage selector (on the rear panel) to the voltage setting for the area in which the unit will be used.

(If the power supply in your area is 117V or 120V, set to the "127V" position.)

Note that this unit will be seriously damaged if this setting is not made correctly. (There is no voltage selector for some countries; the correct voltage is already set.)

4 Before Repair and Adjustment

Disconnect AC power, discharge Power Supply Capacitors C131, C231, C301, C307, C309, C310 and C331 through a 10 Ω , 1 W resistor to ground. DO NOT SHORT-CIRCUIT DIRECTLY (with a screw driver blade, for instance), as this may destroy solid state devices.

After repairs are completed, restore power gradually using a variac, to avoid overcurrent.

(For GC/GS) Current consumption at AC 220-240 V / 117 V, 50/60 Hz in NO SIGNAL mode should be ~180 mA, ~200mA respectively.

(For GT) Current consumption at AC 110 V, 60 Hz in NO SIGNAL mode should be ~150 mA respectively.

5 Protection Circuitry

The protection circuitry may have operated if either of the following conditions are noticed:

- No sound is heard when the power is turned on.
- Stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of the amplifier are used.

If this occurs, follow the procedure outlines below:

1. Turn off the power.
2. Determine the cause of the problem and correct it.
3. Turn on the power once again after one minute.

Note:

When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.

6 Handling the Lead Solder

6.1. About lead free solder (PbF)

Distinction of PbF P.C.B. :

P.C.B.s (manufactured) using lead free solder will have a PbF stamp on the P.C.B.

Caution:

- Pb free solder has a higher melting point than standard solder; Typically the melting point is 50 - 70°F (30 - 40°C) higher. Please use a high temperature soldering iron. In case of the soldering iron with temperature control, please set it to 700 \pm 20°F (370 \pm 10°C).
- Pb free solder will tend to splash when heated too high (about 1100°F/600°C).
- When soldering or unsoldering, please completely remove all of the solder on the pins or solder area, and be sure to heat the soldering points with the Pb free solder until it melts enough.

7 Precaution of Laser Diode

CAUTION:

This unit utilizes a class 1 laser.

Invisible laser radiation is emitted from the optical pickup lens.

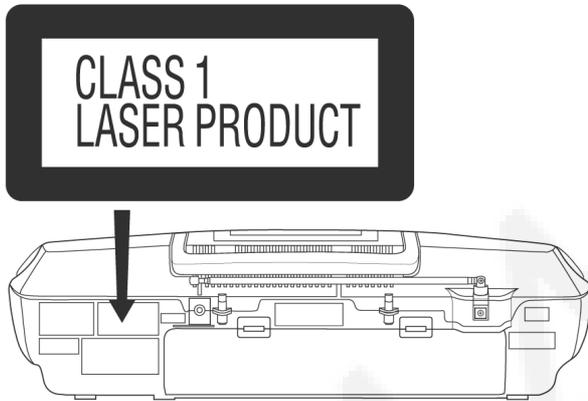

When the unit is turned on:

1. Do not look directly into the pick up lens.
2. Do not use optical instruments to look at the pick up lens.
3. Do not adjust the preset variable resistor on the pickup lens.
4. Do not disassemble the optical pick up unit.
5. If the optical pick up is replaced, use the manufacturer's specified replacement pick up only.
6. Use of control or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

CAUTION!

THIS PRODUCT UTILIZES A LASER.

USE OF CONTROLS OR ADJUSTMENTS OR PERFORMANCE OF PROCEDURES OTHER THAN THOSE SPECIFIED HEREIN MAY RESULT IN HAZARDOUS RADIATION EXPOSURE.

DANGER	INVISIBLE LASER RADIATION WHEN OPEN. AVOID DIRECT EXPOSURE TO BEAM.
ADVARSEL	USYNLIG LASERSTRÅLING VED ÅBNING, NÅR SIKKERHEDSafbrydere ER LIDE AF FUNKTION. UNDGÅ UDSÆTTELSE FOR STRÅLING.
VARO!	AVATTAESSA JA SUOJALUKITUS OHITETTAESSA OLET ALTIINA NÄKYMÄTÖNTÄ LASERSÄTEILYLLE. ÄLÄ KATSO SÄTEESEEN.
VARNING	OSYNLIG LASERSTRÅLNING NÅR DENNA DEL ÄR ÖPPNAD OCH SPÄRREN ÄR URKOPPLAD. BETRÄKTA EJ STRÅLEN.
ADVARSEL	USYNLIG LASERSTRÅLING NÅR DEKSEL ÅPNES OG SIKKERHEDSLÅS BRYTES. UNNGÅ EKSPONERING FOR STRÅLEN.
VORSICHT	UNSIHTBARE LASERSTRAHLUNG, WENN ABDECKUNG GEÖFFNET, NICHT DEM STRAHL AUSSETZEN.

Inside of product

8 Handling Precautions For Traverse Deck

The laser diode in the traverse deck (optical pickup) may break down due to potential difference caused by static electricity of clothes or human body.

So, be careful of electrostatic breakdown during repair of the traverse deck (optical pickup).

I Handling of CD traverse deck (optical pickup)

1. Do not subject the traverse deck (optical pickup) to static electricity as it is extremely sensitive to electrical shock.
2. The short land between the No.4 (LD) and No.5 (GND) pins on the flexible board (FFC) is shorted with a solder build-up to prevent damage to the laser diode.
3. Take care not to apply excessive stress to the flexible board (FFC board) (Fig 8.1).
4. Do not turn the variable resistor (laser power adjustment). It has already been adjusted.

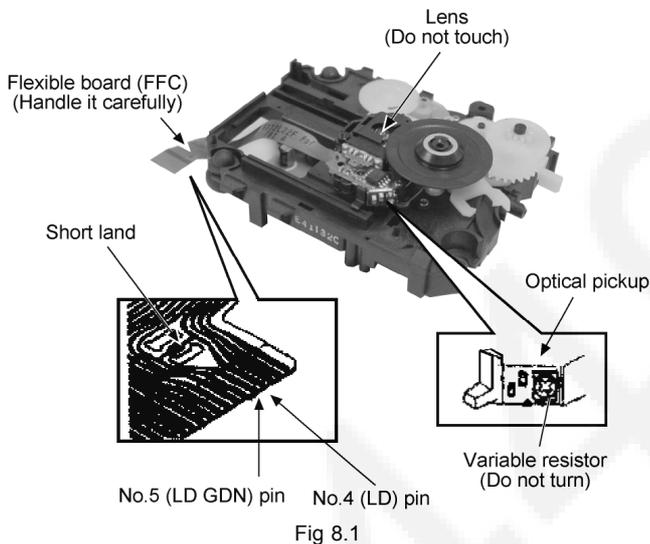

Fig 8.1

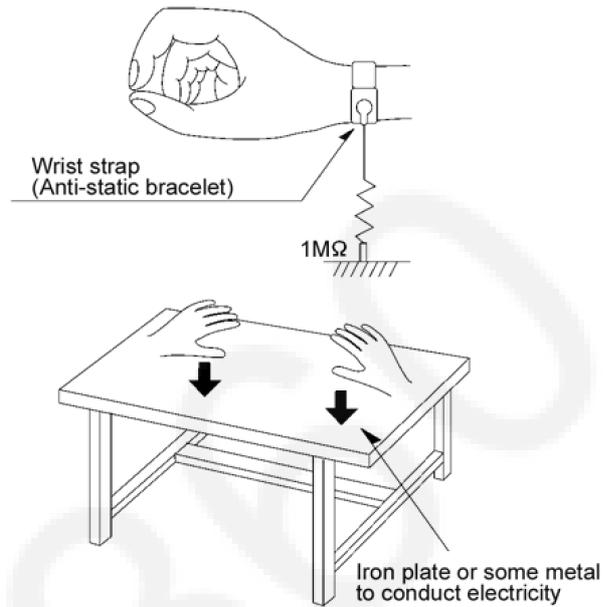

Fig 8.2

Caution when Replacing the Optical Pickup :

The traverse has a short point shorted with solder to protect the laser diode against electrostatics breakdown. Be sure to remove the solder from the short point before making connections.

I Grounding for electrostatic breakdown prevention

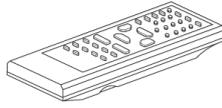

1. Human body grounding (Fig 8.2)
Use the anti-static wrist strap to discharge the static electricity from your body.
2. Work table grounding (Fig 8.2)
Put a conductive material (sheet) or steel sheet on the area where the traverse deck (optical pickup) is placed, and ground the sheet.

Caution :

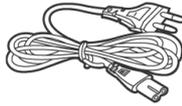

The static electricity of your clothes will not be grounded through the wrist strap. So, take care not to let your clothes touch the traverse deck (optical pickup).

9 Accessories

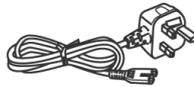

Note : Refer to Packing Materials & Accessories Parts List (Section 25.5) for the part number.

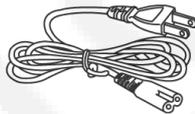

Remote Control.....1pc

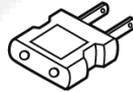

AC cord.....1 pc (For GC)

AC cord.....1 pc (For GS)

AC cord.....1 pc (For GT)

AC cord adaptor.....1 pc (For GC)

10 Operation Procedures

10.1. Main unit

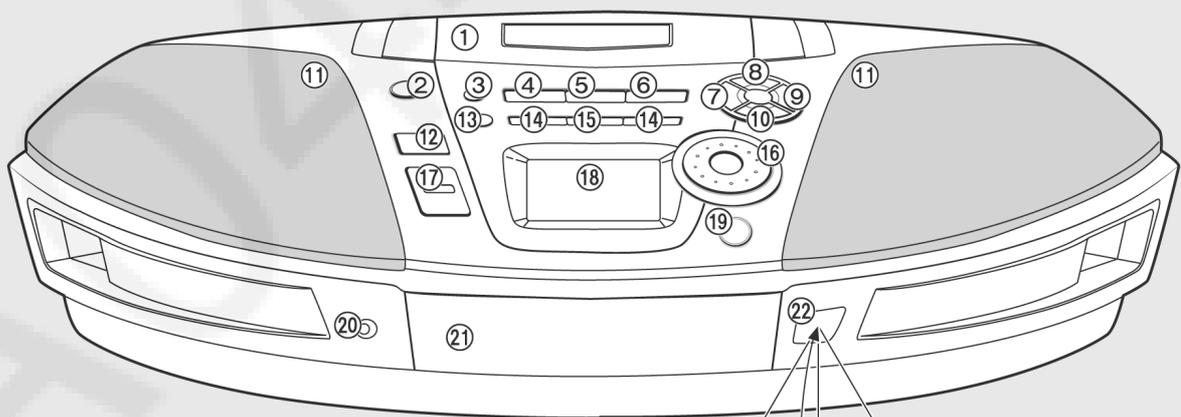

- ① Deck
- ② Deck eject button (▲ DECK)
 - Press [▲ DECK] to open the deck.
(The unit comes on.)
Then, load a cassette and close the deck by hand.
- ③ Record/record pause button (●/||)
- ④ Cassette play button (▶ TAPE)
 - Press [▶ TAPE] to start play.
- ⑤ Band button (TUNER BAND)
 - Press [TUNER BAND] to select “FM” or “AM”.
- ⑥ CD play/pause button (CD ▶/||)
 - Press [CD ▶/||] to start play.
Plays to the end of the CD and stops.
 - Press [CD ▶/||] to pause halfway during play.
Press again to resume play.
- ⑦ CD recording mode button (CD REC MODE)
- ⑧ Play timer/record timer button (⊖ PLAY/REC)
- ⑨ Clock/timer button (CLOCK/TIMER)
- ⑩ CD program/clear, tuner preset button
(• MEMORY - CLEAR)
- ⑪ Speaker

Note:

 - These speakers do not have magnetic shielding.
Do not place them near televisions, personal computers or other devices easily influenced by magnetism.
- ⑫ Standby/on switch (⏻/⏻)

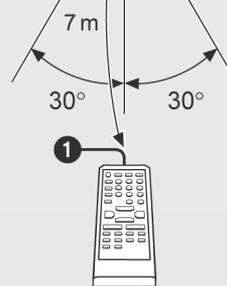

Press to switch the unit from on to standby mode or vice versa. In standby mode, the unit is still consuming a small amount of power.
- ⑬ Sound equalizer button (SOUND EQ)
- ⑭ Tuning/CD search, Rewind/fast-forward, Album skip buttons (REW/-/◀◀, ▶▶/+/FF)
- ⑮ Tape/CD mode select/stop button (■ TAPE/CD)
 - Press [■ TAPE/CD] to stop play.
- ⑯ Time adjust, Preset channel select/CD track select dial (TIME/PRESET TUNE ← TRACK SKIP →)
- ⑰ Volume control buttons (+, - VOLUME)
 - Press [+ , - VOLUME] to adjust to the desired volume for CD, Tuner or Cassette.
- ⑱ Display panel
 

e.g. CD
- ⑲ CD tray open/close button (▲ CD)
 - Press [▲ CD] to open the tray.
(The unit comes on.)
Load a CD and press [▲ CD] to close the tray.
- ⑳ Standby indicator (⏻)
- ㉑ CD tray
- ㉒ Remote control signal sensor (SENSOR)

Use

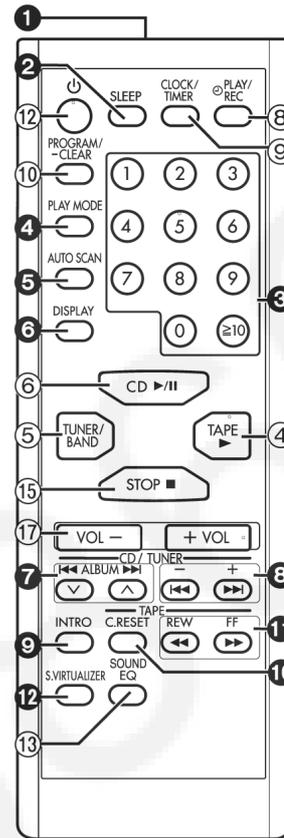

- Keep the transmission window and the unit's sensor free from dust.
- Operation can be affected by strong light sources, such as direct sunlight, and the glass doors of cabinets.

10.2. Remote control

Remote Control

- 1** **Transmission window**
Aim at the sensor, avoiding obstacles, at a maximum range of 7 meters directly in front of the unit.
- 2** **Sleep timer button (SLEEP)**
- 3** **Numeric buttons**
- 4** **CD/MP3 play mode/FM mode button (PLAY MODE)**
- 5** **Auto scan button (AUTO SCAN)**
- 6** **Display select button (DISPLAY)**
• Press [DISPLAY] to display the clock on the Display panel ⑩.
- 7** **Preset channel select/album skip buttons (V/|◀◀ ALBUM, ALBUM▶▶/^)**
- 8** **Tuning/CD skip, search/MP3 track skip/clock/timer adjust buttons (-/|◀◀, ▶▶/|+)**
- 9** **MP3 intro play button (INTRO)**
- 10** **Tape counter reset button (C.RESET)**
• Press [C.RESET] to reset the tape counter.
The counter resets to "000".
- 11** **Tape rewind/fast-forward buttons (◀◀/REW, ▶▶/FF)**
- 12** **Sound virtualizer button (S.VIRTUALIZER)**

11 Information on MP3

This unit can play MP3, a method of compressing audio without affecting audio quality.

■ **When creating MP3 files to play on this unit**

Disc format: ISO9660 level 1 and level 2 (except for extended formats)

Title names and album names are not displayable on this unit.

■ **Limitation on MP3**

- This unit is compatible with multi-session but if there are a lot of sessions it takes more time for play to start. Keep the number of sessions to a minimum to avoid this.
- This unit cannot play files recorded using packet write.
- If a CD-ROM format CD contains MP3 and files other than MP3, only the MP3 files will be playable.
- Depending on how you create MP3 files, they may not play in the order you numbered them or may not play at all.

MPEG Layer-3 audio decoding technology licenced from Fraunhofer IIS and Thomson multimedia.

12 Disassembly and Main Component Replacement Procedures and Operational Check

“ATTENTION SERVICER”

Some chassis components may be have sharp edges. Be careful when disassembly and servicing.

1. This section describes procedures for checking the operation of the major printed circuit boards and replacing the main components.
2. For reassembly after operation checks or replacement, reverse the respective procedures.
Special reassembly procedures are described only when required.
3. Select items from the following index when checks or replacement are required.

Warning:

This product uses a laser diode. Refer to “Precaution of Laser Diode”.

12.1. Disassembly procedures

12.3. Checking Procedure for each major P.C.B.

12.3.1 Disassembly of Top Cabinet Unit.

12.3.2 Disassembly of Panel P.C.B.

12.3.3 Disassembly of Speakers.

12.3.4 Disassembly of Deck Mechanism.

12.3.5 Disassembly of Main, Standby LED, Power On and Sensor P.C.B.

12.3.6 Disassembly of Battery and Power P.C.B.

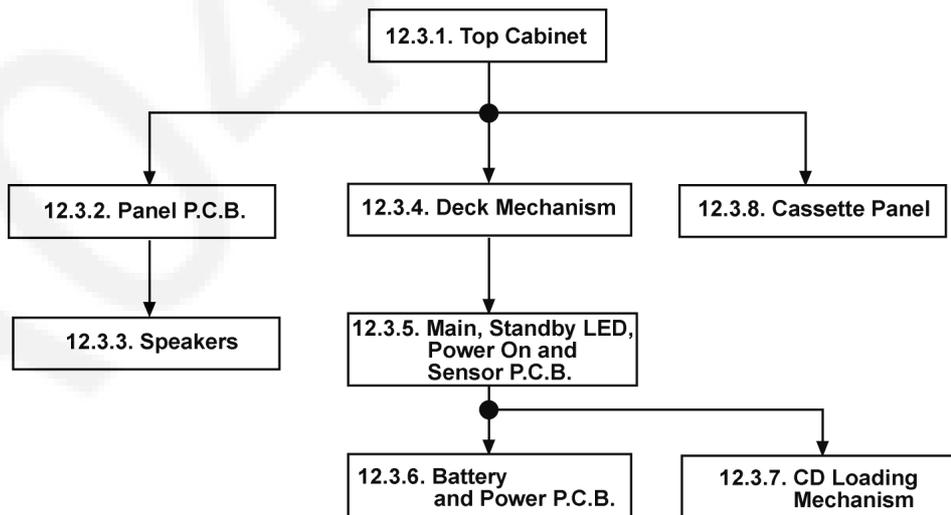

12.3.7 Disassembly of CD Loading Mechanism.

12.3.8 Replacement of Cassette Panel.

12.2. Disassembly flow chart

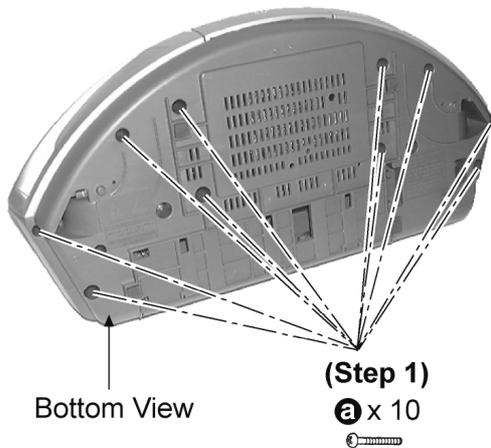

The following chart is the procedure for disassembling the unit and inside parts for internal inspection when carrying out the servicing.

To assemble the unit, reverse the steps shown in the chart below.

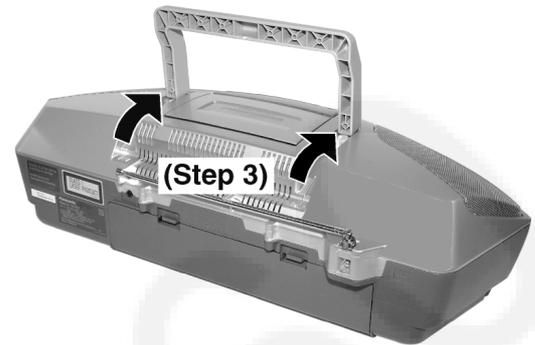

12.3. Checking Procedure for each major P.C.B.

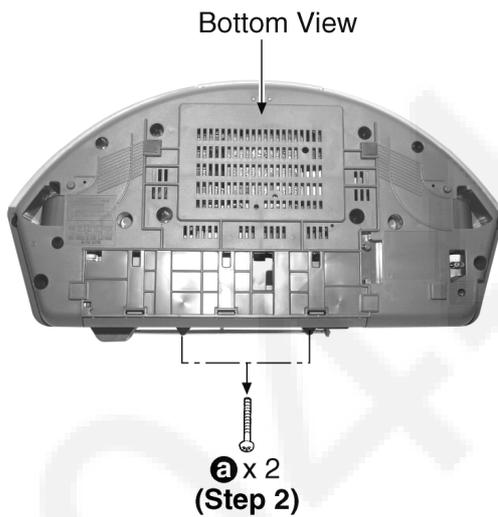

12.3.1. Disassembly of Top Cabinet Unit.

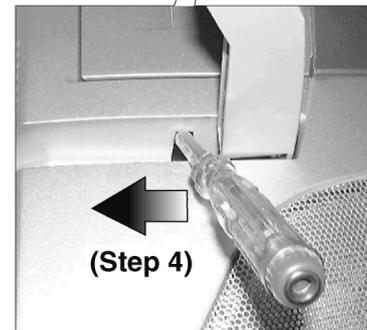

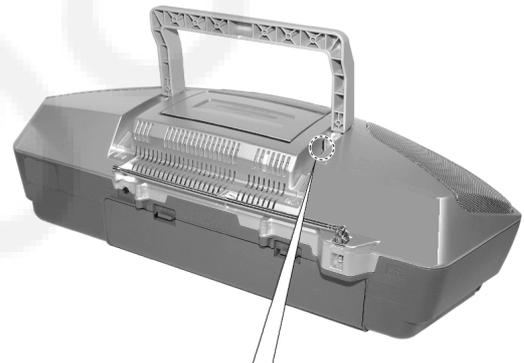

Step 1: Remove 10 screws.

Step 3: Flip up the handle as arrow direction shown.

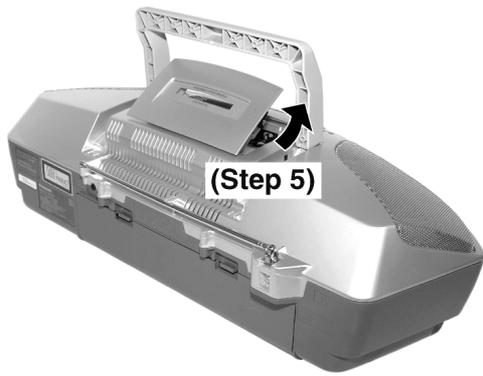

Step 2: Remove 2 screws.

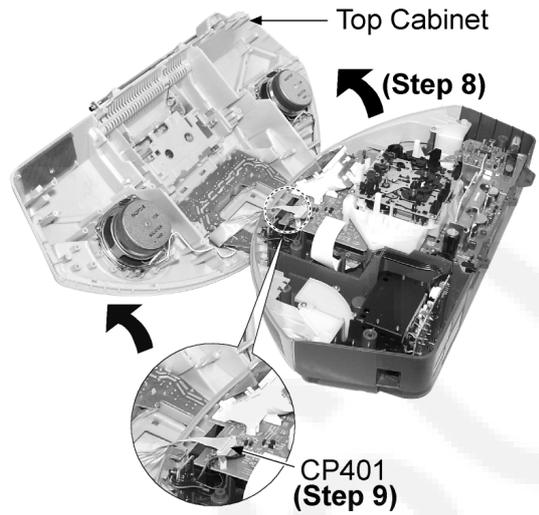

Step 4: Use a screw driver and insert into the hole. Slide the screw driver to the direction shown to open the cassette panel.

Note: Be careful not to exert strong force as it may cause damage to the chassis.

Step 5: Cassette panel will automatically open.

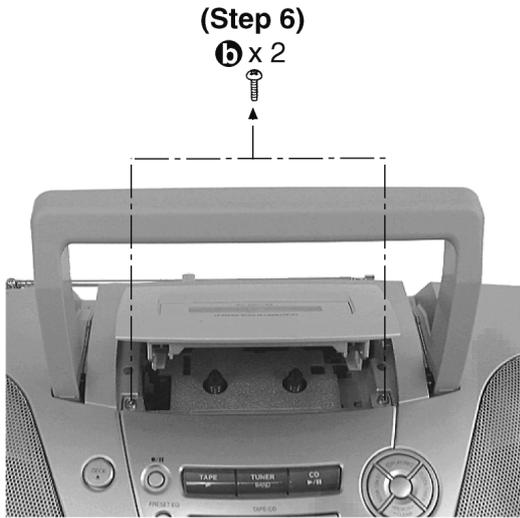

Step 8: Flip the top cabinet over as arrow shown.

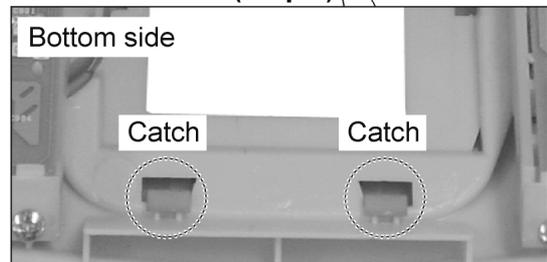

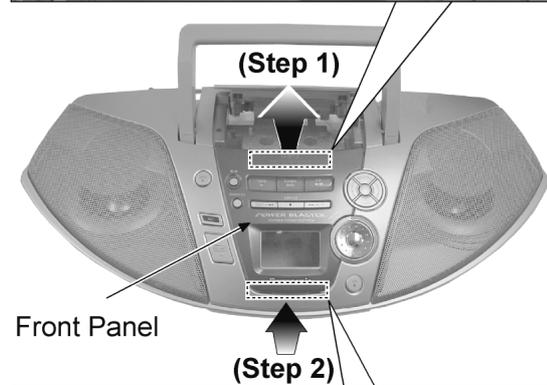

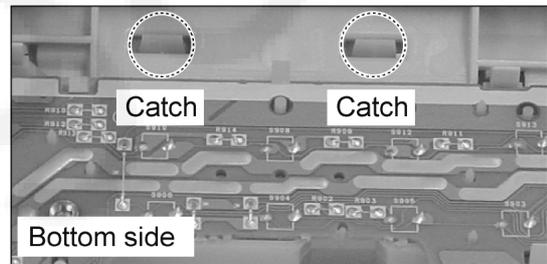

Step 9: Detach the FFC wire (CP401).

12.3.2. Disassembly of Panel P.C.B.

Follow (step 1) to (step 9) of item 12.3.1.

Step 6: Remove 2 screws.

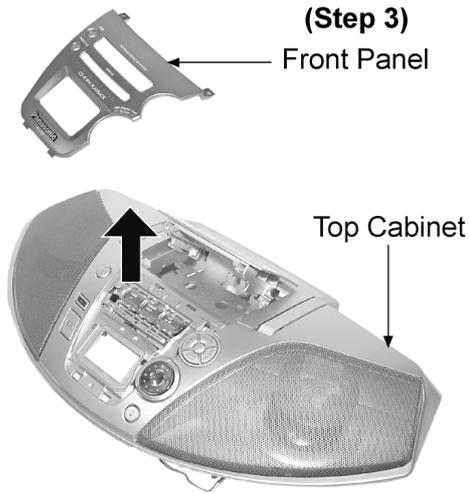

Step 1: Lift the upper section of the front panel slightly towards you as arrow shown.

Step 2: While lifting, push the lower section of the front panel in the direction shown by the arrow to release the catches.

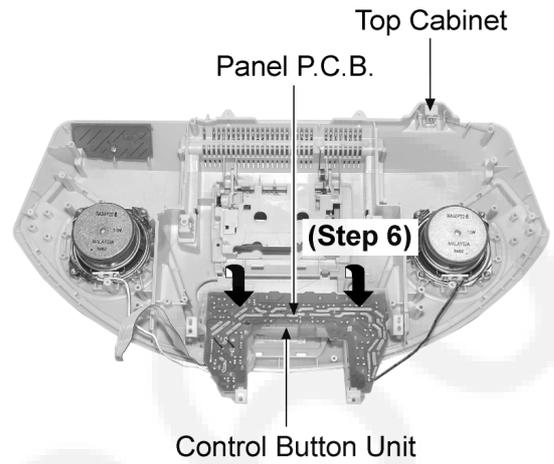

Step 7: Lift up the top cabinet as arrow shown.

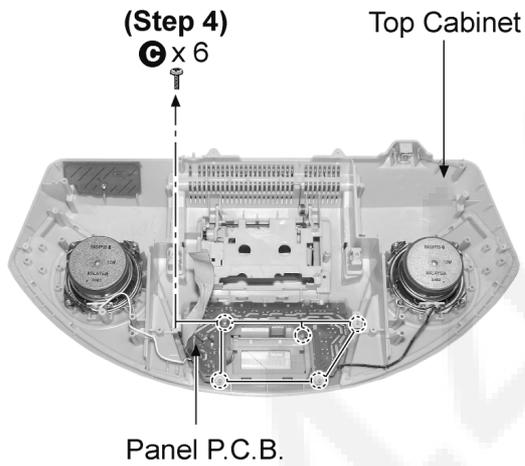

Step 5: Release 2 catches.

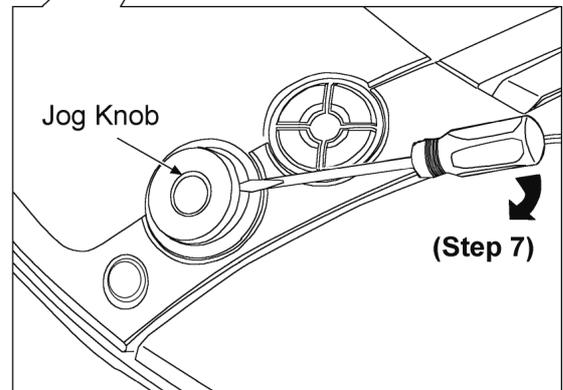

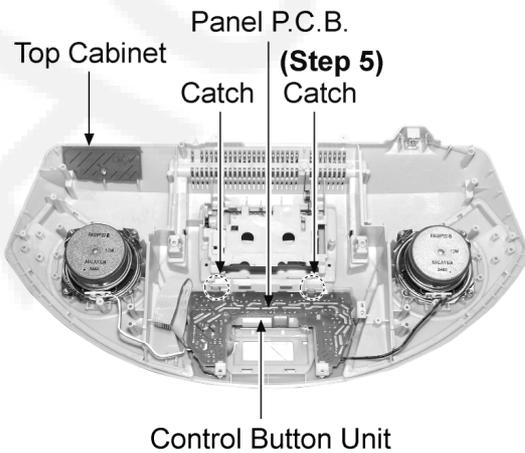

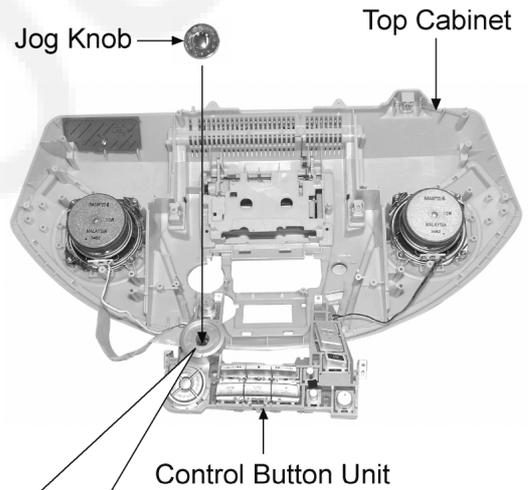

Step 3: Remove the front panel from top cabinet as arrow shown.

Step 6: Flip over the control button unit with the Panel P.C.B. as arrow shown.

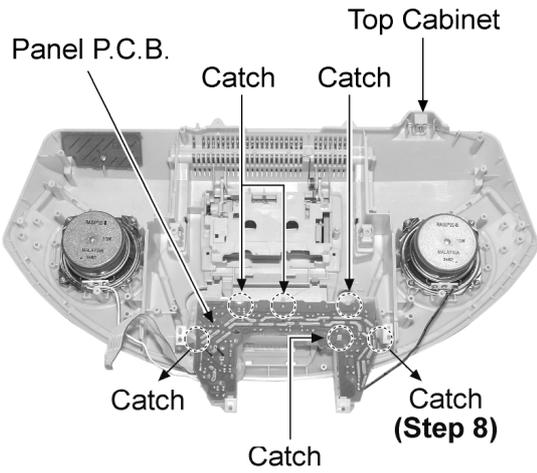

Step 4: Remove 6 screws.

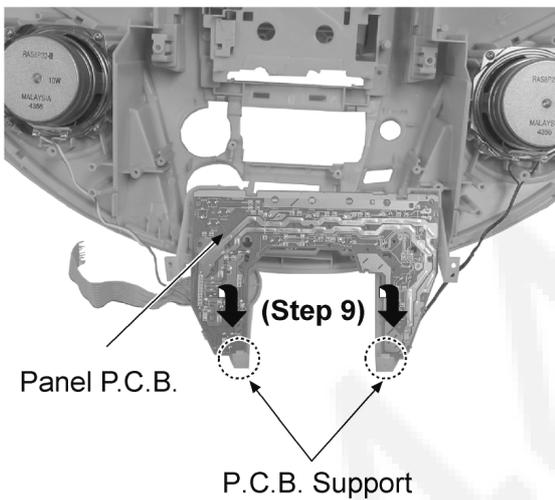

Step 7: Remove the Jog Knob using a screwdriver as arrow shown.

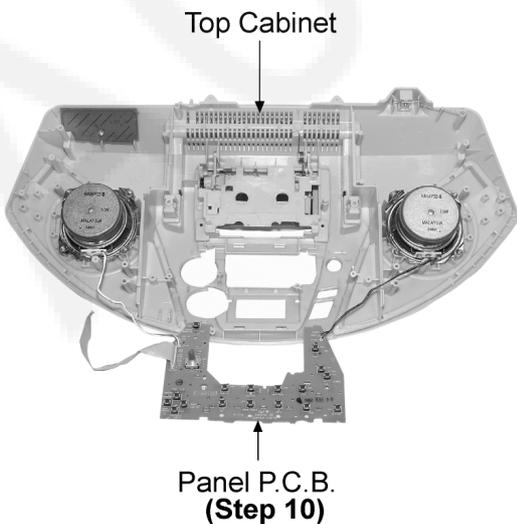

Caution: Do not exert strong force as it may cause damage to the top cabinet.

Step 8: Release 6 catches.

Step 9: Remove the Panel P.C.B. as arrow shown.

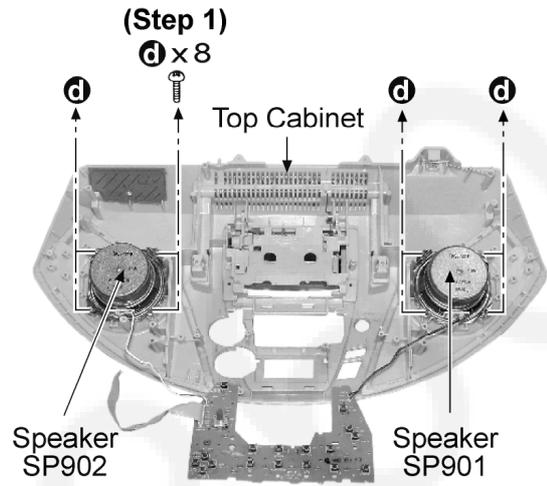

Step 10: Flip the Panel P.C.B. over.

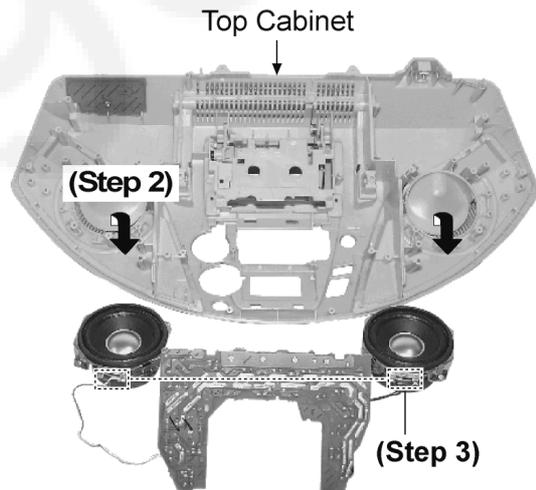

12.3.3. Disassembly of Speakers.

Follow (step 1) to (step 9) of item 12.3.1.

Follow (step 1) to (step 10) of item 12.3.2.

Step 1: Remove 8 screws.

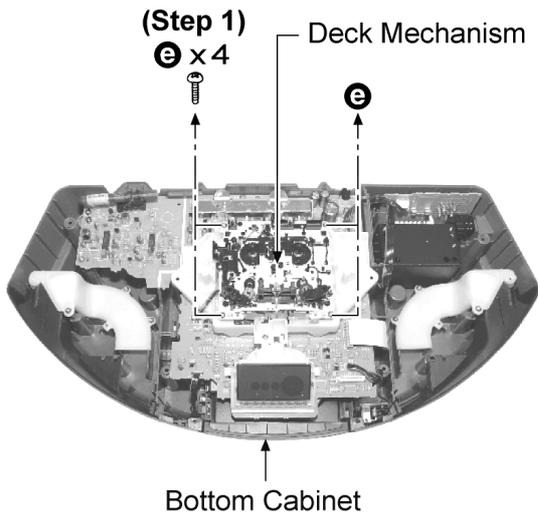

Step 2: Flip the both side speakers as arrow shown.

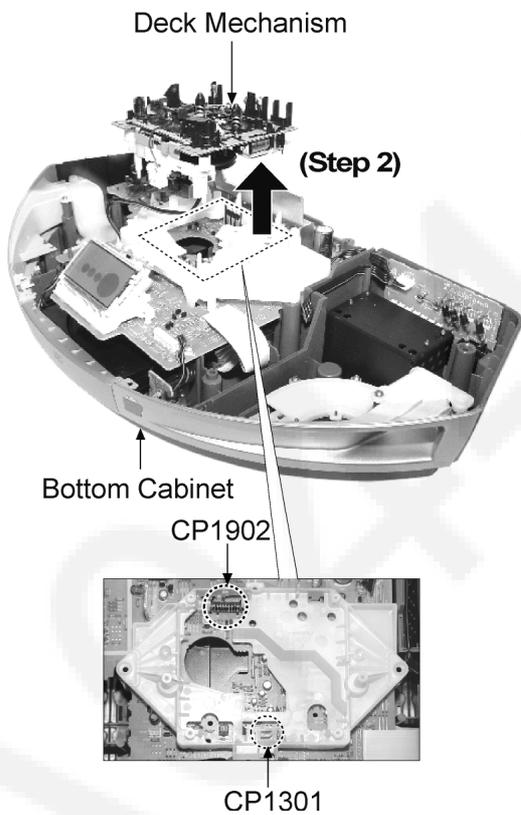

Step 3: Desolder the wire at speaker terminal to remove speaker.

12.3.4. Disassembly of Deck Mechanism.

Follow (step 1) to (step 9) of item 12.3.1.

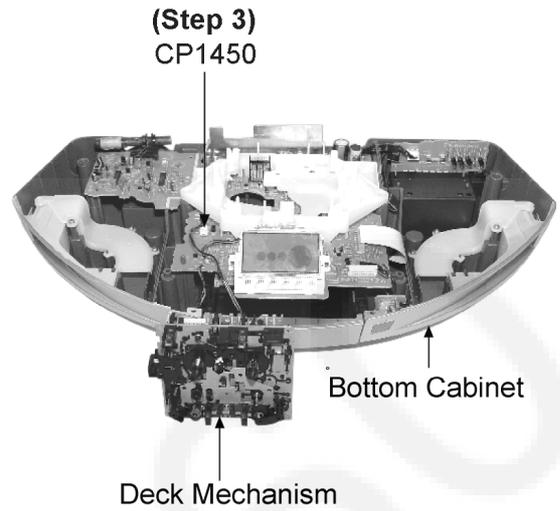

Step 1: Remove 4 screws.

Note: Be careful of connectors (CP1301 & CP1902) while removing the deck mechanism.

Step 2: Remove the deck mechanism as arrow shown.

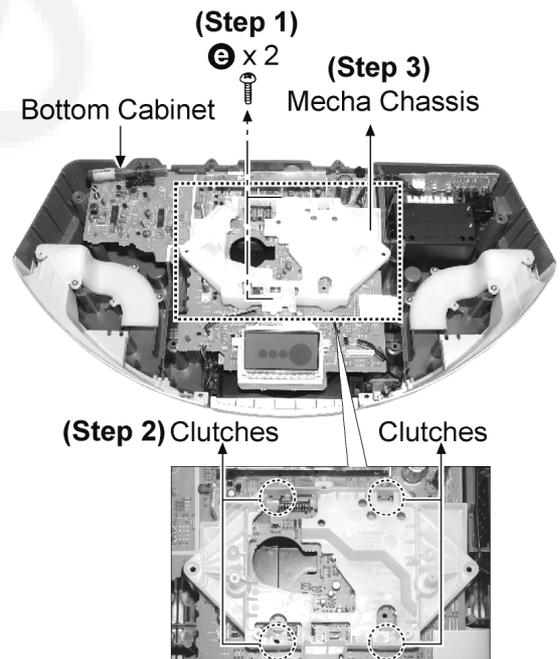

Step 3: Release the connector (CP1450) to remove the deck mechanism.

12.3.5. Disassembly of Main, Standby LED, Power On and Sensor P.C.B.

Follow (step 1) to (step 9) of item 12.3.1.

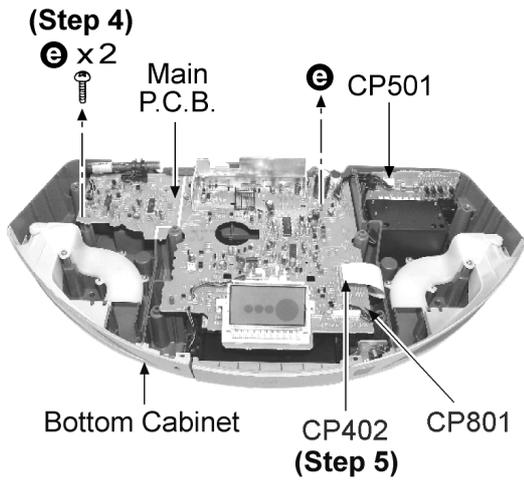

Follow (step 1) to (step 3) of item 12.3.4.

Step 1: Remove 2 screws.

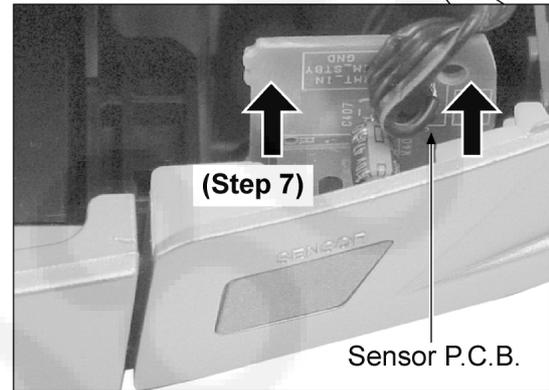

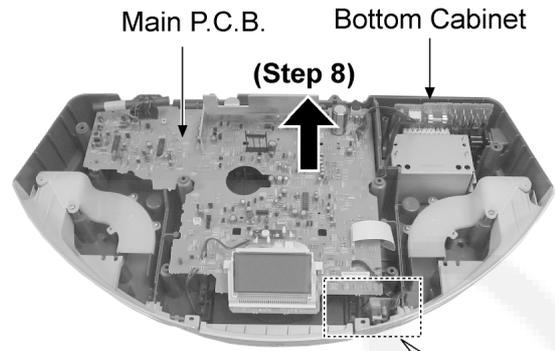

Step 2: Release 4 clutches.

Step 3: Remove the Mecha Chassis.

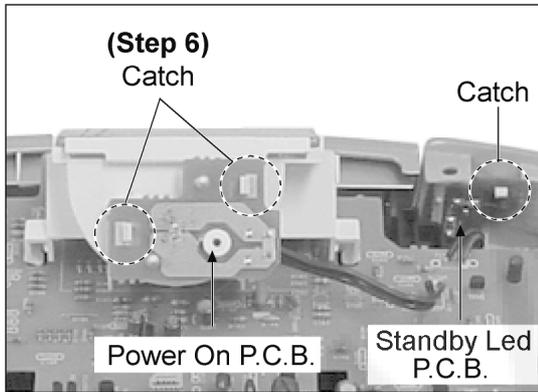

Step 4: Remove 2 screws.

Step 5: Release all the connectors (CP501, CP402 & CP801).

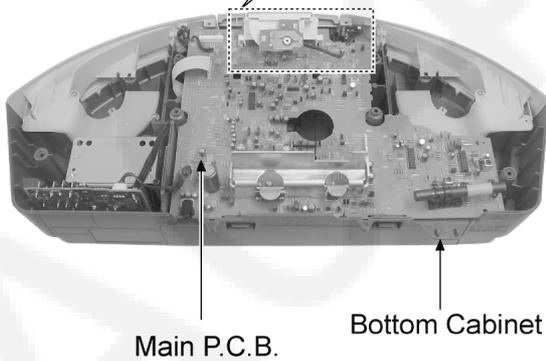

Step 7: Release the Sensor P.C.B. as arrow shown.

Step 8: Remove the Main P.C.B. as arrow shown.

Step 6: Release 3 Catches and remove Power On P.C.B. and standby Led P.C.B..

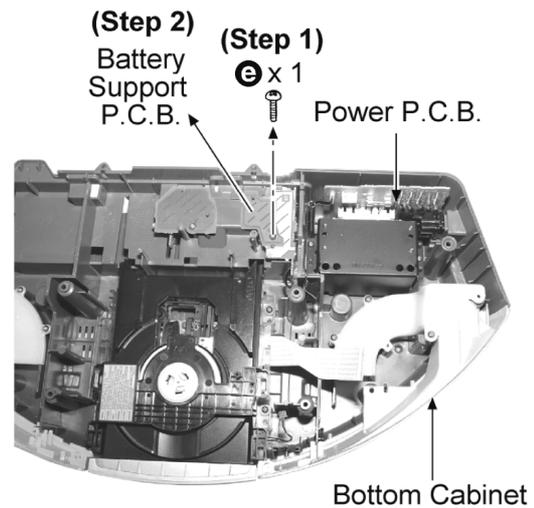

12.3.6. Disassembly of Battery and Power P.C.B.

Follow (step 1) to (step 9) of item 12.3.1.

Follow (step 1) to (step 3) of item 12.3.4.

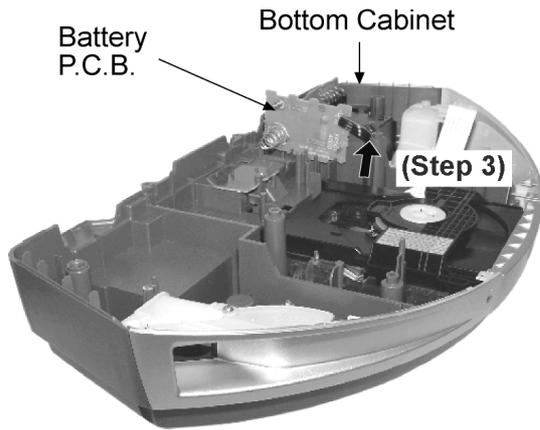

Follow (step 1) to (step 8) of item 12.3.5.

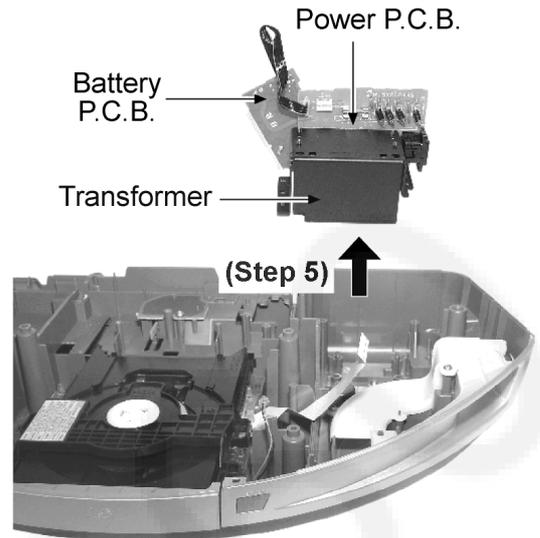

Step 1: Remove 1 screw.

Step 2: Remove the Battery Support P.C.B..

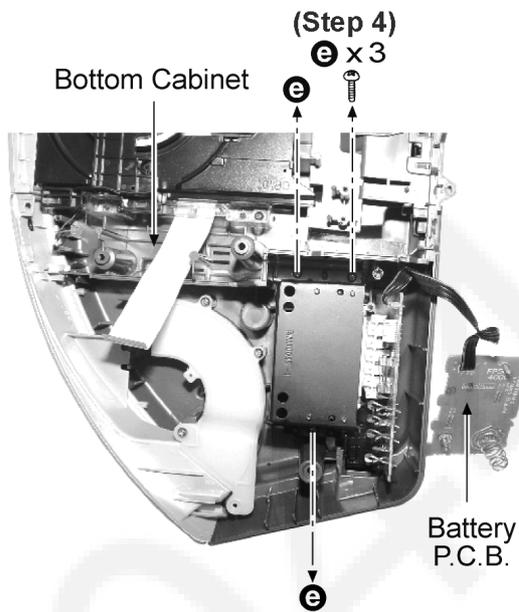

Note: Remember to place the Battery Support P.C.B. to original location.

Step 3: Remove the Battery P.C.B. as arrow shown.

Step 5: Remove the transformer together with battery P.C.B. and Power P.C.B. as arrow shown.

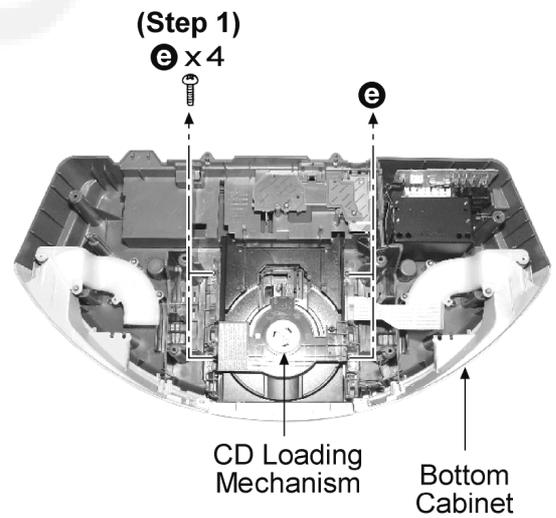

Step 4: Remove 3 screws.

12.3.7. Disassembly of CD Loading Mechanism.

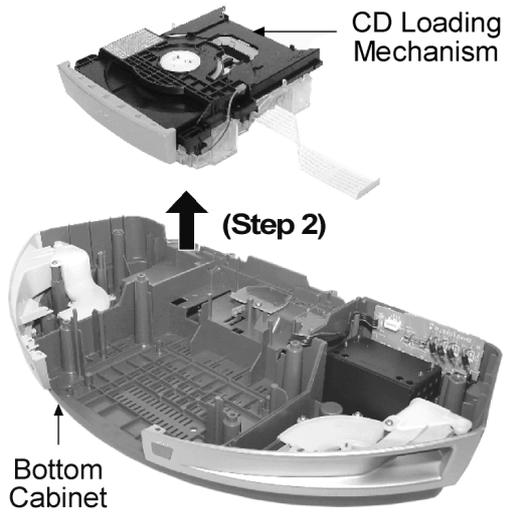

Follow (step 1) to (step 9) of item 12.3.1.

Follow (step 1) to (step 3) of item 12.3.4.

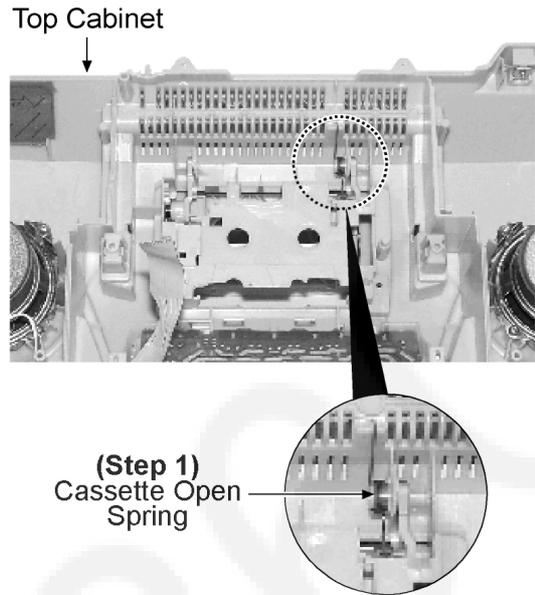

Follow (step 1) to (step 8) of item 12.3.5.

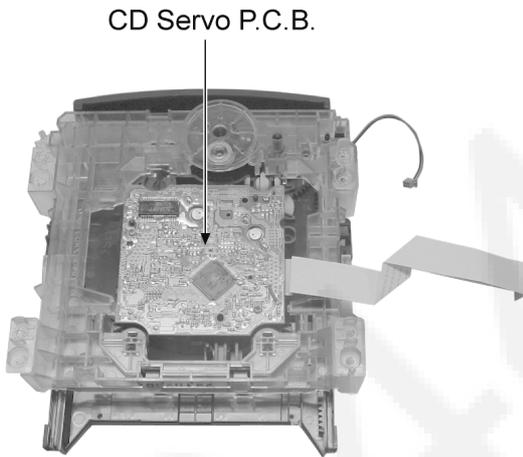

Step 1: Remove 4 screws.

Step 2: Remove the CD Loading Mechanism as arrow shown.

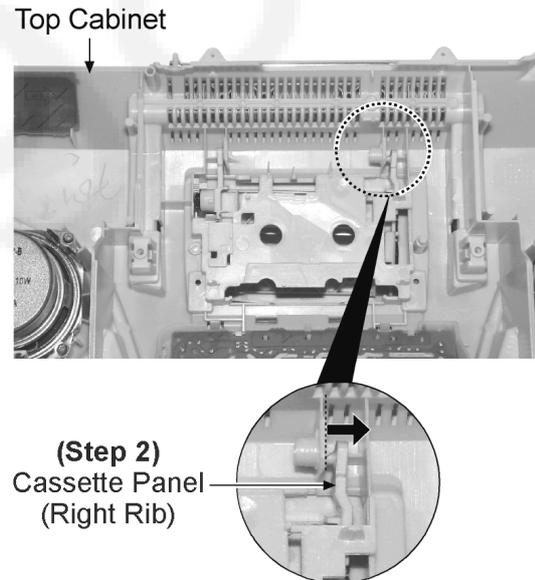

Step 1: Remove the cassette open spring.

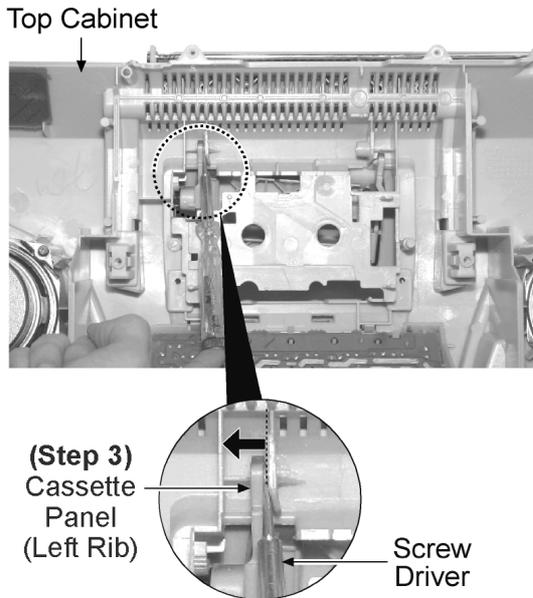

12.3.8. Replacement of Cassette Panel.

Follow (step 1) to (step 9) of item 12.3.1.

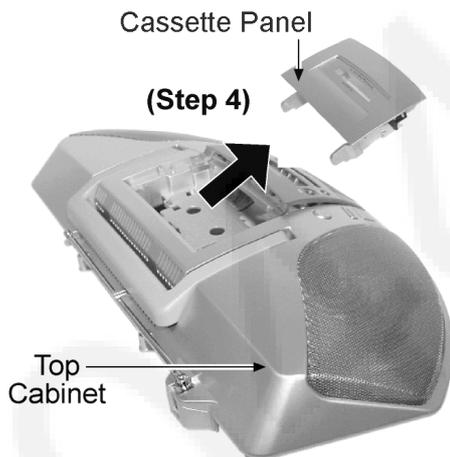

Step 2: Push the cassette panel slowly to the right.

Step 3: Push the cassette panel slowly to the left using a screw driver.

Caution: Be careful of using/exerting strong forces.

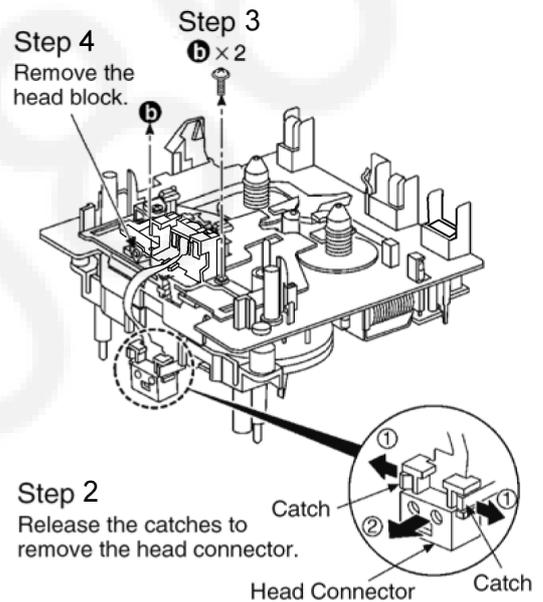

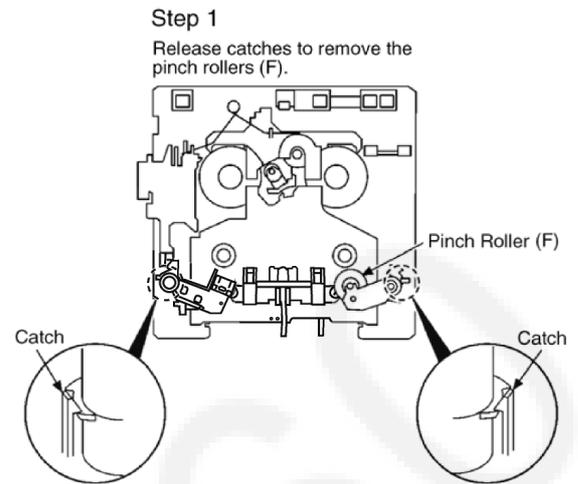

Step 4: Remove the cassette panel from top cabinet as arrow shown.

12.4. Procedures for Replacing Pinch Roller and Head Block (Deck Mechanism Unit)

Follow (step 1) to (step 9) of item 12.3.1.

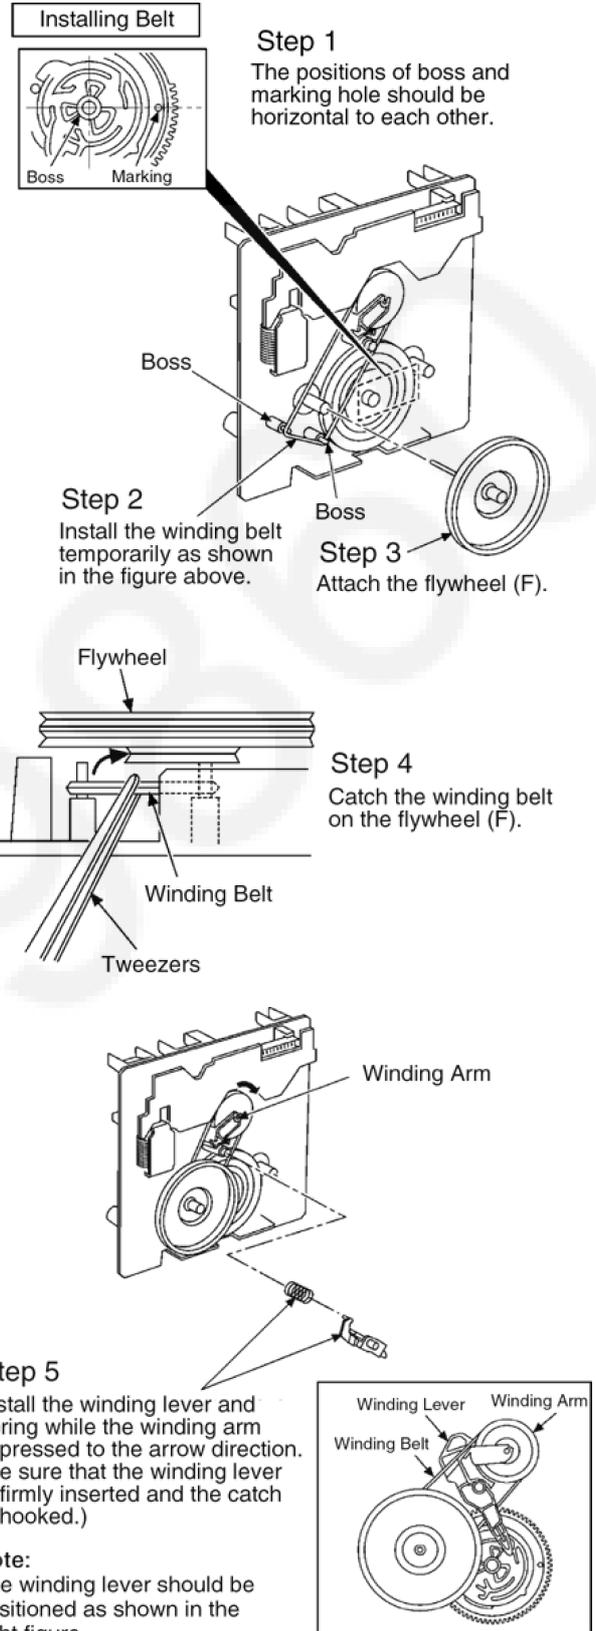

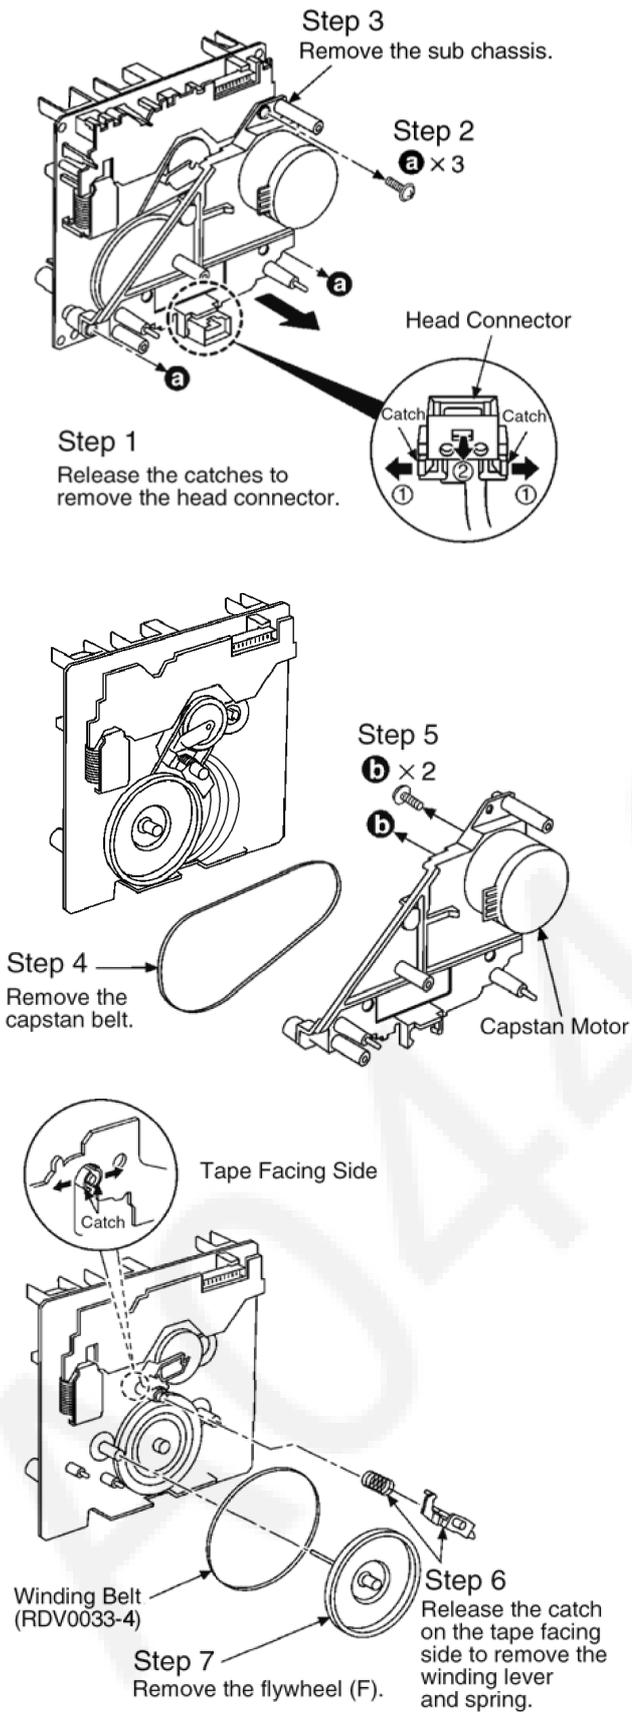

Follow (step 1) to (step 3) of item 12.3.4.

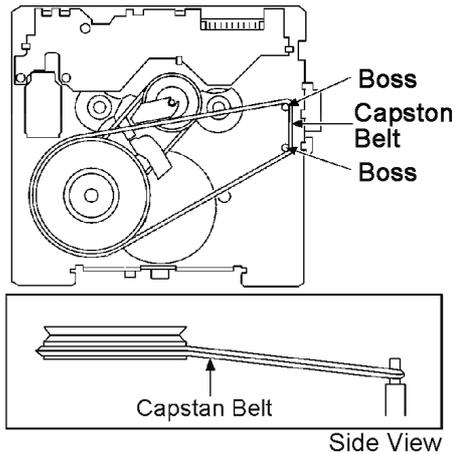

12.5. Procedures for Replacing Motor, Capstan Belt A, Capstan Belt B, and Winding Belt (Deck Mechanism Unit)

Follow (step 1) to (step 9) of item 12.3.1.

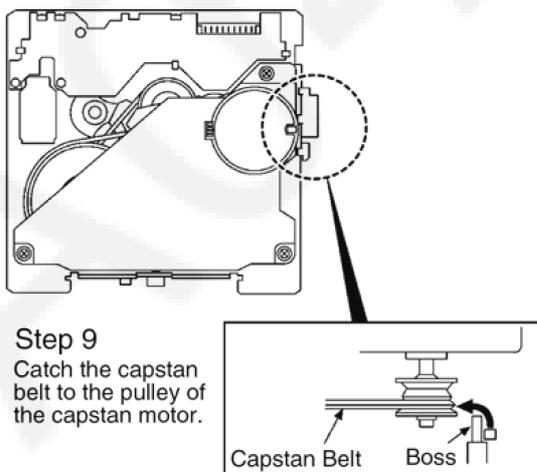

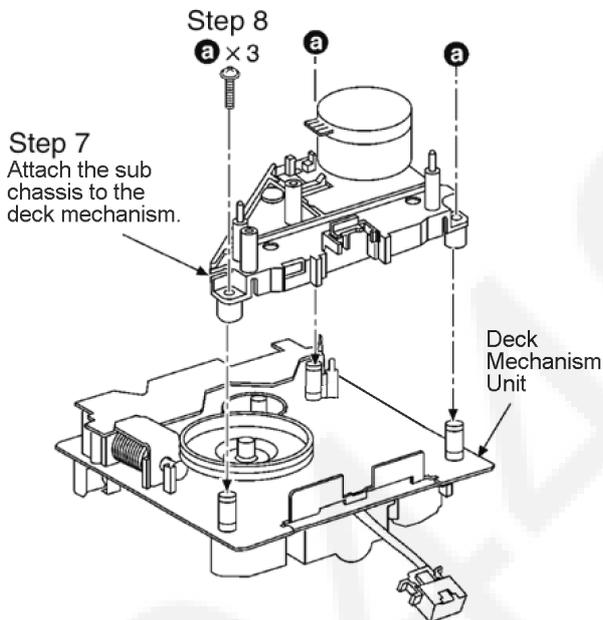

Follow (step 1) to (step 3) of item 12.3.4.

Step 6
Install the capstan belt temporarily as shown in the figure below.

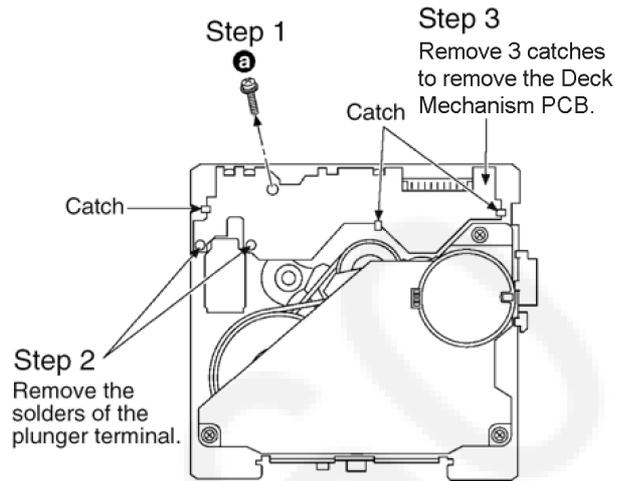

Note:
Keep the belt away from grease.

12.6. Procedures for Replacing Parts on Deck Mechanism PCB

Follow (step 1) to (step 9) of item 12.3.1.

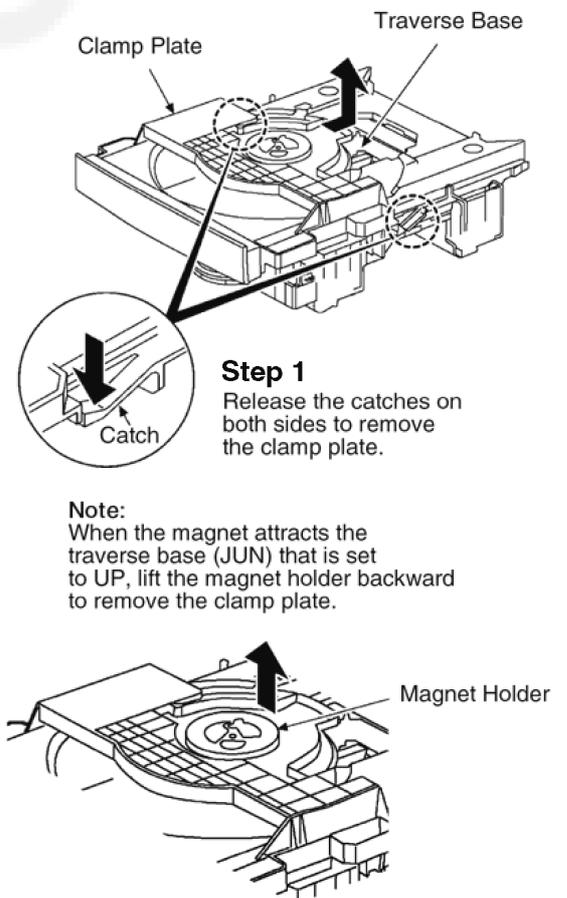

Follow (step 1) to (step 3) of item 12.3.4.

12.7. Procedures of Replacing Traverse Base (Unit), Driving Gear, and Cam Gear (CD Mechanism Unit)

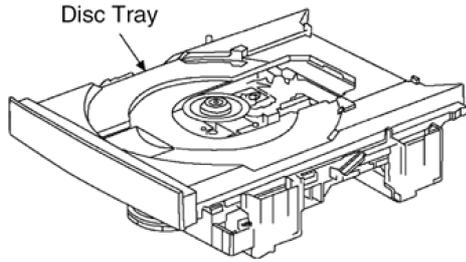

12.7.1. Disassembly of the Disc Tray.

Follow (step 1) to (step 9) of item 12.3.1.
Follow (step 1) to (step 3) of item 12.3.4.
Follow (step 1) to (step 8) of item 12.3.5.
Follow (step 1) to (step 2) of item 12.3.7.

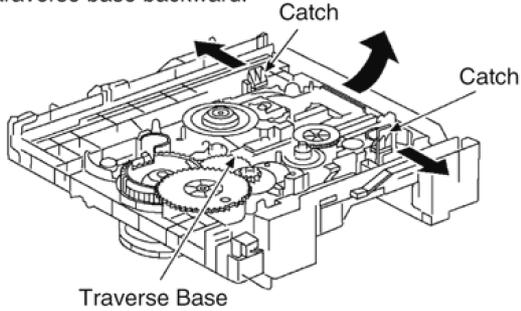

Step 2

Remove the disc tray upward.

Step 3

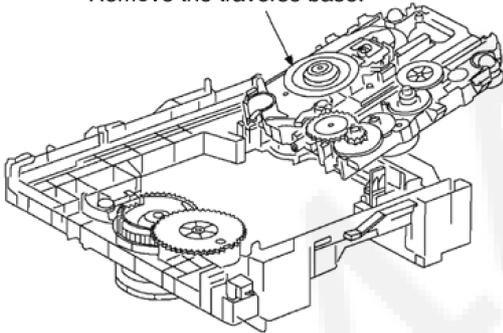

Release 2 catches to pull up the traverse base backward.

Traverse Base

Step 4

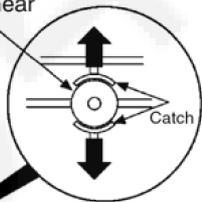

Remove the traverse base.

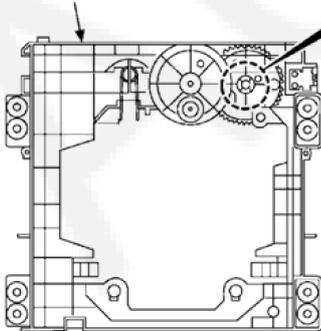

Driving Gear

Step 5

Release the catch to push out the driving gear.

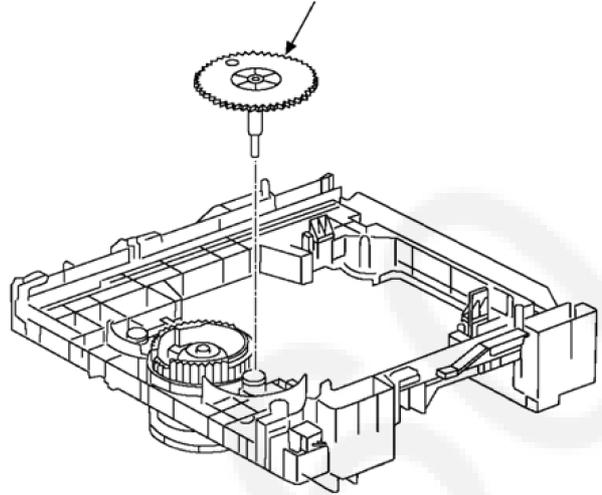

Mechanical Chassis

(Bottom View)

Step 6

Pull out the driving gear.

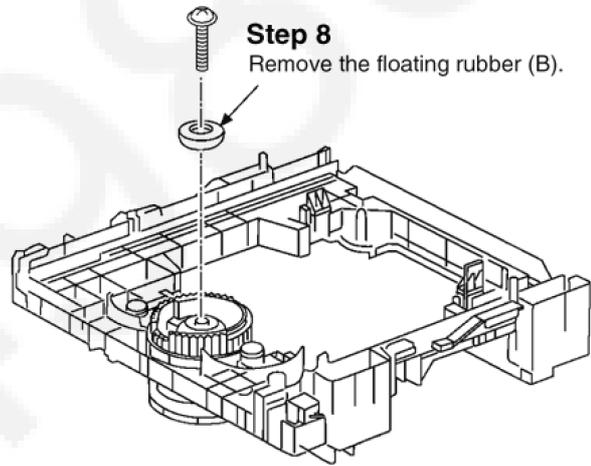

Step 7

(B)

Step 8

Remove the floating rubber (B).

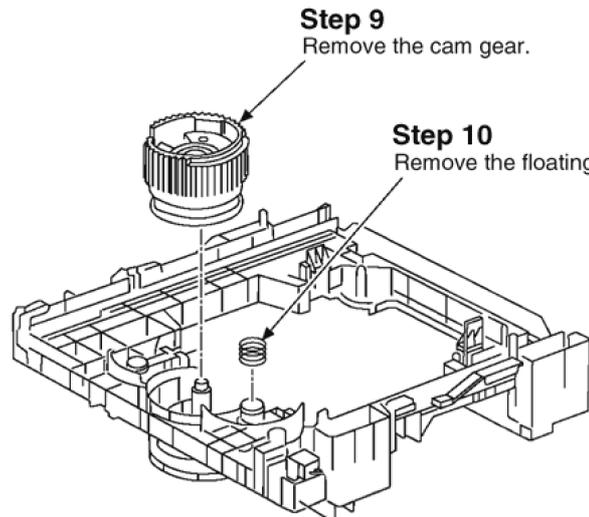

Step 9

Remove the cam gear.

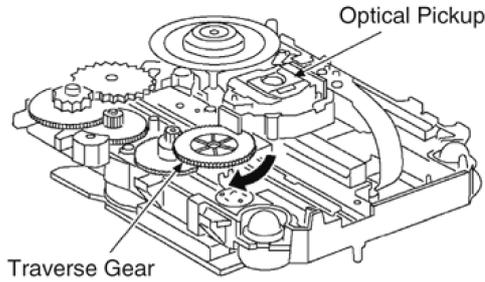

Step 10

Remove the floating spring.

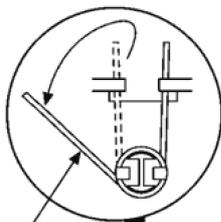

Assembly of Traverse Base, Cam Gear, Driving Gear, Disc Tray, and Clam Plate

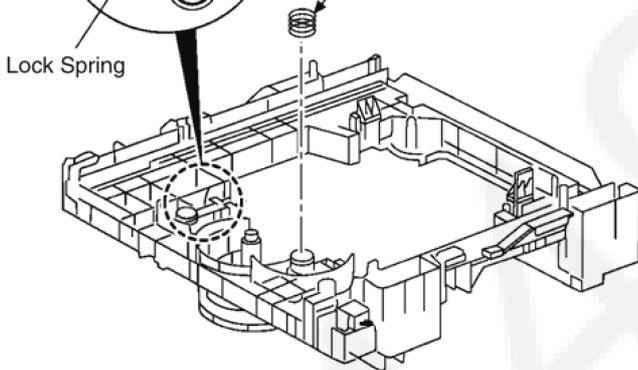

Step 1
Turn the traverse gear (B) to the arrow direction, and move the optical pickup to the center.

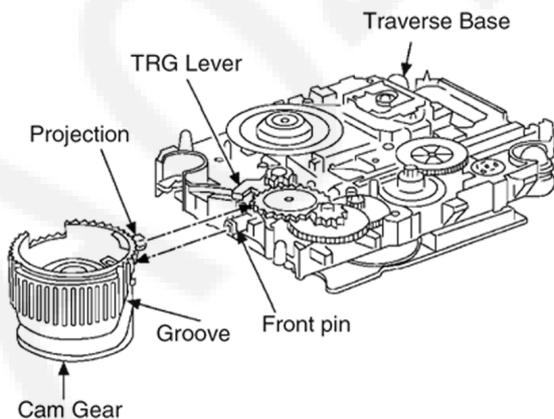

Step 2
Release one side of the lock spring.

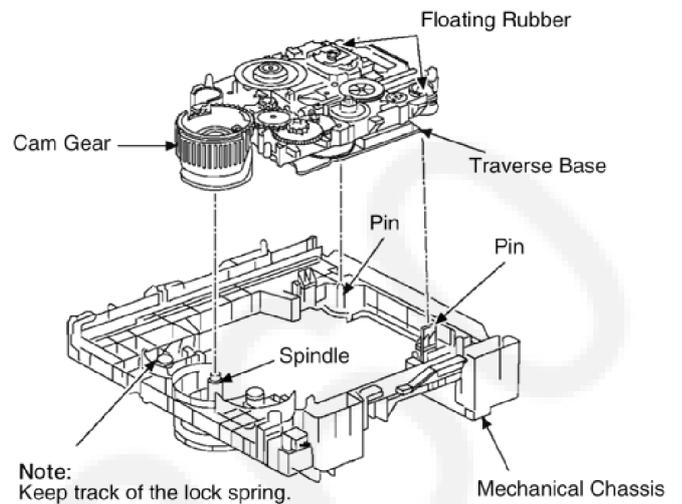

Step 3
Attach the floating spring.

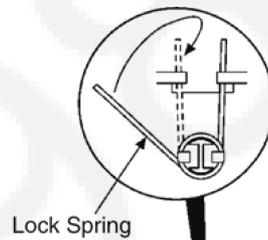

Step 4
Engage the front pin of the traverse gear to the groove of the cam gear and the projection of the cam gear between the TRG lever. (so that the gear is automatically engaged)

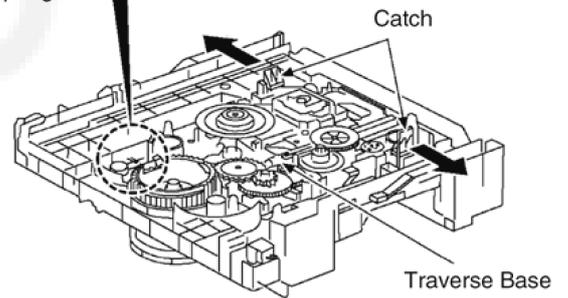

Step 5
Hold the assembled part carefully. Engage the cam gear to the spindle of the mechanical chassis and the floating rubber of the traverse base to the pin of the mechanical chassis.

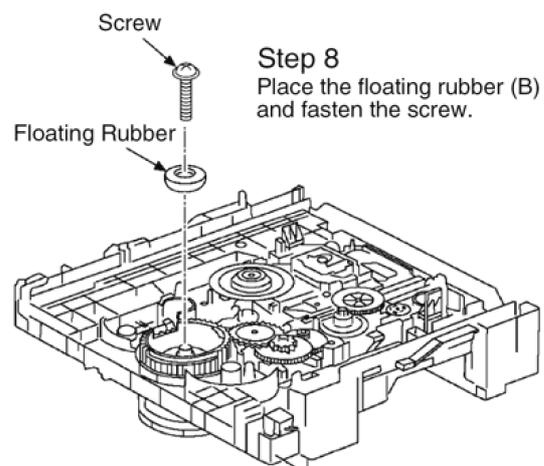

Step 6
Catch the released lock spring back to the traverse base.

Step 7
Release the catches to push the traverse base in.

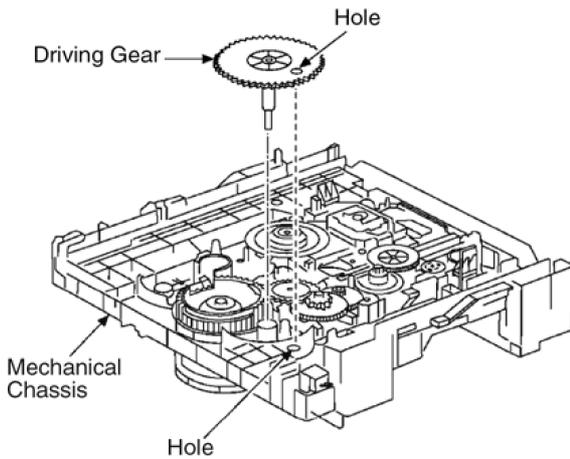

Step 8
Place the floating rubber (B) and fasten the screw.

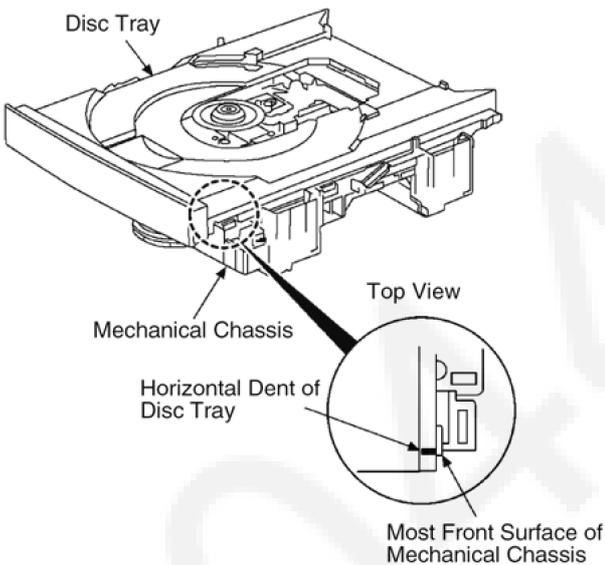

Step 9

Put together the holes located on the driving gear and the mechanical chassis, and push down the driving gear till a click sound is heard.

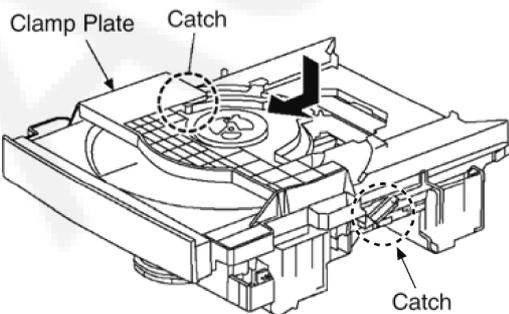

Step 10

Position the disc tray where the horizontal dent located in the most right exterior of the disc tray is attached to the front surface located in the right most exterior of the mechanical chassis.

Step 11

Insert the clamp plate from the top to attach over the catch.

12.8. Procedures for Replacing Optical Pickup (CD Mechanism Unit)

Follow (step 1) to (step 9) of item 12.3.1.

Follow (step 1) to (step 3) of item 12.3.4.

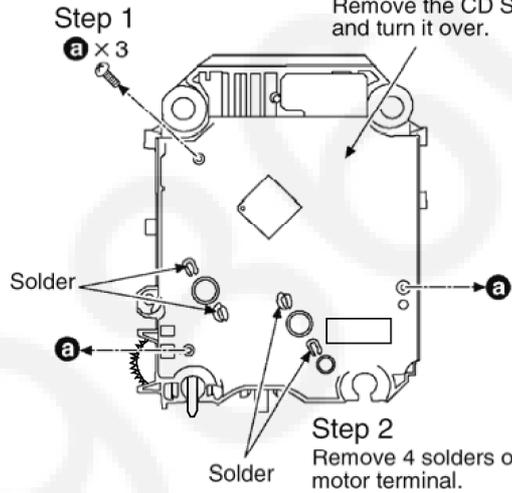

Follow (step 1) to (step 8) of item 12.3.5.

Follow (step 1) to (step 2) of item 12.3.7.

Follow (step 1) to (step 4) of item 12.6.1.

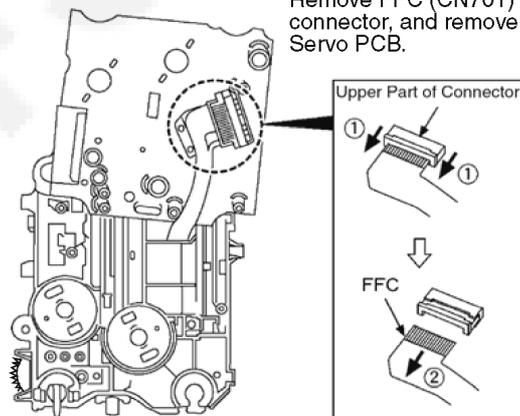

Step 3

Remove the CD Servo PCB and turn it over.

Step 4

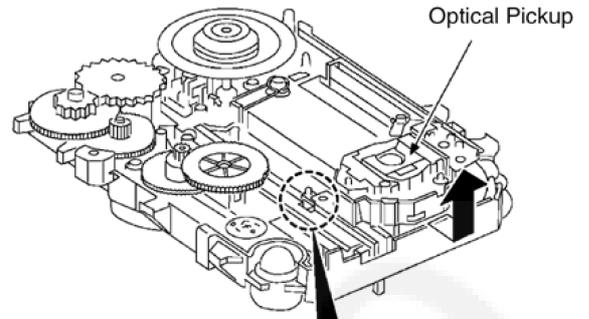

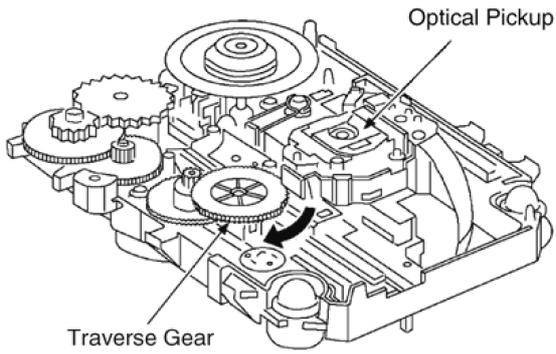

Remove FFC (CN701) From the connector, and remove the CD Servo PCB.

Note:
Insert the short pin to FFC of the optical pickup.
(Refer to "Note on Handling Optical Pickup".)

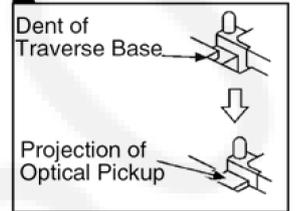

Step 5

Turn the traverse gear (B) to the arrow direction, and move the optical pickup to the most outer side.

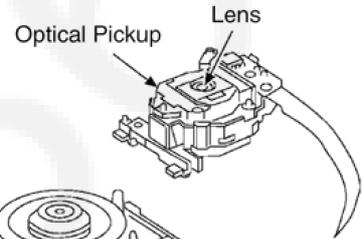

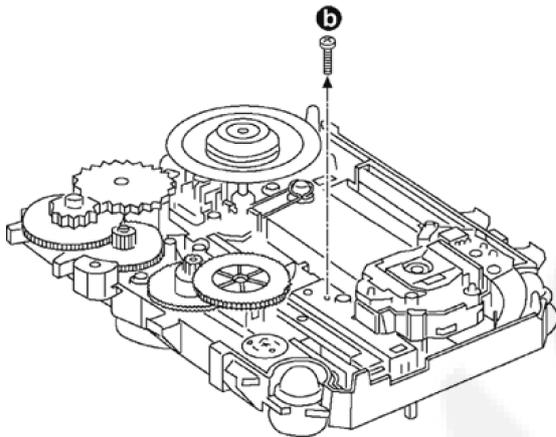

Step 8

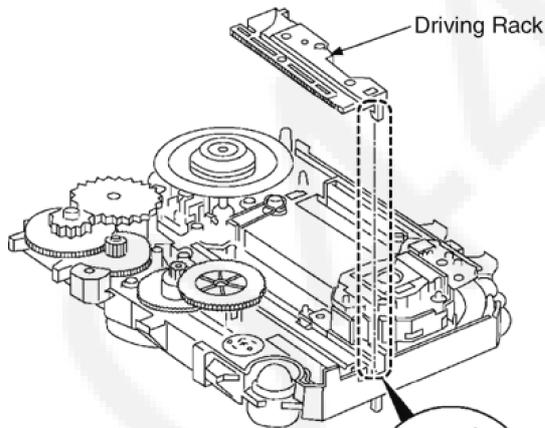

Engage the projection of the optical pickup to the dent of the traverse base in order to remove the optical pickup.

Step 6

Note:
Do not touch the optical pickup lens.

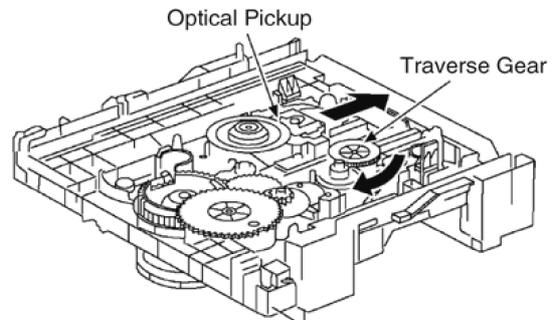

Step 7

Release the catch of the driving rack to remove the rack.

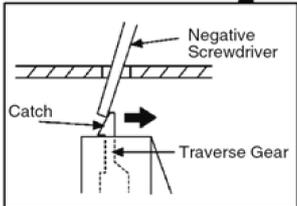

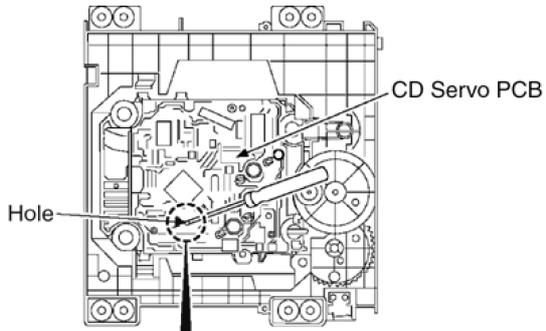

12.9. Procedures for Replacement Traverse Gear A and Traverse Gear B (CD Mechanism Unit)

- Follow (step 1) to (step 9) of item 12.3.1.
- Follow (step 1) to (step 3) of item 12.3.4.
- Follow (step 1) to (step 8) of item 12.3.5.
- Follow (step 1) to (step 2) of item 12.3.7.
- Follow (step 1) to (step 2) of item 12.6.1.

Step 1

Turn the traverse gear to the arrow direction, and move the optical pickup to the most outer side.

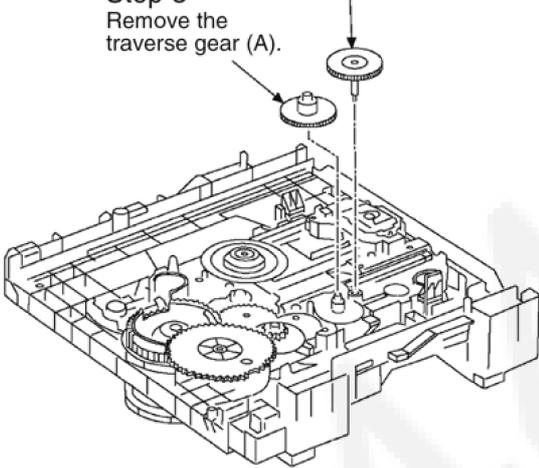

Step 2

Insert the thin negative screwdriver into the hole of the CD Servo P.C.B., and push the catch to release the traverse gear (B).

Step 3
Remove the traverse gear (A).

Step 4
Remove the traverse gear (B).

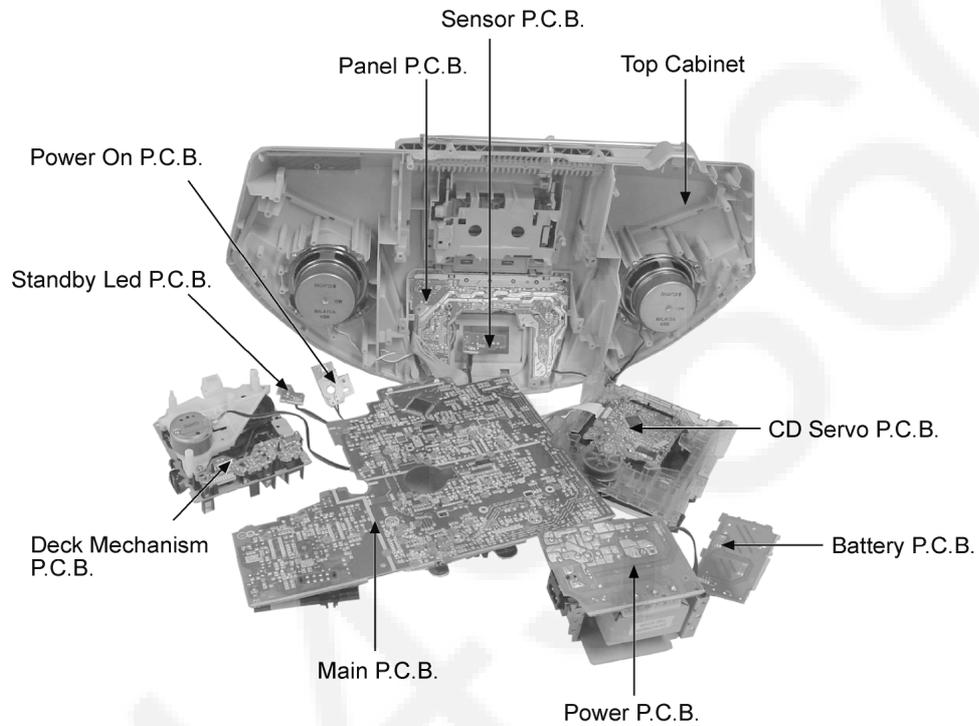

Note:
Do not use the once removed traverse gear (B), and be sure to replace with a new gear.

13 Procedure for checking of the major P.C.B.

13.1. Checking the Main P.C.B., Panel P.C.B., Deck Mechanism P.C.B., CD Servo P.C.B., Battery P.C.B., Sensor P.C.B., Power-On P.C.B., Power and Standby LED P.C.B.

Preparation

Follow items 12.3.1. to 12.3.7. of Disassembly Procedure.

14 Self Diagnostic Function

14.1. Self-diagnosis Function

14.1.1. Entering into self-diagnosis mode

1. Ensure there is no cassette tape in the deck unit.
2. Switch to CD function.
3. Press and hold the [CD/TAPE STOP_n] key of the main set for more than 2 seconds. While pressing this key, press the FF key on the main set for another 2 seconds to enter into the Self-Diagnosis mode.

Note:

Even if [CD/TAPE STOP_n] key of the main set is pressed while the self diagnosis mode is on, function will not be switched. Instead, confirmation of error numbers will begin.

14.1.2. Display Location

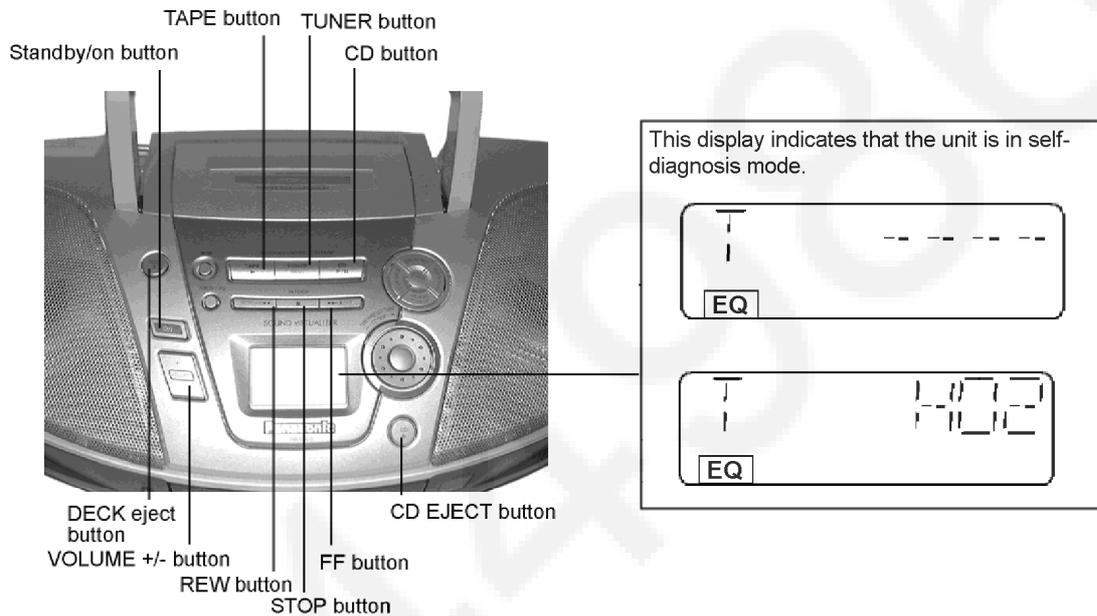

Figure 14-1

14.1.3. Error Code Display

- At the self-diagnosis mode, error codes will be displayed when [TAPE/CD STOP_n] key at the main unit is pressed.

Note:

Error numbers display is due to error symptom encountered during normal operation of unit. These error codes will be “remembered” and stored.

- Example: [T.....H01] (the display shall be retained)
- To exit from the self-diagnosis mode, execute power OFF operation.
- Even at power OFF operation, this error numbers shall not be cleared (the number can be cleared only at the start up of micro-p after reset).
- If repeating self-diagnosis, add the newly detected errors only without deleting errors which have been detected before.

14.1.4. Error Code Table

Error code	Possible symptom	Description of problem
U01	Batteryflat	<ul style="list-style-type: none"> • During operation, when PDET switches to OFF (PDET - 1.534V) due to fall of power supply voltage fall, the power supply will be automatically switched OFF. • If REM_STBY = L, VCCDET = L the system shall be judged to have low battery and [.....U01] shall be displayed for 10 seconds. • To check REM_STBY and VCCDET, chattering check will be read-in twice 1 sec after PCONT is set to L. • In case of power ON operation, after PCONT is set to 'H', power supply shall be checked using PDET input. If the battery is flat (PDET - 1.534V), power supply OFF process will be executed and error number [.....U01] will be displayed for 5 seconds. This error number will not be memorized.

Error code	Possible symptom	Description of problem
U02	Power supply cut	<ul style="list-style-type: none"> • During operation, when PDET switches to OFF (PDET - 1.534V) due to fall of power supply voltage fall, the power supply will be automatically switched OFF. • If REM_STBY = L, VCCDET = H the system shall be judged to have low battery and [.....U02] shall be displayed for 10 seconds. • To check REM_STBY and VCCDET, chattering check will be read-in twice 1 sec after PCONT is set to L. • Power supply state shall be checked using REM_STBY and VCCDET inputs. If power ON is executed from power OFF (REM_STBY = L and VCCDET = H), error number [.....U02] will be displayed for 5 seconds. This error number will not be memorized.
F15	CD REST_SW abnormal	<ul style="list-style-type: none"> • At initial setting of CD traverse position, if REST_SW ON is not detected even though the fail safe timer time is over (10 sec), this is memorized as an error and the error number can be cleared only at the start up of micro-p after reset.
H15	CD OPEN_SW abnormal	<ul style="list-style-type: none"> • During normal operation, if CD OPEN_SW ON is not detected within 4 sec, then H15 will be memorized in memory. The error code can be cleared only at the start up of micro-p after reset.
H01	DECK operation abnormal (reel motor, solenoid, and MODE_SW) (provisional)	<ul style="list-style-type: none"> • During normal operation, if mechanism error process is executed once by mode switch against the same deck operation, it is judged as mechanism abnormality and this is memorized as an error. • Conditions for judging mechanism error: <ul style="list-style-type: none"> – Mode switch ON is not detected 800 ms after plunger activation for PLAY / REC process. – Mode switch ON is not detected 800 ms after plunger activation for FF / REW process / Mode switch OFF is not detected 800 ms after plunger activation after detecting Mode SW ON / Mode Switch ON is not detected 800 ms after detecting Mode switch OFF. – If Mode switch comes ON at STOP / PAUSE state (normal condition), this is judged as an Error: <ol style="list-style-type: none"> 1. Main purpose for this Self Diagnosis is to diagnose a partial short of the deck. 2. Mechanical error process caused by EJECT operation will not be counted. 3. This error number can be cleared only at the start up of micro-p after reset.
F26	Communication between CD servo LSI and microp abnormal	<ul style="list-style-type: none"> • At the time of switching to CD function, SENSE = H will be detected using DTMS system setting command. If the error is memorized when SENSE = L is not detected within fail safe timer time (20 sec), [F26] will be displayed simultaneously. This display will be retained if the power is ON and at CD function. If this error occurs, CD operation afterward cannot be executed as in the case of [NO.DISC.]. This error number can be cleared only at the start up of micro-p after reset.

14.1.5. Self-diagnosis mode Deck Mechanism

- Activate the Self Diagnosis mode for the Deck and the following Self Diagnosis will be conducted.

Error Code	Description
H01:	If MODE_SW abnormal is detected during normal operation, it will be memorized. The detection and memory shall be done for Deck.
H02:	RECINH_SW abnormal.
H03:	HALF_SW abnormal.
F01:	Reel pulse abnormal.

- Operating Procedures

1. Activate the Self Diagnosis mode with the Deck unloaded.
2. The test mode will be displayed ([T] at the 1st digit shows TEST) and detection shall be executed to check RECINH_SW, HALF_SW are in the OFF state (the tape counter display is retained).
3. Load a cassette tape (with recording preventive tab present) into the deck and close the cassette holder.
4. At this instant with the cassette loaded in, RECINH_SW, HALF_SW will be checked and confirmed at this stage by the software. Press FF key to proceed the self-diagnosis. The FF operation will stop automatically after 3 sec. If abnormal operation is detected, the tape will stop automatically after 1 sec. During the FF operation, the Reel Pulse will be checked by the software.
5. After the tape stops, the Error codes will be displayed by toggling the STOP_n key. (For a more detailed explanation, refer to Figure 14-2).

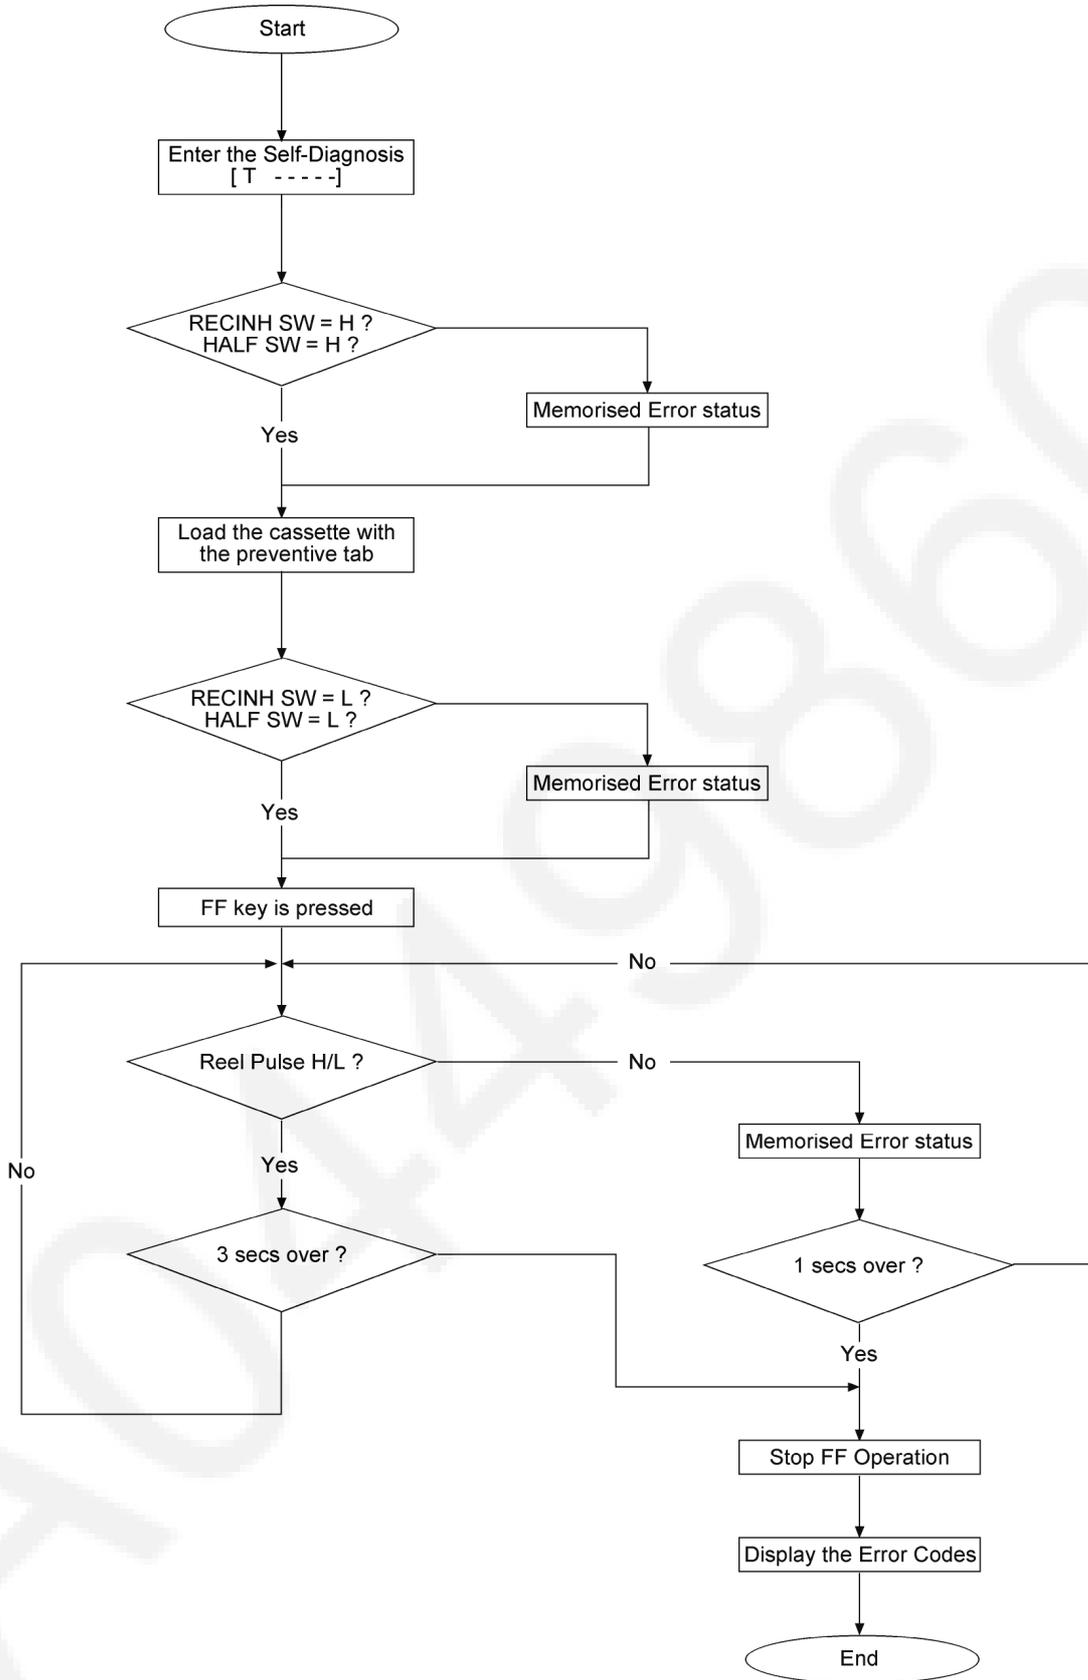

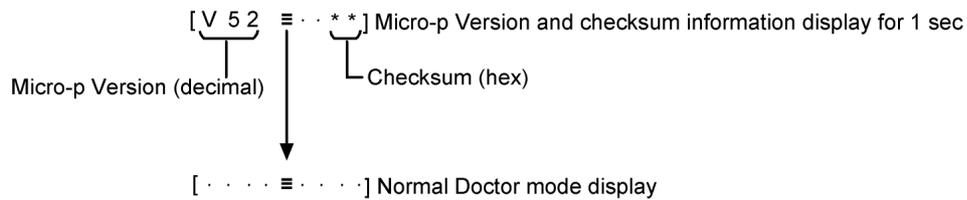

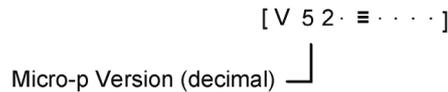

Figure 14-2

14.2. Setting of doctor mode

1. Switch to CD mode. (Ensure no disc is inserted)
2. To enter Doctor mode, press and hold [TAPE/CD STOP_n] key at the main unit, followed by [4] & [7] on remote control.
3. When the Doctor Mode is activated the LCD display will show the ≡ symbol at the 5th digit. At the same time, the micro-p version number (base 10) and EEPROM's checksum (base 16) will be displayed for 1 sec. After displaying the EEPROM information for 1 sec, the display will return to the normal Doctor mode display

4. However, if the EEPROM was not detected, it will not display the EEPROM's checksum information. The LCD will display micro-p version number (as shown below) for 1 sec and return to normal Doctor Mode display.

Note:

Within the Doctor Mode display, at any of the test modes, if [STOP_n] key at main set is pressed, followed by [4] and [7] key from the remote control, the micro-p's version number and EEPROM information will be displayed for 1 sec, and then returned to the normal doctor mode display.

14.2.1. Inspection item list

Test number	Test Item	Operation key (numeric buttons)
1	Tact SW inspection	CD, [1]
2	TONE inspection	[2],[3]
3	LCD ALL Segment inspection	[4]
4	CD Unit Loading Test	CD,[≥ 10],[1],[0]
5	CD Unit Traverse Test	CD,[≥ 10],[1],[1]
6	CD Unit Combination Test	CD,[≥ 10],[1],[2]
7	CD Unit Adjustment Test	[≥ 10],[2],[0]
8	SG2 Aging Test	TAPE, FF
9	EEPROM Checksum Check	DOCTOR mode key
10	BBD Check	TAPE,[8]

Note:

- If entering Doctor Mode by numeric buttons, PRESET EQ will be set to OFF.
- In case of error, all the segments of LCD will blink (1 sec on and off) and Doctor Mode shall be retained.

14.2.2. CD Unit Loading Test (Reliability test 1)

- Purpose : To test CD Unit Loading (OPEN / CLOSE aging test) function.
 - The following operation will be carried out.
- Procedures :
 1. Enter into doctor mode (Refer to section 14.2)
 2. Press [≥ 10] followed by [1] & [0] on the remote control.

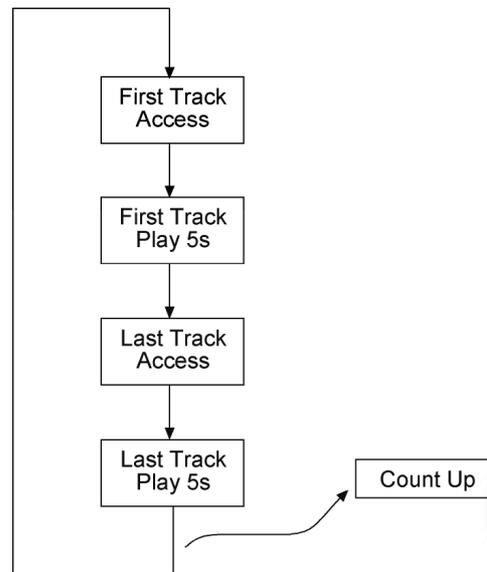

Figure 14-4

3. After a few times, the LCD will display as shown below:

0000:0102

Special Note :

Due to certain reasons, when the following conditions occur, the aging will stop but the count value shall be maintained:

- After 10s, the Disc Access has not yet complete.
- Out of Focus for more than 2s.

14.2.4. CD Unit Combination Test (Reliability test 3)

· Purpose : This test is the combination of the CD OPEN/CLOSE operation and the Inner and Outer Disc Access operation aging test. (Mainly used for CD unit reliability test)

– Operation : During Doctor Mode, when the keys [≥ 10] followed by [1] & [2] are being pressed using the remote control key, the following operation will be carried out.

· Procedures

1. Enter into doctor mode (Refer to section 14.2)
2. Press [≥ 10] followed by [1] & [2] on the remote control key, the following operation will be carried out:

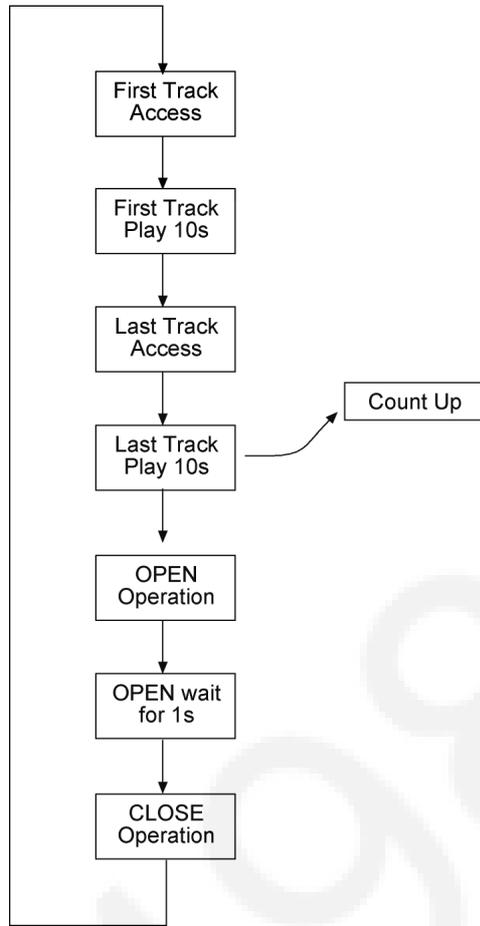

Figure 14-5

3. After a few times, the LCD will display as shown below:

Special Note :

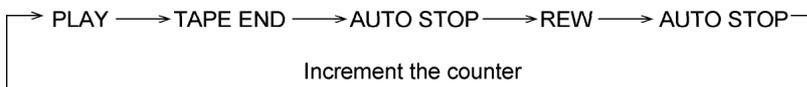

Due to certain reason, when the following conditions occur, the aging will stop but the count value shall be maintained:

- During OPEN operation, after a certain timing, the CD does not open in the OPEN position. (After REST SW is OFF, the CD OPEN SW did not turn ON after 4s.)
- During CLOSE operation, after a certain timing, the CD does not close in the CLOSE position. (After CLOSE operation, REST SW was not turned off in 4s.)
- After 10s, the Disc Access has not yet complete.
- Out of Focus for more than 2s.

14.2.5. Cassette Aging Test (SG2)

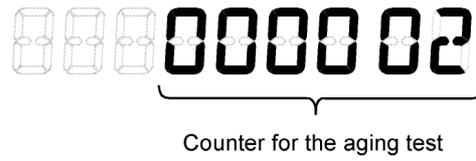

- Purpose : To check the reliability of the SG2 mechanism.
 - Operation: After entering the doctor mode, press [▶|/+ /FF] key on the main set for 2sec, it will enter the Aging Test where the process is as below:
 - Stop Operation: Use Stop key (main set). If stop key is pressed, aging test will stop and remain in doctor mode.
- Procedures :

1. Enter into doctor mode (Refer to section 14.2).
2. Press [▶|/+ /FF] on the main unit. it will enter into the cassette aging mode.

SG2 Aging Test

Example of LCD Display:

A0449860

15 Measurements and Adjustments

15.1. Tuner Section

READ CAREFULLY BEFORE ATTEMPTING ALIGNMENT

1. Set selector switch to AM or TAPE.
2. Set volume level to 40.
3. Output of signal generator should be no higher than necessary to obtain an output reading.

· AM-RF ALIGNMENT

Signal Generator or Sweep Generator Connections		Radio Dial Setting	Indicator (Electronic Voltmeter or oscilloscope)	Adjustment (Shown in Fig.1)	Remarks	
Frequency						
Fashion a loop of several turns of wire and radiate signal into loop of receiver.		594 kHz	Point of non-interference (on/about 600 kHz)	Headphone Jack (32Ω) Fabricate the plug as shown in Fig. 2 and then connect the lead wires of the plug to the measuring instrument.	[*1] L3 (AM ANT coil)	Adjust for maximum output.
Fashion a loop of several turns of wire and radiate signal into loop of receiver.		1503 kHz	Point of non-interference (on/about 600 kHz)	Headphone Jack (32Ω) Fabricate the plug as shown in Fig. 2 and then connect the lead wires of the plug to the measuring instrument.	CT1 (AM ANT Trimmer)	Adjust for maximum output.

[*1] Fix antenna coil with wax after completing alignment.

· FM-RF ALIGNMENT

Signal Generator or Sweep Generator Connections		Radio Dial Setting	Indicator (Electronic Voltmeter or oscilloscope)	Adjustment (Shown in Fig.1)	Remarks	
Frequency						
Fashion a loop of several turns of wire and radiate signal into loop of receiver.		87.5 MHz	Point of non-interference (on/about 600 kHz)	Headphone Jack (32Ω) Fabricate the plug as shown in Fig. 2 and then connect the lead wires of the plug to the measuring instrument.	[*1] L4 (AM IFT)	Adjust for maximum output.

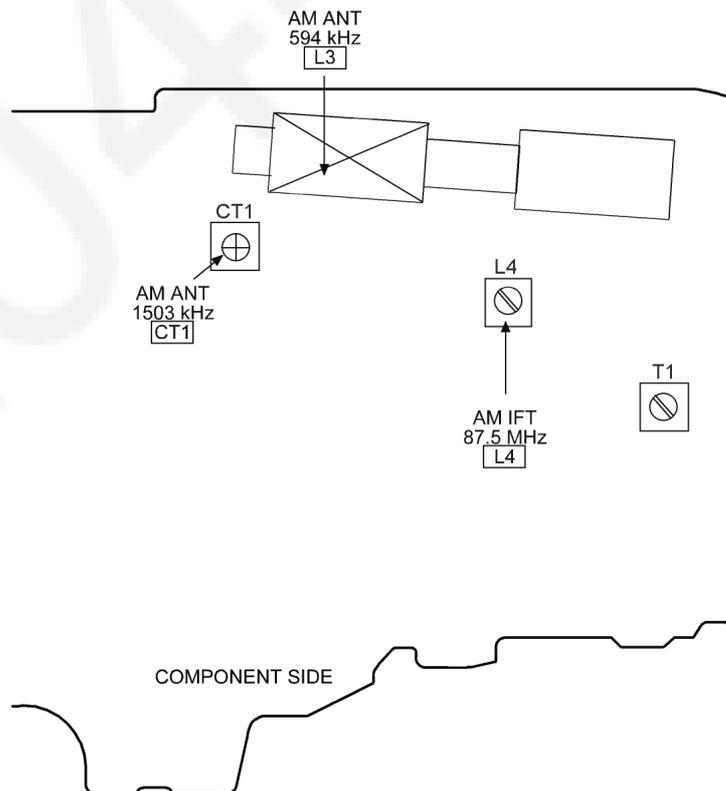

FIG. 1.

15.2. Deck Section

· HEAD AZIMUTH ALIGNMENT

Test Tape	Indicator (Electronic Voltmeter or oscilloscope)	Adjustment	Remarks
QZZCFM (8 kHz, -20 dB)	Headphone Jack (32Ω) Fabricate the plug as shown in Fig. 2 and then connect the lead wires of the plug to the measuring instrument.	Azimuth Screw (Shown in Fig. 3)	1. Insert a test tape (QZZCFM) and start playback in the forward direction. 2. Adjust the azimuth screw for maximum waveform on the oscilloscope and the similar output on L and R channels. 3. When adjusting the azimuth in the reverse direction, repeat the adjustment several times because of a little slip on the forward direction side.

CAUTION:

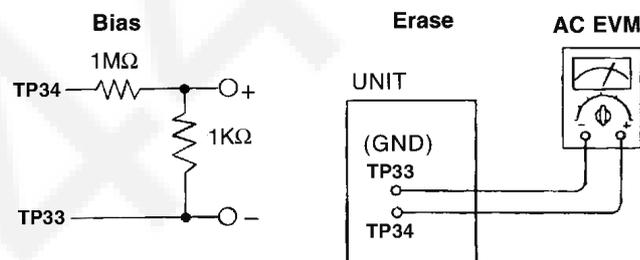

- Please remove the screw-locking bond left on the head base when replacing the azimuth screw.
- After the adjustment, apply screw lock to the azimuth adjusting screw. (Screw-locking bond: RZZ0L01)

· TAPE SPEED ALIGNMENT

Test Tape	Equipment Connection Electronic Counter	Adjustment	Specification	Remarks
QZZCWAT (3 kHz, -10 dB)	Headphone Jack (32Ω) Fabricate the plug as shown in Fig. 2 and then connect the lead wires of the plug to the measuring instrument.	—	3000 ± 90 Hz	Playmode

· BIAS AND ERASE VOLTAGE CHECK

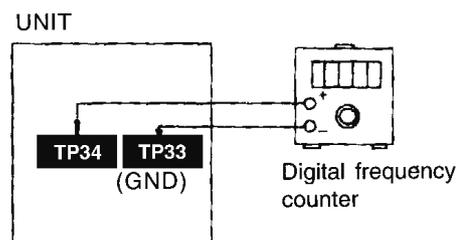

1. Set the unit to "TUNER MODE" position.
2. Insert the Normal blank tape (QZZCRA) into DECK and set the unit to "REC" mode (use "IREC / STOP_n" key).
3. Measure and make sure that the output is within the standard value.
4. Insert the CrO₂ tape (QZZCRX).
5. Repeat steps 2 and 3.

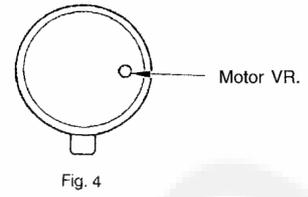

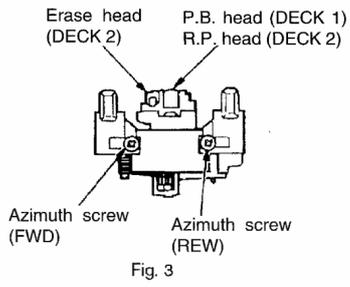

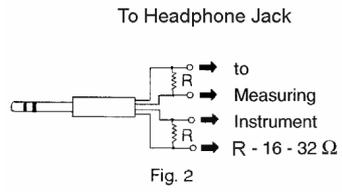

Bias voltage for Deck (Standard value): $17.3 \pm 1\text{mV}$ (Normal)

· BIAS FREQUENCY ADJUSTMENT

1. Set the unit to "TUNER MODE" position.
2. Insert the Normal blank tape (QZZCRA) into DECK and set the unit to "REC" mode (use "IREC / STOP_n" key).
3. Adjust CP1301 so that the output frequency is within the standard value.

Standard value: $100 \pm 7\text{kHz}$

16 Voltage Measurement

Note:

- Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard.
- Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.
- Circuit voltage and waveform described herein shall be regarded as reference information when probing defect point because it may differ from actual measuring value due to difference of Measuring instrument and its measuring condition and product itself.

S975 :	RECINF SWITCH

- The voltage value and waveforms are the reference voltage of this unit measured by DC electronic voltmeter (high impedance) and oscilloscope on the basis of chassis. Accordingly, there may arise some error in voltage values and waveforms depending upon the internal impedance of the tester or the measuring unit.

• Importance safety notice:

Components identified by  mark have special characteristics important for safety. Furthermore, special parts which have purposes of fire-retardant (resistor), high-quality sound (capacitors), low-noise (resistor), etc. are used. When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

Caution !

IC, LSI and VLSI are sensitive to static electricity.

Secondary trouble can be prevented by taking care during repair.

- Cover the parts boxes made of plastics with aluminium foil.
- Put a conductive mat on the work table.
- Ground the soldering iron.
- Do not touch the pins of IC, LSI or VLSI with fingers directly.

24 Troubleshooting Flowchart (CD Section Circuit)

25 Parts Location and Replacement Parts List

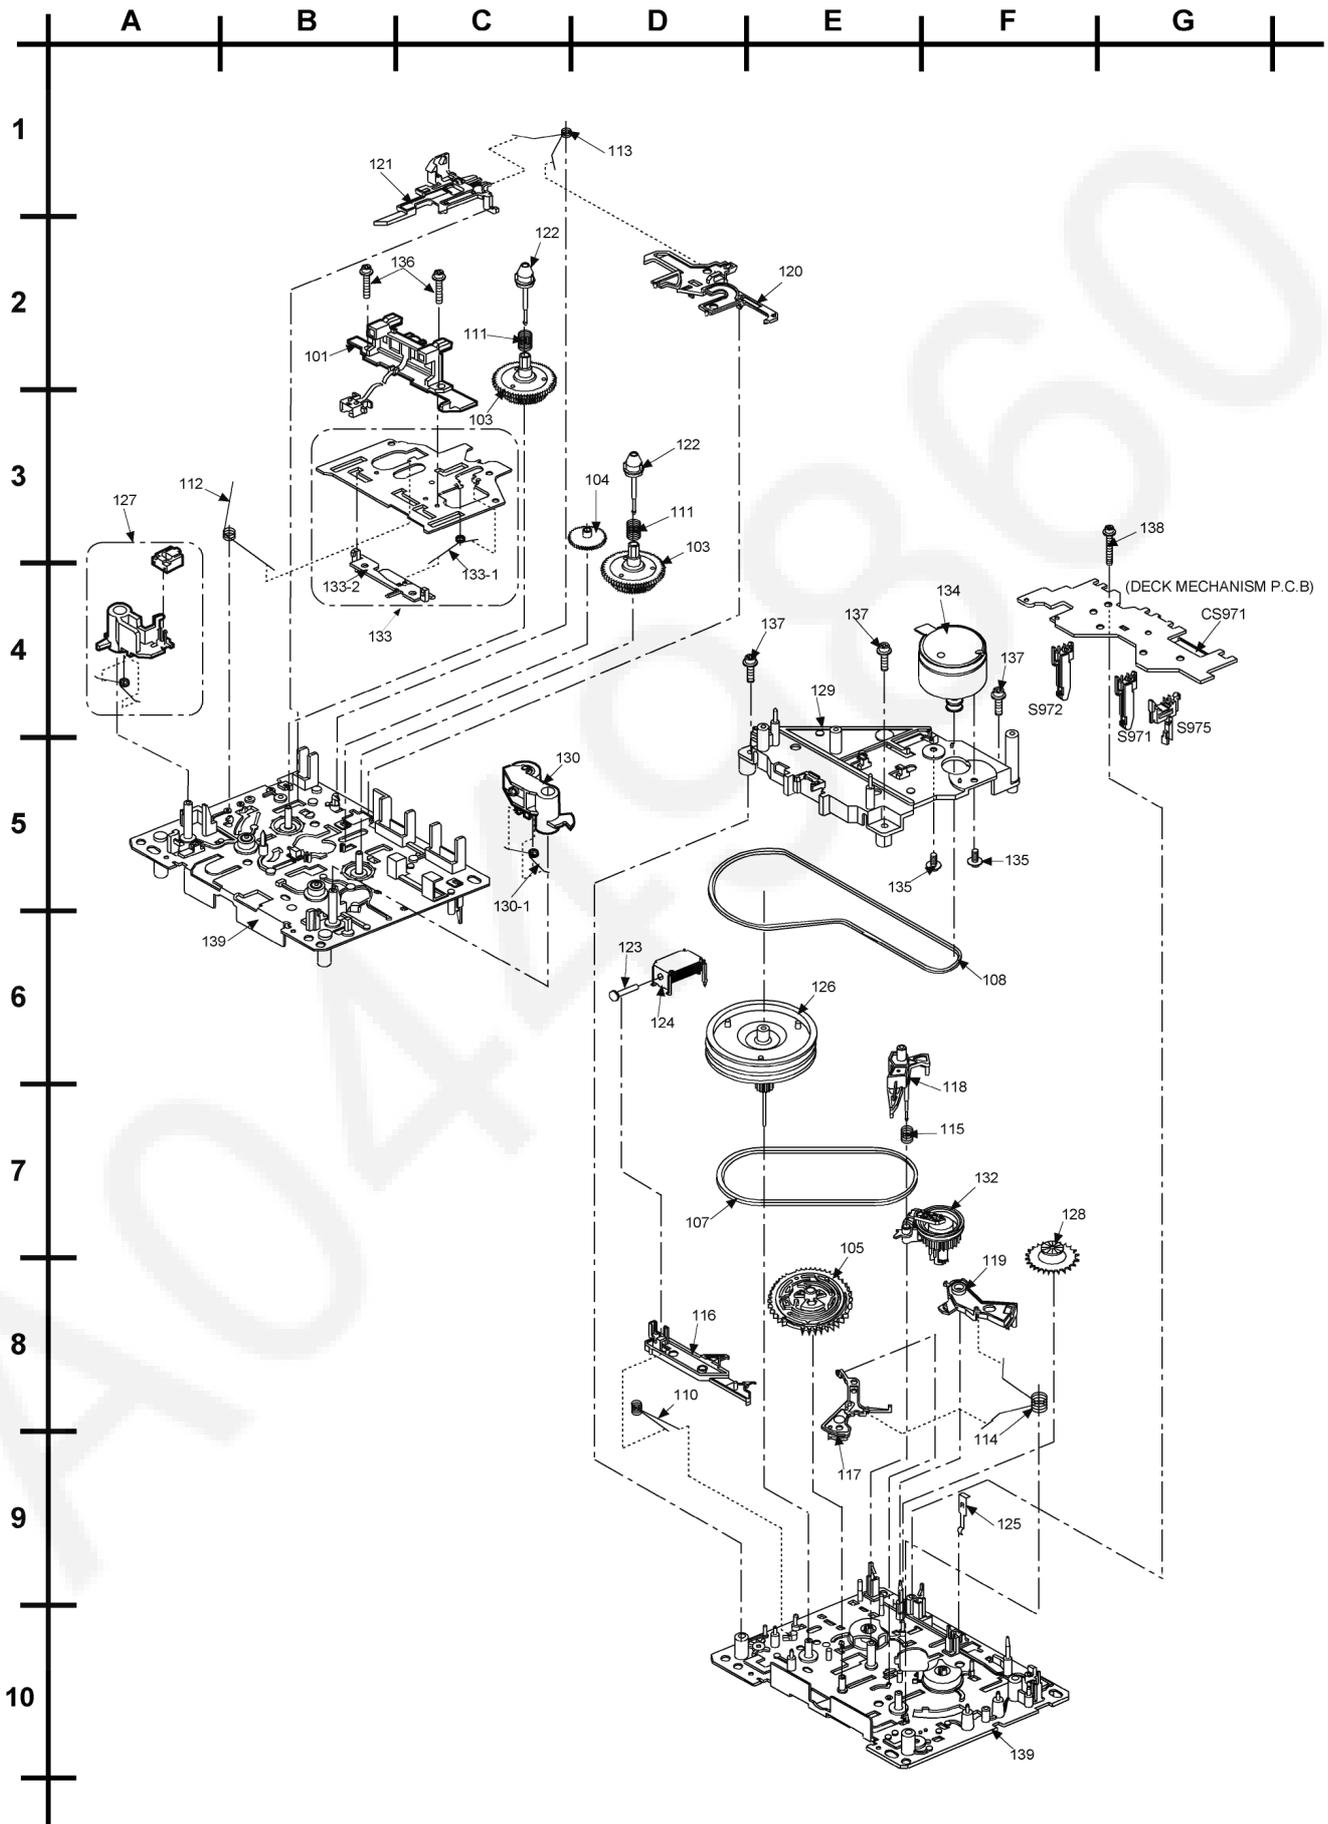

Notes:

- Important safety notice:
Components identified by \triangle mark have special characteristics important for safety.
Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low noise (resistors), etc are used.
When replacing any of these components, be sure to use only manufacturer's specified parts shown in the parts list.
- The parenthesized indications in the Remarks columns specify the areas or colour. (Refer to the cover page for area or colour)
Parts without these indications can be used for all areas.
- Warning: This product uses a laser diode. Refer to Precaution of Laser Diode.
- Capacitor values are in microfarads (μ F) unless specified otherwise, P= Pico-farads (pF), F= Farads.
- Resistance values are in ohms, unless specified otherwise, 1K=1,000 (OHM).
- The marking (RTL) indicates that the Retention Time is limited for this items. After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of a availability is dependent on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.
- [M] Indicates in the Remarks columns indicates parts supplied by **PAVCSG**.
