This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by \triangle in the Schematic Diagrams, Circuit Board Diagrams, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacturer.

3 Troubleshooting Guide

CONDITION	CHECKPOINT	FIGURE	CHECK METHOD	REMEDY
The motor doesn't rotate.	CORD REEL PAR- TITION UNIT	CORD REEL PARTITION UNIT	 Check the continuity at both ends of the Plug and both ends of the Lead Wire Terminal of the Cord Reel Partition Unit. (Dis- connection check) Check the continuity of the Lead Wire connected to the Body Partition Assy. There must be no problems between the Cord Reel Assy and the Body Partition Assy (e.g. burns in the contact, entry of dust). 	 If there is no continuity, replace the Cord Reel Assy, Body Parti- tion Assy, or Cord Reel Partition Unit.
	MOTOR	MOTOR	 Check the continuity between the terminals of the Motor. Confirm that the Motor can be rotated by fingers without being locked. Visually check for burns in the Motor (e.g. burns in the coil). 	 If there is a problem, replace the Motor Set. * Also check and replace the ON/OFF Switch (with the Fuse Unit).
	POWER CON- TROL UNIT	POWER CONTROL UNIT POWER CONTROL UNIT TRIAC T1 T2 G	 There must be no broken components. If they are normal: T1-T2: There is not continuity. T1-G: There is continuity. There must be no broken foil of the Printed Circuit Board. There must be no breaks in the Lead Wires. 	 If there is a problem, replace the Power Control Unit.
1. The Motor doesn't rotate.	FUSE UNIT THERMO PRO- TECTER ON/OFF SWITCH	ON/OFF SWITCH FUSE UNIT THERMO PROTECTER	 Check if the Fuse has blown. Causes of fuse blowing: Overcurrent Burn of the Motor Short-circuiting due to incorrect wiring Continuity check. Check the continuity by pressing the ON/OFF Switch. 	 Replace the ON/OFF Switch (with the Fuse Unit/Thermo Pro- tector). *If a burn in the Motor caused the Fuse to blow, then also replace the Motor.
2. The Power Con- trol doesn't func- tion.	POWER CON- TROL UNIT	POWER CONTROL UNIT	 Check that the Triac has not been short-circuited. If there is continuity between T1 and T2, then there is a problem in the components. 	Replace the Power Control Unit.
	POWER CON- TROL SWITCH	POWER CONTROL SWITCH	The resistance between A and B must be switchable. * See the circuit diagram (6. Printed Circuit Board) for the switch resistances.	Replace the Power Control Switch.

CONDITION	CHECKPOINT	FIGURE	CHECK METHOD	REMEDY
The Cord cannot be pulled out. 1. The Cord cannot be rewound. 2. The pulled out Cord cannot be locked.	CORD REEL PAR- TITION UNIT	CORD REEL U BREKE LEVER U	 If the Cord cannot be pulled out, press the Brake Lever and con- firm that the Cord can be rewound. Repeat operations to rewind and pull out the Cord two or three times and confirm that it can be normally rewound. Separate the Body and; Confirm that a sufficient number of spare turns have been made. Confirm that the Cord Reel Spring is working. 	 If it is impossible to resolve the problem due to an abnormal condition of the Cord, separate the Body, untwist the Cord, and rewind it. Or, replace the Cord Reel Unit and rewind the Cord. Make spare turns according to the engraved number of turns, or; Replace the Cord Reel Unit. Replace the Cord Reel Parti-
1. The suction power is low. 2. The Motor stops during vacuuming. (The Thermo Pro- tector works.)	DAST BAG FIL- TER EXTENSION WAND UNIT HOSE	DAST BAG FILTER EXTENSION WAND UNIT HOSE UNIT	 Confirm that the Brake Lever Unit is working correctly to stop the Cord from rewinding. Check for clogging with dust. Dust Bag Filter (in the Dust Box) Hose Extension Wand 	tion Unit. Remove dust. • Replace any broken Dust Bag, Filter, and/or Hose.

Disassembly and Assembly Instructions 4

Important: Always turn the vacuum cleaner's power off before replacing components. Remove the power cord and plug from the mains.

Attention

(1) When disassembling the vacuum cleaner, check the connections and wiring (pulling) of each component, and ensure that everything is restored correctly once repairs are complete.

(2) Handle all disassembled components and packing with care, and be sure to replace any components that may be accidentally damaged.

(3) Once repair operations are complete, always inspect the area around the repairs for any degradation, and ensure that all components that were removed for repair have been replaced in the correct wiring configurations. It is also necessary to test the operation of the vacuum cleaner and ensure that it is safe for subsequent use.

Insulation resistance:

Must be at least 5M Ω when a direct current of 500V is applied between the power plug terminals and the exterior of the motor.

· Dielectric strength:

Must be able to withstand 1250V of alternating current applied between the power plug terminals and the exterior of the motor for one minute.

(4) Do not make changes to models, components, or materials during repairs and services.

(5) If a wiring unit has been supplied as a spare part, the wiring unit must be simply replaced as it is, without any additional repairs or connections made to even part of the wiring.

(6) Insert/remove the fast-on terminals by pushing/pulling them straight out without jiggling them or applying unnecessary force.

4.1. Removal of Dust Cover

1. Open Dust Cover Unit and insert a slotted screwdriver between the Dust Cover Unit and Upper Body Unit. Move the screwdriver in the direction of the arrow and remove the Dust Cover Unit by pulling it upward.

2. Disengage the four hooks of the Dust Box Plate.

3. Remove the Dust Box Plate, Hose Fitting Rubber, and Suction Inlet from the Dust Cover.

4.2. Removal of Dust Bag Holder

1. Insert a slotted screwdriver into the joint of the Dust Bag Holder in the Lower Body Unit and take out the Dust Bag Holder.

* Be careful not to lose the Spring on the back of the Dust Bag Holder.

Fig.4

Assembling:

- 1. The assembly operation is the reverse of that of disassembly.
- 2. Check that the Dust Bag Holder works properly.

* Don't forget to attach the Spring.

4.3. Removal of Body Cover Unit, Cord Rewind Button, and Switch Pedal

1. Remove the screw of the Body Cover Unit.

Fig.6

2. Remove the Body Cover Unit from the two projections of the Upper Body Unit using a slotted screwdriver as shown in the figure below.

Fig.7

- 3. Remove the Cord Rewind Button and the ON/OFF Switch Button.
 - Caution: (Spring is placed inside.)
 - * Be careful not to lose the Spring.

4.4. Removal of Upper Body Unit and Power Control Switch

- 1. Remove the four screws of the Upper Body Unit.
- 2. Slowly pull up and remove the Upper Body Unit.

3. Remove the screw of the Power Control Switch and then remove the Power Control Switch.

4.5. Removal of ON/OFF Switch (with Fuse and Capacitor)

1. Remove the Fuse Unit and the ON/OFF Switch from the Motor Support Cover Unit.

2. Remove the Capacitor.

Fig.12

4.6. Moter Assy(with motor support cover and motor case)

1. Remove the Motor Assy from the Lower Body Unit.

2. Pinch the stopper of the Motor Case Unit with needlenose pliers as shown in the figure below and remove the Power Control Unit.

4.7. Removal of Motor Set

- 1. Remove the Motor Support Cover Unit.
- 2. Remove the Motor Set from the Motor Case Unit.

- 3. Remove the screws from the Motor Support Rubber and then remove the Motor Support Rubber (two pieces).
- 4. Remove the Noise Suppressor Unit.
- 5. Remove the Lead Wires.
- 6. Remove the Motor Support Rubber (Front).

4.8. Removal of Thermo Protector

1. Remove the Thermo Protector.

* The Thermo Protector is supplied as an assembly with an ON/OFF Switch Unit (with Thermo Protector and Fuse).

4.9. Removal of Cord Reel Partition Unit

- 1. Remove the Cord Reel Partition Unit from the Lower Body by holding its rear side and lifting it up in a backward direction.
- 2. Cut the Lead Wires at the base of the Wire Connector.

Fig.18

% Use the dedicated tool to crimp the crimp contact.

Assembling:

When replacing the Cord Reel Partition Unit with a new one, connect it using Wire Connector CE-230 and wrap Gasket V (Glass Tape) around it.

4.10. Removal of Cord Reel Unit

1. Press the Brake Lever Unit of the Cord Reel Partition Unit to unwind spare turns.

2. Remove the center screw and remove the Cord Reel Unit.

Fig.21

Assembling: * When replacing the Cord Reel Unit with a new one, place it in the Body Partition in the reverse order of disassembly by screwing it.

5 Wiring Connection Diagram

* When using the Wire Connector (CE-230) for connection purposes, be sure to wrap Gasket V (Glass Tape) around it.

After removing the Tape from the other parts, also be sure to wrap the Tape around them.

Attach Gasket V (AMC56L18000J) when repairing.

Gasket V included with the Parts Unit

6 Printed Circuit Board

* Press switches A through D and measure the resistance between the Lead Wires of the switch.
