## WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product dealt with in this service information by anyone else could result in serious injury or death.

## WARNING

* This product should be serviced only by trained, qualified personnel.

This service manual covers products for following markets.
When troubleshooting or replacing parts, please refer to the country identifications shown below for your applicable product specification. BPQ ... for the United Kingdom

DANGER OF HIGH VOLTAGE AND HIGH TEMPERATURE (HOT/LIVE) OF THE INVERTER POWER SUPPLY(U)

## INVERTER WARNING NEW H.V.

This Inverter board looks like a regular PCB, however, this PCB drives the magnetron tube with extremely high voltage and high current.
IT HAS: 1: Very high voltage and high current circuit. It functions the same as the high voltage transformer and high voltage capacitor in ordinary microwave ovens.
2. aluminium heat sink is very hot.
3. Very high voltage may remain in the circuitry even when the oven is off. High voltages may remain in the capacitors on the board.

DO NOT: *1. Do not touch the circuitry as it becomes very hot (high voltage). Even when replacing board, extreme care should be taken to avoid possible electric shock. High voltage may remain in the circuit.
*2. Do not touch aluminium heat sink because it is very hot in high voltage and also very hot in high heat energy.
*3. Do not try to repair the Inverter PCB as this can be very dangerous. Replace the whole High Voltage Inverter Circuit(U) unit and return fully re-packed with the original shopping box and shipping materials.
*4. Do not try to adjust or tamper with the preset volume on the Inverter board because it is very dangerous to adjust it without proper test equipment.
*5. Do not test oven while Inverter grounding strip or screws are loose. It is very dangerous to operate the H.V. Inverter Circuit (U) with loose mounting screws or if improperly grounded.

INVERTER POWER SUPPLY DIAGRAM

DO NOT REPAIR. REPLACE WHOLE H.V.INVERTER(U)

NN-V689

(1) Display Window
(2) Time Pads
(3a) Auto Weight Microwave Programs
(3b) Auto Sensor Microwave Program
(4a) Auto Weight Combination Programs
(4b) Auto Sensor Combination Programs
(5) Auto Weight Defrost Programs
(6) Microwave Power Setting
(7) Grill Setting
(8) Combination Pad
(9) Delay/Stand Pad:

This can be used to delay a cooking program for up to 9 hrs 99 mins., or used to time or for standing (non-cooking) time.
(10) Clock Pad

Press the clock pad. Using the minute and second pads set the clock (12 hr clock). Press clock pad again to stop colons flashing.
lb/oz Conversion Pad
Weight Selection Pads
Stop/Cancel Pad:
Before Cooking:
One press clears your instructions.

## During Cooking:

One press temporarily stops the cooking program. Another press cancels all your instructions and the time of day will appear in the display.
(14) Start Pad:

Press to start operating the oven. If during cooking the door

* The design of your control panel may vary from the panel displayed (depending on colour), but the words on the pads will be the same.

## Beep Sound

A beep sounds when a pad is pressed. If this beep does not sound, the setting is incorrect. When the oven changes from one function to another, two beeps sound. After completion of cooking, five beeps sound

## 2．OPERATION AND DIGITAL PROGRAMMER CIRCUIT TEST PROCEDURE

Operation guide on the display．
To assist in programming，the next operation will appear on the display．When you are used to operating the oven，you can turn the operating guide off．

To turn off：
Press 3 times

1．SET CLOCK

| OPERATION | DISPLAY |
| :---: | :---: |
| 1．Plug the power supply cord into the wall outlet | WELCOME TO PANASONIC．REFER to operating instructions |
| 2．Press clock pad <br> Clock | SET TIME |
| 3．Enter time of day <br> Once＿ | $\begin{gathered} 11 \text { 米 } 25 \\ -\quad-\quad \text { PRESS CLOCK } \end{gathered}$ |
| 4．Press clock <br> Clock | 11：25 |

2．MICROWAVE COOKING－2 STAGE

| OPERATION | DISPLAY |
| :---: | :---: |
| 1．Place water load in oven |  |
| 2．Press Micro Power once to set High Power <br> 园 <br> Micro Power | HIGH $\square$ <br> SET TIME |
| 3．Set time at 5 sec by pressing 1 sec pad 5 times | $\approx \begin{array}{ll} 5 \text { SEC } \\ -\approx & \begin{array}{l} \text { PRESS START } \\ \text { HIGH } \end{array} \end{array}$ |
| 4．Press Micro Power pad 3 times to set Medium Power | MEDIUM <br> SET TIME |
| 5．Set for 1 minute by pressing 1 min pad once |  |

To turn on：
Press 3 times

| OPERATION | DISPLAY |
| :---: | :---: |
| 6．Press start pad | $\begin{array}{lc} 5 & 5 \\ \approx & S E C \end{array}$ |
| 7．When 1st stage cooking has elapsed oven automatically switches to 2nd stage | $\begin{array}{lll} \text { EJ } & 1 & 00 \\ \text { 玉 } & M I N & S E C \end{array}$ |
| 8．When 2nd stage cooking has elapsed oven beeps 5 times and shuts off | OPEN DOOR |

3．AUTO WEIGHT DEFROST

| OPERATION | DISPLAY |
| :---: | :---: |
| 1．Select desired program | MEAT ITEMS SET WEIGHT |
| 2．Press g or lb and oz $g \left\lvert\, \begin{gathered} \mathrm{Ib} \\ \mathrm{oz} \end{gathered}\right.$ | LB OZ MEAT ITEMS SET WEIGHT |
| 3．Enter the weight by pressing up and down pads <br> NN－V689 | $\begin{aligned} & 1 L B \text { OZ } \\ & \text { PRESS START } \\ & \approx{ }^{*} \end{aligned}$ |
| 4．Press start pad | $\begin{array}{lcc} \text { Tj} & 9 & 08 \\ \text { MIN } & \text { SEC } \\ \approx & * * & \end{array}$ |

4. DELAY STAND

| OPERATION | DISPLAY |
| :---: | :---: |
| 1. Set power level and time |  |
| 2. Press stand <br> Delay/ Stand | $\begin{aligned} & \text { STAND } \\ & \text { SET TIME } \end{aligned}$ |
| 3. Set standing time | $\begin{array}{cc} \text { H } 1 & 00 \\ \text { PRESS START } \end{array}$ |
| 4. Press start |  |

5. DELAY START

| OPERATION | DISPLAY |
| :---: | :---: |
| 1. Press delay | DELAY START <br> SET TIME |
| 2. Set delay time | $\text { H } 100$ <br> CHOOSE COOKING MODE |
| 3. Set power level and time |  |
| 4. Press start pad | 1H 00 |

6. GRILL OPERATION

| OPERATION | DISPLAY |
| :---: | :---: |
| 1. Select grill power press once for grill 1 | GRILL 1 SET TIME $\square$ |
| 2. Set cooking time | $\begin{aligned} & 1 \\ & \text { MIN } 00 \\ & \text { SEC } \\ & m \end{aligned}$ |
| 3. Press start | $\begin{array}{ccc} 1 & 00 \\ \text { IJ } & \text { MIN } & \text { SEC } \end{array}$ $\square$ |

7. COMBINATION COOKING

| OPERATION | DISPLAY |
| :---: | :---: |
| 1. Press combination $\square$ <br> Combination | COMBINATION SELECT GRILL LEVEL $\square$ |
| 2. Press stand | GRILL 1 $\square$ <br> SELECT MICROPOWER |
| 3. Select micropower low <br> 玉 <br> Micro Power | LOW <br> SET TIME |
| 4. Set cooking time | $\begin{array}{cc} 1 & 00 \\ M I N & \text { SEC } \\ \approx & \\ \text { PRESS START } \end{array}$ |
| 5. Press start | $\begin{array}{lcc} \text { TJ } & 1 & 00 \\ \text { MIN } & \text { SEC } \\ \approx & m & \end{array}$ |

| Clock | $11: 25$ |

3. SCHEMATIC DIAGRAM

## WIRING DIAGRAM

NOTE: *When replacing, check the lead colour as shown.
*Colours shown by () indicate colours of leadwire connector housing.

POWER RELAY
(RY1)

## 4. DESCRIPTION OF OPERATING SEQUENCE

### 4.1 Variable power cooking control

HIGH VOLTAGE INVERTER POWER SUPPLY (U) controls output power by a signal from Digital Programmer Circuit (DPC). Power relay 1 stays on to supply power to the inverter circuit. The outpower is controlled by the drive signal level from the inverter circuit.
NOTE 1: The ON/OFF time ratio does not correspond with the percentage of microwave power since approximately 2 seconds are required for heating of magnetron filament.
NOTE 2: If microwave cooking is over 8 minutes with HIGH power, fan motor rotates for 1 minute after cooking to cool oven and electric components.

### 4.2 Grill cooking

The digital programmer circuit operates power relay 4 in the sequence as shown in the table

### 4.3 Combination cooking

Combination cooking is accomplished by microwave and grill cooking. The digital programmer circuit controls ON-OFF time of power relay 4 and the inverter control signal level, as shown in the table.
NOTE: After grill and combination cooking, fan motor rotates for 1 minute to cool oven and electric components.

### 4.4 Autoweight defrost, autoweight cook

When those auto control feature is selected and Start pad is pressed:

1. The digital programmer circuit determines the power level and cooking time to complete cooking and indicates the operating state in the display. The table shows the corresponding cooking times for respective weight by categories.
2. When cooking time in the display window has elapsed, the oven turns off automatically by the controlled signal from the digital programmer circuit.
NOTE: After one touch menu and auto reheat cooking, fan motor rotates for 1 minute to cool oven and electric components.

VARIABLE POWER COOKING

| POWER <br> SETTING | OUTPUT <br> POWER <br> APPROX. | RY-1 | INVERTER <br> CONTROL <br> SIGNAL |
| :--- | :---: | :---: | :---: |
| HIGH | 900 W | stay ON | stay ON |
| DEFROST | 270 W | stay ON | ON/OFF |
| MEDIUM | 600 W | stay ON | stay ON |
| LOW | 440 W | stay ON | stay ON |
| SIMMER | 250 W | stay ON | ON/OFF |
| WARM | 100 W | stay ON | ON/OFF |

GRILL COOKING

| GRILL NO. | HEATER (RY-4) |  |
| :---: | :---: | :---: |
|  | ON (SEC) | OFF (SEC) |
| 1 | 33 | 0 |
| 2 | 24 | 9 |
| 3 | 18 | 15 |

COMBINATION COOKING

| COMBINATION <br> NO. | HEATER (RY-4) |  |  | MICROPOWER LEVEL |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ON (SEC) | OFF (SEC) | LOW | SIMMER | WARM | MED |  |
| 1 | 33 | 0 | 0 | 0 | 0 | 0 |  |
| 2 | 24 | 9 | 0 | 0 | 0 | 0 |  |
| 3 | 18 | 15 | 0 | 0 | 0 | 0 |  |

## AUTOWEIGHT DEFROST

| CATEGORY | WEIGHT | COOKING TIME |
| :--- | :---: | :---: |
| BREAD | 100 g | 50 seconds |
| MEAT ITEMS | 150 g | 2 mins 21 Secs |
| MEAT JOINTS | 400 g | 7 mins |

## AUTOWEIGHT COOK

| CATEGORY | WEIGHT | COOKING TIME |
| :--- | :---: | :---: |
| CHILLED MEAL | 200 g | 2 mins 50 secs |
| FROZEN MEAL | 200 g | 6 mins 40 secs |
| FRESH VEG | 100 g | 2 mins 20 secs |
| FRESH FISH | 100 g | 1 min 10 secs |
| JACKET POTATOES | 200 g | 9 mins 20 secs |
| FROZEN POTATOES | 100 g | 4 mins 40 secs |

### 4.5 Auto Sensor cook NN-V689WB

Auto sensor cooking is a revolutionary way to cook by microwave without setting a power level or selecting a time.
All that is necessary is to select an Auto Sensor Program before starting to cook.

## Understanding Auto Sensor Cooking

As a food cooks, a certain amount fo steam is produced. If the food is covered, this steam builds up and eventually escapes from the container. In Auto Sensor Cooking, a carefully designed instrument, called the steam sensor element, senses this escape of steam. Then, based upon the Auto Sensor Programme selected, the unit will automatically determine the correct power level and the proper length of time it will take to cook the food.
NOTE: Auto Sensor Cooking is successful with the foods and recipes found in the Auto Sensor Cooking Guide. Because of the vast differences in food composition, items not mentioned in the Cooking Guide should be prepared in the microwave oven using power select and time features. Please consult Variable Power Microwave Cookbook for procedures.

## Explanation of the Auto Sensor Cooking process

1. During the first 10 second period there is no microwave activity, and when calculating the T2 time by using the formula below make sure this 10 seconds is subtracted from the T1 time. In other words the T1 time starts at the end of the 10 second period.
2. T1 Time...The total amount of time it takes the microwave oven to switch to T 2 time after the 10 second period.
3. T2 Time...When the steam escapes from the cooking container placed in the oven, the steam sensor detects it and the microprocessor calcuates the balance of the cooking time. This T2 time is then shown on the display and the begins counting down.
Balance of cooking time (T2 time)
The balance of cooking time which is called T2 time, can be calculated by the following formula.

T2 time (in sec.) = T1 time $\times \mathrm{K}$ factor
NOTE: Remember, the T1 time starts after the 10 second period. The coefficient $K$ is programmed into the microprocessor memory and they are listed in the following table along with P1 and P2 powers.
NOTE: When "More" or "Less" pad is selected, the K factor varies resulting in T2 time to be increased or decreased.
Example of calculating T2 time
Example 1: If the T1 time is measured to be 2 minutes and 40 seconds after the 10 second period, and the Auto program selected is Fish:
$\mathrm{T} 2=\mathrm{T} 1 \times \mathrm{K}$
$=2 \mathrm{~min}$. and $40 \mathrm{sec} . \times 0.1$
$=160 \mathrm{sec} . \times 0.1$
$=16 \mathrm{sec}$.

AUTO SENSOR COOK

| CATEGORY | P1 POWER | P2 POWER | K FACTOR |
| :--- | :---: | :---: | :---: |
| FRESH VEG | HIGH | HIGH | 0.3 |
| FROZEN VEG | HIGH | HIGH | 0.1 |
| FRESH FISH | HIGH | HIGH | 0.1 |
| FROZEN FISH | HIGH | HIGH | 0.1 |

## AUTO SENSOR COOK COMBINATION

| CATEGORY | P1 POWER | P2 POWER |  |  | P3 POWER |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| JACKET <br> POTATOES | MICRO | GRILL | MICRO | K <br> FACTOR | GRILL | COOK <br> TIME |
|  | HIGH | 1 | MED | 1 | 1 | 120 s |

## 5. CAUTIONS TO BE OBSERVED WHEN TROUBLESHOOTING

Unlike many other appliances, the microwave oven is highvoltage, high-current equipment. Though it is free from danger in ordinary use, extreme care should be taken during repair.

## CAUTION

Servicemen should remove their watches whenever working close to or replacing the magnetron.

### 5.1 Check the grounding

Do not operate on a 2-wire extension cord. The microwave oven is designed to be used when grounded. It is imperative, therefore, to make sure it is grounded properly before beginning repair work.

### 5.2 Inverter Warnings NEW H.V.

## DANGER OF HIGH VOLTAGE AND HIGH TEMPERATURE (HOT/LINE) OF THE INVERTER POWER SUPPLY (U)

 This High Voltage Inverter Power Supply circuit handles very high voltage and very high current for the magnetron tube. Though it is free from danger in ordinary use, extreme care should be taken during repair. As you can see, it looks like a TV flyback transformer, however the current is extremely large and so danger exists by its high current and high voltages.The aluminium heat sink is also energized with high voltage (HOT), so do not touch when AC input terminal is connected to the power devices (Collector) is directly connected to the Aluminium heat sink.
The Aluminium heat sink may be HOT by heat energy; therefore, extreme care should be taken during servicing and replacing.

[^1]

## WARNING OF DISCHARGING HIGH VOLTAGE CAPACITORS

Warning about the electric charge in the high voltage capacitors. For about 30 seconds after the oven is turned off, an electric charge remains in the high voltage capacitors in the inverter power supply circuit board.
When replacing or checking parts, remove the power plug from the outlet and short the Inverter output terminal of the magnetron filament terminals to the chassis ground with an insulated handle screwdriver to discharge. Please make sure to touch chassis ground side first then short to the output terminals.

#### Abstract

WARNING There is high-voltage present, with high-current capabilities in the circuits of the primary, and secondary windings, choke coil and heat sink of the Inverter. It is extremely dangerous to work on or near these circuits with oven energized. DO NOT measure the voltage in the high voltage circuit including filament voltage of magnetron.

## WARNING

Never touch any circuit wiring with your hand nor with an insulated tool during operation.

### 5.3 When parts must be replaced, remove the power plug from the outlet.

### 5.4 When the 10A fuse is blown due to the operation of short switch:

## WARNING

When the 10A 250 V . fuse is blown due to the operation of short switch, you must replace Primary latch switch and short switch. Also replace power relay 1 (RY1) when the continuity check reads shorted contacts (1-2).

1. This is mandatory. Refer to "Adjustments and Measurement" for these switches.
2. When replacing the fuse, confirm that it has the appropriate rating for these models.
3. When replacing faulty switches, be sure mounting tabs are not bent, broken or otherwise deficient in their ability to hold the switches.

### 5.5 Avoid inserting nails, wire, etc. through any holes in the unit during operation.

Never insert a wire, nail or any other metal object through the lamp holes on the cavity or any other holes or gaps, because such objects may work as an antenna and cause microwave leakage.

### 5.6 Confirm after repair

1. After repair or replacement of parts, make sure that the screws of the oven, etc. are neither loose nor missing. Microwaves might leak if screws are not properly tightened.
2. Make sure that all electrical connections are tight before inserting the plug into the wall outlet.
3. Check for microwave energy leakage. (Refer to procedure for measuring microwave energy leakage).

## CAUTION <br> MICROWAVE RADIATION

DO NOT BECOME EXPOSED TO RADIATION FROM THE MICROWAVE GENERATOR OR OTHER PARTS CONDUCTING MICROWAVE ENERGY.

## IMPORTANT NOTICE NEW H.V.

1. The following components have potentials above 250 V while the appliance is operated.

- Magnetron
- High voltage transformer (Located on Inverter(U))
- High voltage diodes (Located on Inverter(U))
- High voltage capacitors (Located on Inverter(U))

Pay special attention on these areas.
When the appliance is operated with the door hinges or magnetron is fixed incorrectly, the microwave leakage can reach more than $5 \mathrm{~mW} / \mathrm{cm}^{3}$. After repair or exchange, it is very important to check if the magnetron and the door hinges are correctly fixed.

### 5.7 Sharp edges

## CAUTION

Please use caution when unpacking, installing or moving the unit, as some exposed edges may be sharp to touch and may cause injury if not handled with care.

## 6. DISASSEMBLY AND PARTS REPLACEMENT PROCEDURE

### 6.1 Magnetron

1. Discharge the high voltage capacitors.
2. Remove 1 screw holding the air guide $A$.
3. Remove 2 screws holding the tie bar.
4. Remove the oven lamp and lead wire harness cables from the Air guide A.
5. Remove the Air Guide A
6. Disconnect the 2 high voltage lead wires from the magnetron.
7. Remove 4 screws holding the magnetron.

NOTE: After replacement of the magnetron, tighten mounting screws properly making sure there is no gap between the waveguide and the magnetron to prevent microwave leakage.

## CAUTION

When replacing the magnetron, be sure the antenna gasket is in place.

## NOTE

Magnetron used for this model is unique type for inverter power supply system. Make sure to use the one as listed in the part list.

### 6.2 Inverter Power Supply(U)

NEW H.V.

1. Discharge the high voltage capacitors.
2. Unplug 3 lead wire connectors from the Inverter Power Supply board.
3. Remove 1 screw to release the inverter grounding bracket.
4. Remove 1 screw and remove the inverter PCB plus support base from the oven.
5. Remove 1 screw to disconnect earth wire to magnetron.
6. Remove 4 screws holding inverter power supply board to the Inverter bracket.
7. Replace with replacement PCB and follow the steps in reverse.

## CAUTIONS WHILE REPLACING INVERTER POWER SUPPLY(U)

1. Make sure to leave grounding plate in its place.
2. Make sure to securely tighten grounding screw through the side of chassis (base).
3. Securely connect 3 lead wire connectors.
4. Make sure the heat sink has enough space (gap) from the oven. Take special care not to touch any lead wire to the aluminium heat sink because it is hot.

### 6.3 Digital Programmer Circuit (DPC) and membrane key board.

NOTE: Be sure to ground any static electric charge built up on your body before handling the DPC.

1. Disconnect all connectors from D.P.C.
2. Remove 2 screws holding escutcheon base and slide the escutcheon base upward slightly.
3. Remove 1 screw holding earth wire to the chassis.
4. Release flat cable.
5. Remove 6 screws holding DPC DU.
6. Remove door lever.
7. Remove 6 screws holding DPC AU. To replace membrane key board
8. Remove escutcheon bracket from escutcheon base by freeing 4 catch hooks on the escutcheon base.
9. Remove display window.
10. Remove membrane assembly by pushing away from base.

NOTE: 1. The membrane key board is attached to the escutcheon base with double faced adhesive tape. Therefore, applying hot air such as using a hair dryer is recommended for smoother removal.
2. When installing new membrane key board, make sure that the surface of escutcheon base is cleaned sufficiently so that any problems (shorted contacts or uneven surface) can be avoided.
3. When replacing the silver escutcheon sheet (NNV629MB) ensure the escutcheon sheet is earthed to the backplate via the earth strip.

### 6.6 Door disassembly

1. Remove door C from door E by carefully pulling outward starting from upper right hand corner using a flat blade screwdriver.
2. Remove 4 screws holding door E to door A assembly to separate door $E$ from door $A$.
3. Remove door key and door key spring.

After replacement of the defective component parts of the door, reassemble it and follow the instructions below for proper installation and adjustment so as to prevent an excessive microwave leakage.

1. When mounting the door to the oven, be sure to adjust the door parallel to the bottom line of the oven face plate by moving the upper hinge and lower hinge in the direction necessary for proper alignment.
2. Adjust so that the door has no play between the inner door surface and oven front surface. If the door assembly is not mounted properly, microwave power may leak from the clearance between the door and oven.
3. Perform the microwave leakage test.

### 6.7 Turntable motor

1. Remove the motor cover by breaking off at the 8 spots indicated by arrows. (See Figure)
NOTE: After breaking off the motor cover, make sure that cut-off portions are properly trimmed off or bend to inside so that no sharp edge will expose to outside.
2. Disconnect 2 lead wires connected to the turntable motor.
3. Remove the turntable motor by removing 2 screws.

NOTE: To reinstall the motor cover, use $4 \times 6$ screw.

### 6.8 Quartz heater

1. Disconnect lead wires from heater terminals.
2. Remove 1 screw holding heater supports.
3. Remove the heater.

### 6.9 Steam Sensor NN-V689WB

1. Remove 1 screw holding steam sensor unit.
2. Disconnect CN2 connector from digital programmer circuit board.
3. Remove exhaust guide from steam sensor unit.
4. Remove catch hooks on sensor mounting plate and air guide.
5. Remove steam sensor from sensor mounting plate.

NOTE: When installing the steam sensor, make sure that the direction of the steam sensor is as shown in figure.

## 7. COMPONENT TEST PROCEDURE

## CAUTION NEW H.V.

1. High voltage is present at the high voltage terminal of the High Voltage Inverter(U) including aluminium heat sink during any cook cycle.
2. It is neither necessary nor advisable to attempt measurement of the high voltage.
3. Before touching any oven components, or wiring, always unplug the oven from its power source and discharge the high voltage capacitors.

### 7.1 Primary Latch Switch, Secondary (Secondary Latch Switch and Power Relay B) Interlocks.

1. Unplug the lead connectors to Power Relay B and verify continuity of the power relay B 1-2 terminals.
2. Unplug lead connectors to Primary Latch Switch and Secondary Latch Switch.
3. Test the continuity of switches at door opened and closed positions with ohm meter (low scale).
Normal continuity readings should be as follows.

|  | Door Opened | Door Closed |
| :--- | :---: | :---: |
| Primary Latch Switch | $\infty \Omega$ (open) | $0 \Omega$ (close) |
| Secondary Latch Switch | $\infty \Omega$ (open) | $0 \Omega$ (close) |
| Power Relay B | $\infty \Omega$ (open) | $\infty \Omega$ (close) |

### 7.2 Short Switch \& Monitor Circuit NEW H.V.

1. Unplug lead wires from H.V. Inverter primary terminals.
2. Connect test probes of ohm meter to the disconnected leads which were connected to H.V. Inverter.
3. Test the continuity of short switch with door opened and closed positions using lowest scale of the ohm meter.
Normal continuity readings should be as follows.

| Door Opened | Door Closed |
| :---: | :---: |
| $0 \Omega$ | $\infty \Omega$ |

### 7.3 Magnetron

Continuity checks can only indicate an open filament or a shorted magnetron. To diagnose for an open filament or shorted magnetron.

1. Isolate magnetron from the circuit by disconnecting the leads
2. A continuity check across magnetron filament terminals should indicate one ohm or less.
3. A continuity check between each filament terminal and magnetron case should read open.

### 7.4 Push button key board

Check continuity between switch terminals, by tapping an appropriate pad on the key board. The contacts assignment of the respective pads on the key board is as shown in digital programmer circuit (schematic).

### 7.5 Inverter Power Supply (U)

DO NOT try to REPAIR this H.V. Inverter power supply(U). Replace as whole H.V. Inverter(U) Unit.

### 7.6 Inverter Power supply(U) NEW H.V.

## WARNING

Do not attempt to make any measurements in the high voltage circuitry of the inverter or magnetron.

See Troubleshooting of inverter circuit and magnetron on Pages 19 and 20 to determine if the inverter power supply is functioning.

### 7.7 Steam Sensor and digital programmer circuit

## CAUTION

Do not touch any parts of the cicuitry on the digital programmer circuit since static electric discharge may damage this control panel.
Always ground yourself while working on this panel to discharge any static builtt up on your body.

In order to determine if the steam sensor programme of the digital programmer circuit is in working order or not, do the fllowing test.

1. Place a water load (150cc) in the oven.
2. Set Auto Sensor Program 5 Fresh Fish.
3. Tap Start pad.
4. Steam Sensor detects steam about 1 minute 30 seconds to 4 minutes after the Start pad is tapped.
5. T1 time cooking automatically switches to remaining time cooking. (T2)
6. The remaining cooking time (T2) appears in the display window. If the following cooking times appear Steam Sensor function is normal.

| T1 TIME | T2 TIME <br> (Remaining cooking time) |
| :---: | :---: |
| 1 Min. 30 Sec. $\sim 4$ Min. | 8 Sec. $\sim 23$ Sec. |

## 8. MEASUREMENTS AND ADJUSTMENTS

## WARNING

- For continued protection against radiation hazard, replace only with identical replacement parts.
- When the 10 Amp. fuse is blown due to the operation of short switch, you must replace Primary latch switch and short switch. Then follow the installation procedures below.
- Interlock switch replacement - In replacing faulty switches, be sure mounting tabs are not bent, broken or otherwise deficient in their ability to hold the switches.
- Refer to schematic diagram to ensure proper connection.

### 8.1 Installation of Primary latch switch, Secondary latch switch and Short switch.

1. When mounting Primary latch switch, Secondary latch switch and short switch to door hook assembly, mount the Primary latch switch, the Secondary latch switch and the short switch to the door hook assembly as shown in the illustration.
NOTE: No specific adjustment during installation of Primary latch switch, Secondary latch switch and short switch to the door hook is necessary.
2. When mounting the door hook assembly to the oven assembly, adjust the door hook assembly by moving it in the direction of arrow in the illustration so that the oven door will not have any play in it. Check for play in the door by pulling the door assembly. Make sure that the latch keys move smoothly after adjustment is completed. Completely tighten the screws holding the door hook assembly to the oven assembly.
3. Reconnect the short switch, primary \& secondary latch switches and check the continuity of the monitor circuit and all latch switches again by following the components test procedures.

### 8.2 Measurement of microwave output

The output power of the magnetron can be determined by performing IEC standard test procedures. However, due to the complexity of IEC test procedures, it is recommended to test the magnetron using the simple method outlined below.
Necessary Equipment:
*1 litre beaker
*Glass thermometer
*Wrist watch or stopwatch.
NOTE: Check the line voltage under load. Low voltage will lower the magnetron output. Take the temperature readings and heating time as accurate as possible.

1. Fill the beaker with exactly one litre of tap water. Stir the water using the thermometer and record the beaker's temperature (recorded as T1).
2. Place the beaker on the center of glass cook plate.
3. Set to high power and heat for exactly one minute.
4. Stir the water again and read the temperature of the beaker (recorded as T2).
5. The normal temperature rise at High power position for each model is as shown in table.

Please confirm that the gap between the switch housing and switch actuator levers is no more than 0.7 mm when the door is closed.

TABLE (1 l-1min. test)

| RATED OUTPUT | TEMPERATURE RISE |
| :---: | :---: |
| 1000 W (IEC705-88) | $\left(8^{\circ} \mathrm{C}\right)$ |

## 9. TROUBLESHOOTING GUIDE

## NEW H.V.

## CAUTION

1. DO NOT try to REPAIR this H.V. Inverter power supply(U). Replace as whole H.V. Inverter(U) Unit. When returning H.V. Inverter(U) make sure to pack as originally packed.
2. DO NOT RE-ADJUST PRESET VOLUME on the H.V. Inverter(U). It is very dangerous to repair or adjust without sufficient test equipment because this circuit handles very large current with very high voltage.
3. Ensure proper grounding before checking for trouble.
4. Be careful of the high voltage circuitry, taking necessary precautions when troubleshooting.
5. Discharge the high voltage that remains in the Inverter(U).
6. When checking the continuity of the switches or the H.V. Inverter, disconnect one lead wire from these parts and then check continuity with the AC plug removed. To do otherwise may result in a false reading or damage to your meter. When disconnecting a plastic connector from a terminal, you must hold the plastic connector instead of the lead wire and then disconnect it, otherwise lead wire may be open or the connector cannot be removed.
7. Do not touch any parts of the circuitry on the digital programmer circuit, since static electric discharge may damage this control panel.
Ensure you are touching the ground while working on this panel to discharge any static charge in your body.
8. 240 VAC is present on the digital programmer circuit (Terminals of power relay's and primary circuit of low voltage transformer). When troubleshooting, be cautious of possible electrical shock hazard.

Before troubleshooting, operate the microwave oven following the correct operating procedures in the instruction manual in
order to find the exact cause of any trouble, since operator error may be mistaken for the oven's malfunction.

|  | SYMPTOMS | CAUSE | CORRECTIONS |
| :---: | :---: | :---: | :---: |
| 1. | Oven is dead. <br> Fuse is OK. <br> No display and no operation at all. | 1. Open or loose lead wire harness. <br> 2. Open low voltage transformer <br> 3. Defective DPC AU or DPC DU |  |
| 2. | No display and no operation at all. Fuse is blown. | 1. Shorted lead wire harness <br> 2. Defective primary latch switch (NOTE 1) <br> 3. Defective short switch (NOTE 1) <br> 4. Defective Inverter power supply <br> (U) NEW H.V. <br> Refer to component test procedure (Page 17) | Check adjustment of primary, secondary latch switch and short switch including door. |
|  |  | NOTE 1: All of these switches must be replaced at the same time. <br> (Refer to adjustment instructions.) <br> Check continuity of power relay B's contacts (between 1 and 2) and if it has continuity, replace power relay B also. |  |
| 3. | Oven does not accept key input (Program). | 1. Key input is not in sequence. <br> 2. Shorted push button on DPC AU. <br> 3. Defective DPC AU. | Refer to operation procedure. <br> Refer to DPC troubleshooting. |
| 4. | Oven lamp and turntable motor turn on when oven is plugged in with door closed | 1. Misadjustment or loose wiring of secondary latch switch. <br> 2. Defective secondary latch switch | Adjust door and latch switches. |
| 5. | Timer starts countdown but no microwave oscillation. <br> (No heat while oven lamp and fan motor turn on) | 1. Off-alignment of latch switches <br> 2. Open or loose connection of high voltage circuit especially magnetron filament circuit <br> NOTE: Large contact resistance will bring lower magnetron filament voltage and cause magnetron to have lower output and/or be intermittent. <br> 3. Defective high voltage component <br> H.V. Inverter NEW H.V. Magnetron <br> 4. Open or loose wiring of power relay B <br> 5. Defective primary latch switch. <br> 6. Defective power relay B or DPC AU or DU. | Adjust door and latch switches. <br> Check high voltage component according to component test procedure (Page 17) and replace if it is defective. <br> Refer to DPC troubleshooting. |
| 6 | Microwave output is low. Oven takes longer time to cook food. | 1. Decrease in power source voltage <br> 2. Open or loose wiring of magnetron filament circuit. (Intermittent oscillation) <br> 3. Aging change of magnetron. | Consult electrician <br> Refer to output test procedures by water temperature raising test. |
| 7 | Turntable on when door is opened. | 1. Shorted primary latch switch. |  |
| 8 | Loud buzzing noise can be heard. | 1. Loose fan and fan motor |  |

|  | SYMPTOMS | CAUSE | CORRECTIONS |
| :--- | :--- | :--- | :--- |
| 9 | Turntable motor does not rotate. | 1. Open or loose wiring of turntable motor <br> 2. Defective turntable motor |  |
| 10 | Oven stops operation during cooking. | 1. Open or loose wiring of primary and <br> secondary latch switch | Adjust door and latch switches. |
| 11 | Oven returns to plug in mode 9 secs. after pad is <br> pressed in sensor mode. | 1. Open steam sensor <br> 2. Defective steam sensor | NN-V689WB |

## Troubleshooting of Inverter Circuit (U) and Magnetron NEW H.V.

## Oven shuts down after approximately 15 or 33 seconds.

If the microwave oven shuts down after a short time in micropower mode, conduct the following test.
The microwave oven must be set in test mode to activate the self diagnostic failure code system.
SELF TEST MODE

When oven is set in test mode place water load in oven, set micropower to high and time to 1 minute, press start.
H97, H98 appears in display window a short time after start key is pressed and there is no microwave oscillation.

NOTE: DO NOT try to REPAIR this Inverter Power Supply(U) and also DO NOT RE-ADJUST PRESET VOLUME on the board. It is very dangerous to repair or adjust without sufficient test equipment because this circuit handles very high voltage and very large current. Off alignment of inverter board operation is dangerous. Operating a misaligned Inverter circuit is dangerous due to the very high voltage and current that is produced by this board. Defective boards must be replaced with a new one.

Approx AC 3V unplug CN701 and measure at lead wire harness side.

```
H.V. Inverter (U) NOTE:
```

*Check magnetron filament for open or short to casing before proceeding to determine a good magnetron.

## Alternative way to troubleshooting oven with AC Ampare meter used.

## Oven shuts down after approximately 15 or 33 seconds.

If the microwave oven shuts down after a short time in micropower mode, conduct the following test.
The microwave oven must be set in test mode to activate the self diagnostic failure code system.
SELF TEST MODE

When oven is set in test mode place water load in oven, set micropower to high and time to 1 minute, press start.
H97, H98 appears in display window a short time after start key is pressed and no microwave oscillation with AC Ampare meter used for troubleshooting.

## Trouble Related to Digital Programmer Circuit

| SYMPTOM | STEP | CHECK | RESULT | CAUSE/CORRECTIONS |
| :---: | :---: | :---: | :---: | :---: |
| No display when oven is first plugged in. | 1 | Fuse pattern of DPC | Normal | STEP 2 |
|  |  |  | Open (NOTE) | Shorted Circuit of ZNR, L.V.T., Oven Lamp etc. Replace DPC |
| Oven is dead. | 2 | IC10 Pin 9 (12V line) | Abnormal 0V | IC10 |
|  |  |  | Normal 12V | $\rightarrow$ Step 3 |
|  | 3 | IC-1 Pin 16 voltage (Emitter of Q10) | Abnormal | ZD10, Q10, Ribbon Cable |
|  |  |  | Normal $=5 \mathrm{~V}$ | $\rightarrow$ Step 4 |
|  | 4 | IC-1 pin 10 voltage (15 pin of IC220) | Abnormal | IC-220 |
|  |  |  | Normal | $\rightarrow$ IC-1, CX1 |

Procedure of fuse pattern repairing is as follows:

1. When the fuse pattern (PF2) opens
(1) Remove the jumper wire (PF3).
(2) Insert the removed jumper wire (PF3) to "(PF2)" position and solder it. If both "PF2" and "PF3" fuse patterns are open, please replace DPC

NOTE: * At the time of these repairs, make visual inspection of the varistor for burning damage and examine the transformer with tester for the presence of layer short-circuit (check primary coil resistance).
If any abnormal condition is detected, replace the defective parts.

| SYMPTOM | STEP | CHECK | RESULT | CAUSE/CORRECTIONS |
| :--- | :--- | :--- | :--- | :--- | :--- |
| No key input | 1 | Push button switch | Push button switch |  |
| No beep sound |  |  | Abnormal | IC-1 |

[^1]:    WARNING OF INVERTER POWER SUPPLY(U) GROUNDING
    Check the High Voltage Inverter Power Supply circuit grounding. This High Voltage Inverter Power Supply circuit board must have a proper chassis ground by the grounding bracket to the chassis ground; otherwise, this H.V. Inverter circuit board will expose very high voltage and cause extreme DANGER! Be sure to have proper grounding by the grounding plate and screws.
