and Latin America)

⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

When you note the serial number, write down all of the 11 digits. The serial number may be found on the unit.

IMPORTANT INFORMATION ABOUT LEAD FREE, (PbF), SOLDERING

If lead free solder was used in the manufacture of this product the printed circuit boards will be marked PbF.

Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark.

When this mark does appear, please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

1 ABOUT LEAD FREE SOLDER (PbF: Pb free)

Note:

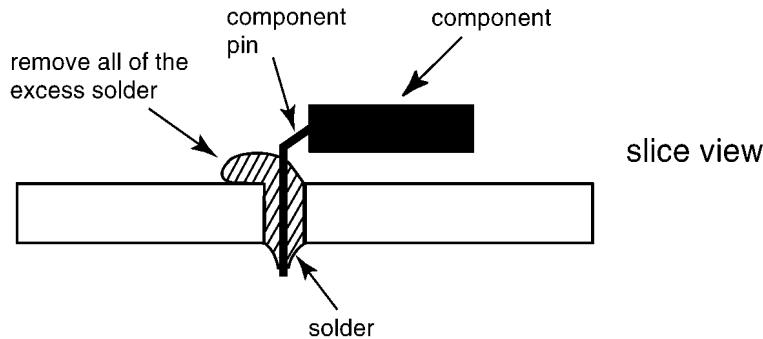

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

We will use PbF solder when discussing the lead free solder used in our manufacturing process which is made from Tin, (Sn), Silver, (Ag), and Copper, (Cu).

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder.

Caution

- PbF solder has a melting point that is 50° ~ 70° F, (30° ~ 40°C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to 700° ± 20° F, (370° ± 10°C).
- Exercise care while using higher temperature soldering irons.:
Do not heat the PCB for too long time in order to prevent solder splash or damage to the PCB.
- PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100°F, (600°C).
- When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See figure, below).

1.1. SUGGESTED PbF SOLDER

There are several types of PbF solder available commercially. While this product is manufactured using Tin, Silver, and Copper, (Sn+Ag+Cu), you can also use Tin and Copper, (Sn+Cu), or Tin, Zinc, and Bismuth, (Sn+Zn+Bi).

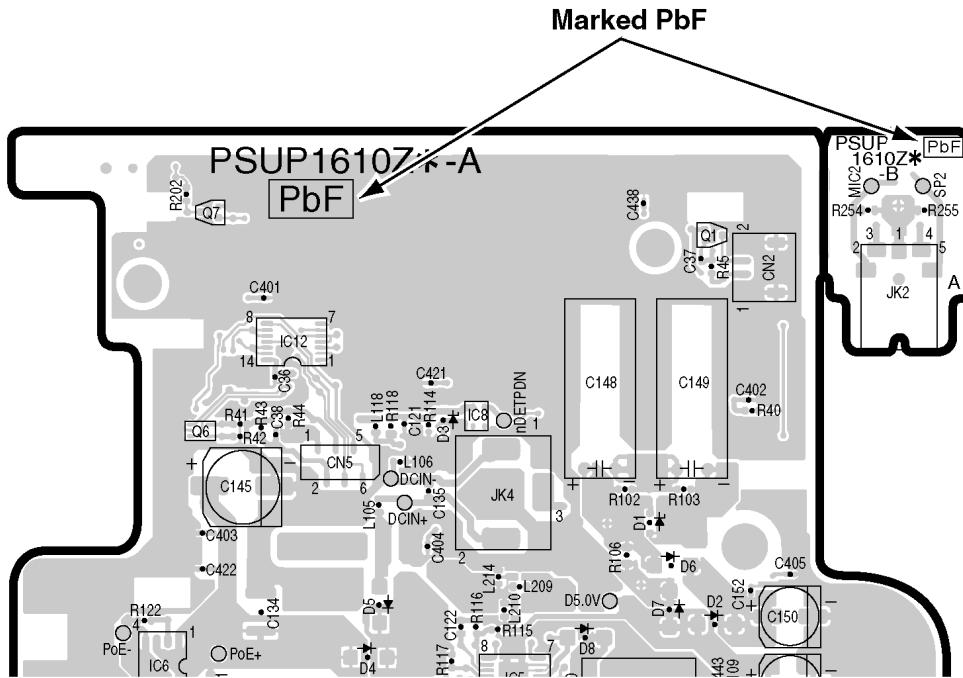

Please check the manufacturer's specific instructions for the melting points of their products and any precautions for using their product with other materials.

The following lead free (PbF) solder wire gauges are recommended for service of this product: 0.3mm, 0.6mm and 1.0mm.

0.3mm X 100g	0.6mm X 100g	1.0mm X 100g

1.2. HOW TO RECOGNIZE THAT Pb FREE SOLDER IS USED

“PbF” is marked to show that Pb free solder is used. (See the figure below.)

2 FOR SERVICE TECHNICIANS

ICs and LSIs are vulnerable to static electricity.

When repairing, the following precautions will help prevent recurring malfunctions.

1. Cover the plastic parts boxes with aluminum foil.
 2. Ground the soldering irons.
 3. Use a conductive mat on the worktable.
 4. Do not touch IC or LSI pins with bare fingers.

3 SPECIFICATIONS

Rated Specification of the Equipment

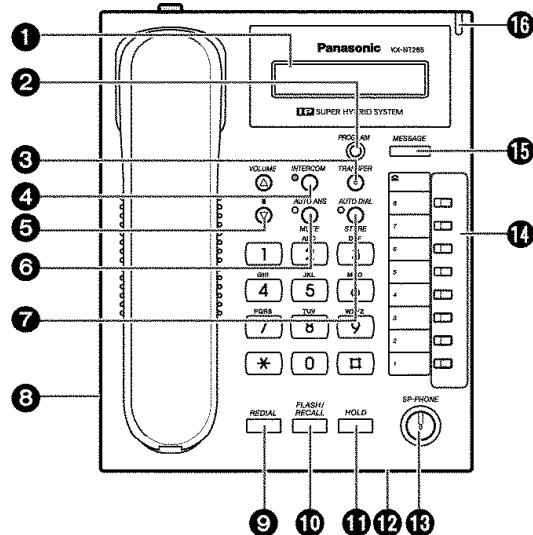

Item	Outline Specification	Remarks
VoIP Protocol	Proprietary extension (MGCP)	
Audio CODEC	G.711 64kbps, G.729A 8kbps	
Volume	Handset vol.: (4 levels Electric vol.) Headset vol.: (4 levels Electric vol.) Speaker vol.: (12 levels Electric vol.) Ringer vol.: (4 levels Electric vol. + Off position)	
Voice Function	Hands - free Call , Off - hook monitor	OHCA is not supported on the specification.
Ethernet Interface	Ethernet port : 10/100Base-TX(RJ45)	The PC port is not supported on the specification.
QoS	IEEE802.1p supported (Priority Q : 2stages)	Not supported on the specification.
Network Protocol	TCP/IP, UDP etc.	
LCD Display	16 characters × 1line	
Power Supply	Power-over-Ethernet (Compliant with IEEE802.3af) Optional AC Adaptor 9V	
Power Consumption	4W at maximum	
Operating Temperature	0°C - 40°C	
Dimensions	Low Angle: 215(D)mm [Operate] ×180(W)mm × 100(H)mm High Angle: 200(D)mm [Operate] ×180(W)mm × 120(H)mm	
Weight	0.78kg	

List of Hardware Configuration

Item	Specification
VoIP	Sanyo LC82162B 216pins LQFP CPU+DSP+MAC+CODEC 51.2MHz operation System bus width : 32bit Internal Memory for DSP SRAM : 4kbyte
Memory	System Memory Flash : 2Mbyte SDRAM : 8Mbyte
Ethernet Interface	Ethernet port : (10/100Base-TX) Micrel KS8721BL is used.
KEY and LED	Number key : 12, Abbreviation : 8, Function key : 13 CO key LED : 2 colors, 8pcs; Function key LED : 5pcs
Power Supply	Input : AC adaptor DC9V/500mA or Power-over-Ethernet DC48V (Compliant with IEEE802.3af) DCDC power supply : Input +9V or 48V (Power-Over-Ethernet) Output +3.3V, +1.8V

Design and specifications are subject to change without notice.

4 LOCATION OF CONTROLS

- ① LCD (Liquid Crystal Display)**
- ② PROGRAM:** Used to enter and exit the personal programming mode.
- ③ TRANSFER:** Used to transfer a call to another party.
- ④ INTERCOM:** Used to make or receive intercom calls.
- ⑤ VOLUME Control Button:** Used to adjust the volume.
- ⑥ AUTO ANS (Auto Answer)/MUTE:** Used to receive an incoming call in hands-free mode or mute the microphone/handset during a conversation.

- ⑦ AUTO DIAL/STORE:** Used for System/Personal Speed Dialling or storing programme changes.
- ⑧ Headset Jack**
- ⑨ REDIAL:** Used to redial the last dialled number.
- ⑩ FLASH/RECALL:** Used to disconnect the current call and make another call without hanging up.
- ⑪ HOLD:** Used to place a call on hold.
- ⑫ Microphone:** Used for the hands-free conversation.
- ⑬ SP-PHONE (Speakerphone):** Used for the hands-free operation.
- ⑭ Flexible Outside (CO) Line Buttons:** Used to make or receive an outside call. Pressing this button seizes an idle outside line automatically. (Button assignment is required.)
Also used as feature buttons. (Button assignment is required.)
- ⑮ MESSAGE:** Used to leave a message waiting indication or call back the party who left the message waiting indication.
- ⑯ Message/Ringer Lamp:** When you receive a call, the lamp flashes red. When someone has left you a message, the lamp stays on red.

◆ Setting

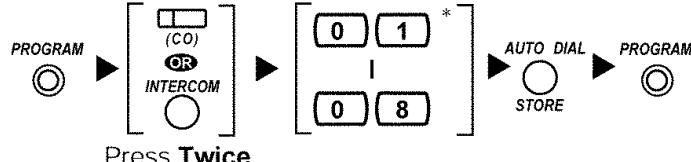

◆ Ringer volume

While on-hook or receiving a call

Press UP or DOWN.

◆ Ring Tone

* The ring tone pattern of patterns 09 to 30 is the same as pattern 01.

◆ LCD Contrast/Headset Mode

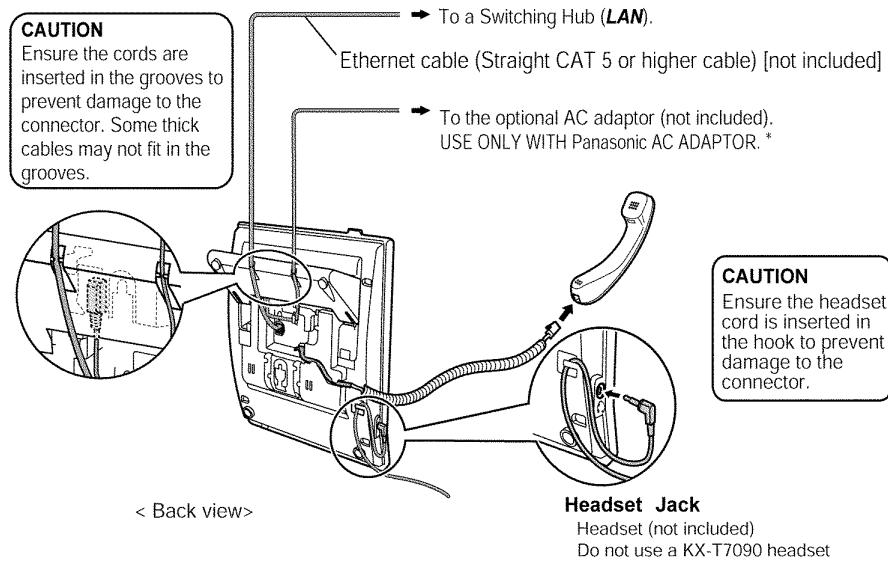

While on-hook

Note:

For further information, refer to the User Manual of the Hybrid IP-PBX.

5 CONNECTION

CAUTION:

- The AC adaptor is used as the main disconnect device. Ensure that the AC outlet is located near the unit and is easily accessible.

Notes:

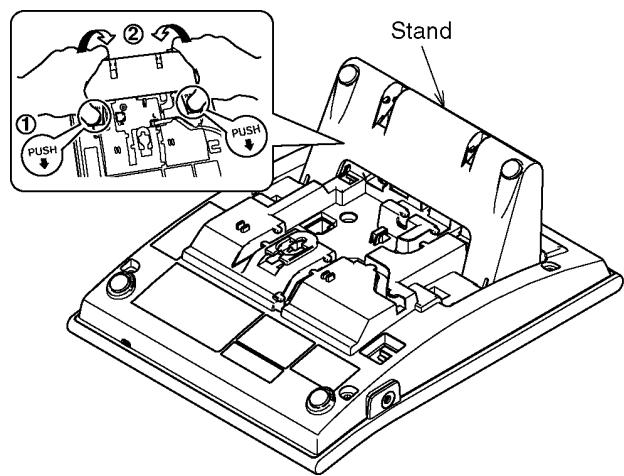

- Consult your dealer for more details about the AC adaptor.

5.1. OPTIONAL ACCESORY

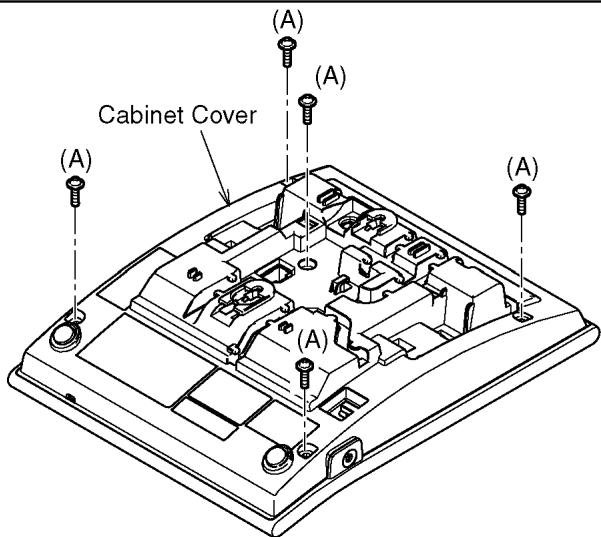

Model No.	Description
KX-A237X	AC adaptor (PQLV1) for Canada and other 100V areas
KX-A237BX	AC adaptor (PQLV1CE) for Russia, Eastern Europe and other 200V areas
KX-A237EJ	AC adaptor (PQLV1E) for Hong Kong, Singapore and Malaysia
KX-A237AL	AC adaptor (PQLV1AL) for Oceania
KX-A237AG	AC adaptor (PQLV1AG) for Argentina
KX-A237BR	AC adaptor (PQLV1LB) for Brazil

6 DISASSEMBLY INSTRUCTIONS

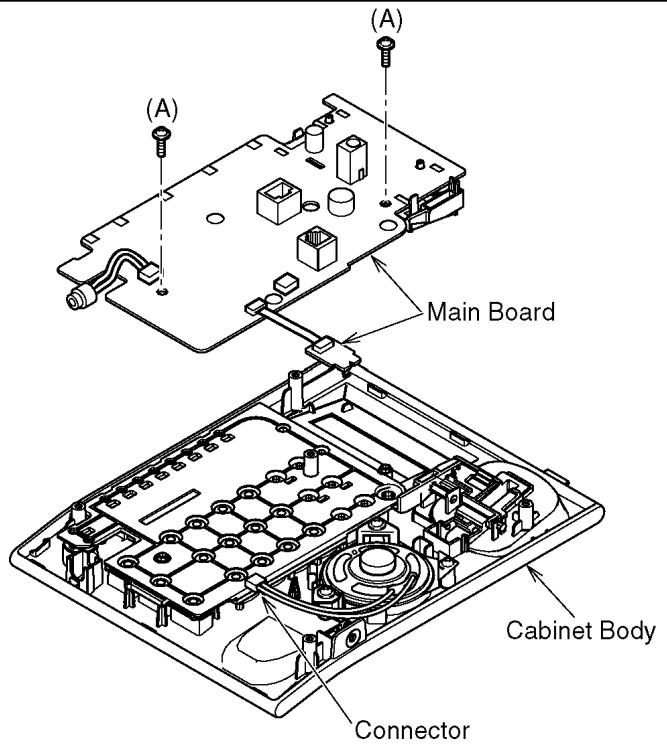

1. Remove the Stand.

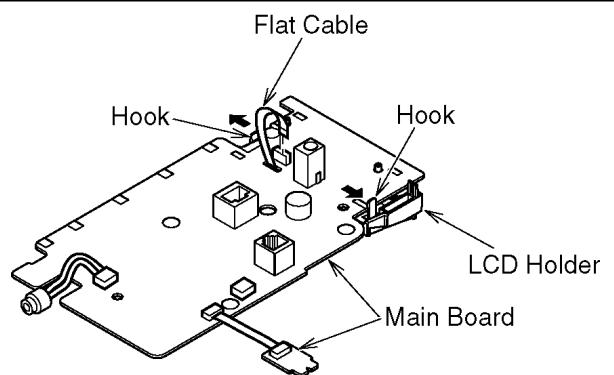

2. Remove 5 Screws.
3. Remove the Cabinet Cover.

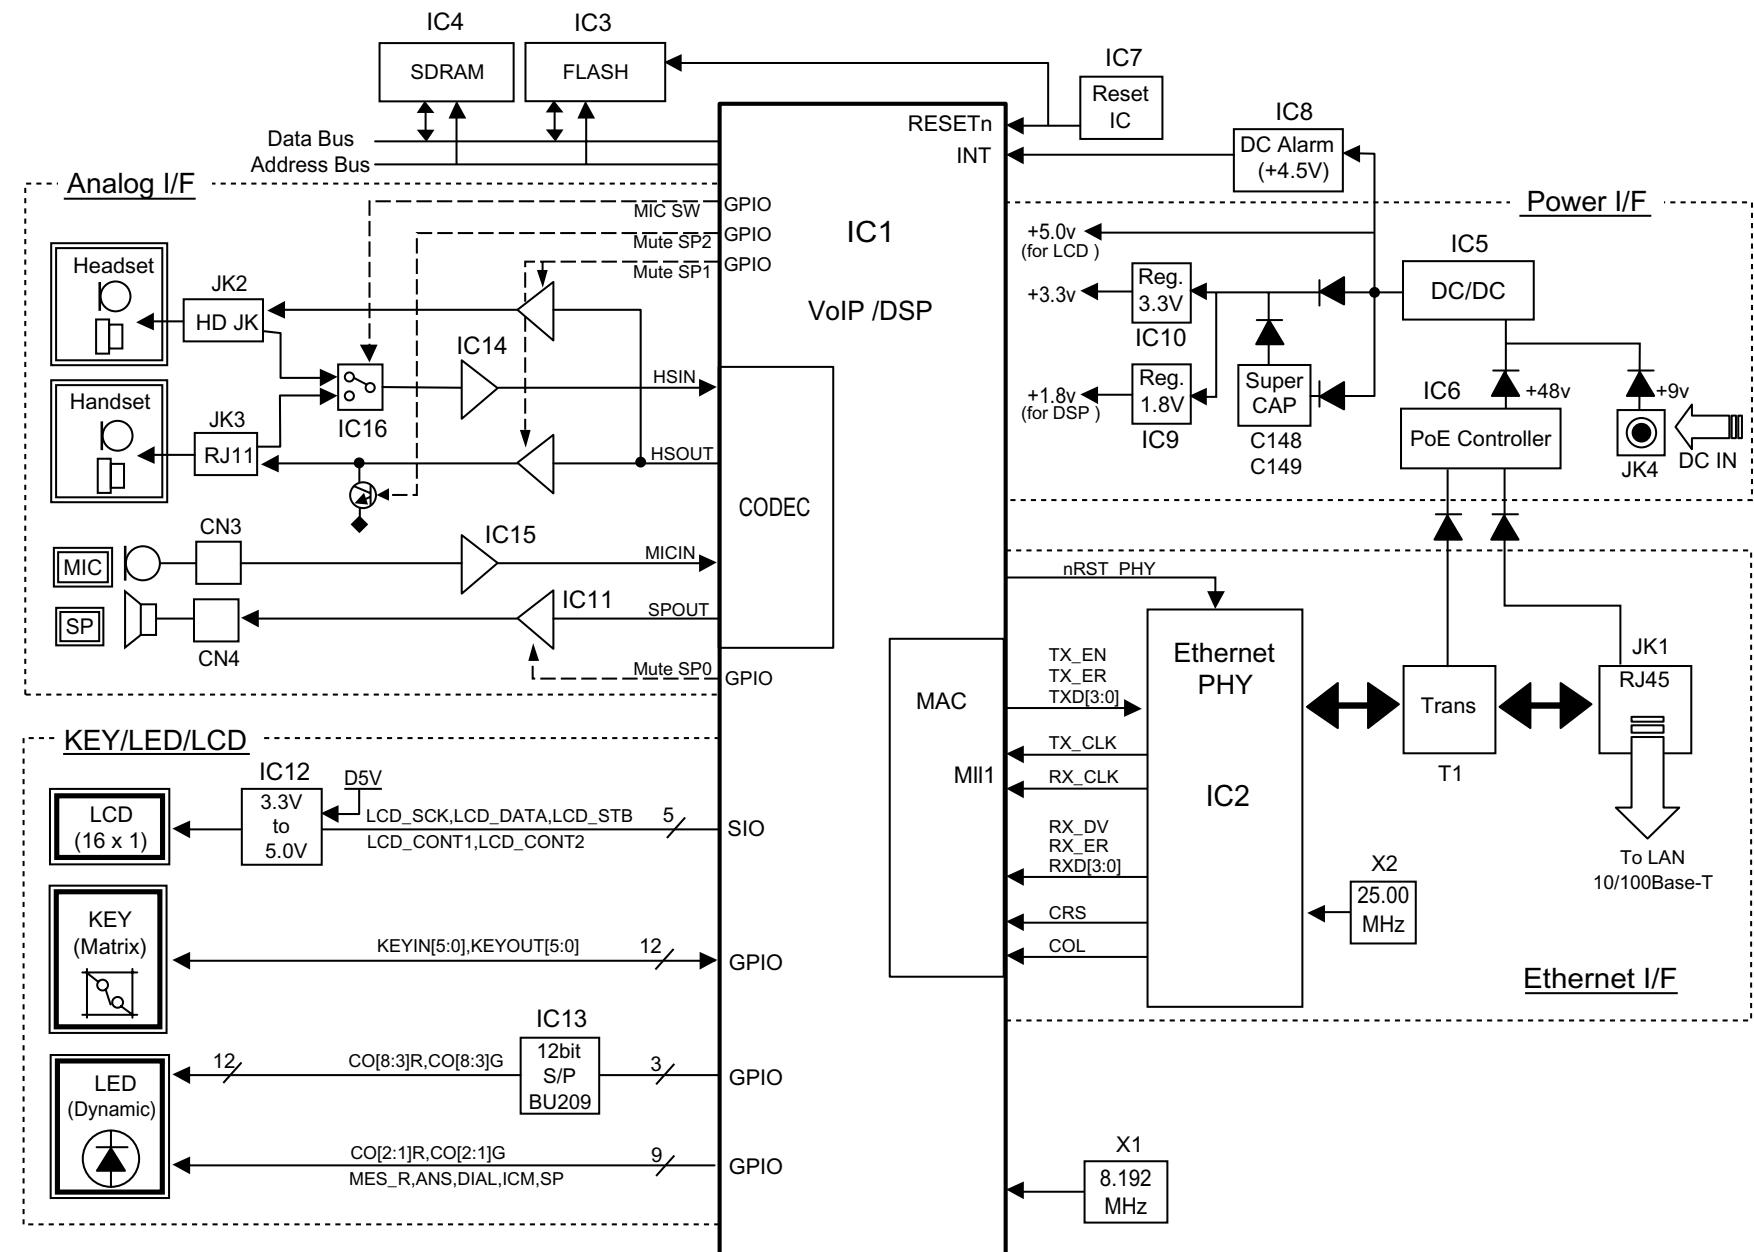

4. Remove the Connector from the Main Board.
5. Remove 2 Screws (A).
6. Remove the Main Board and the LCD from the Cabinet Body.

7. Remove the Flat Cable from the Main Board.
8. Remove the LCD Holder by sliding the Hook in the direction of the arrow from the Main Board.

7 BLOCK DIAGRAM

KX-NT265X/KX-NT265X-B : BLOCK DIAGRAM

8 CIRCUIT OPERATIONS

8.1. VoIP BLOCK

The DSP, MAC, CODEC and the CPU are built into the VoIP (IC1).

The FLASH (IC3) and the SDRAM (IC4) are connected to the CPU. The contents of the FLASH are expanded to the SDRAM at start-up. It also stores each setting.

If the LCD is not displayed in the operation but there is no problem on the LCD, then the failure of the CPU system memory (IC3 and IC4) should be considered, too.

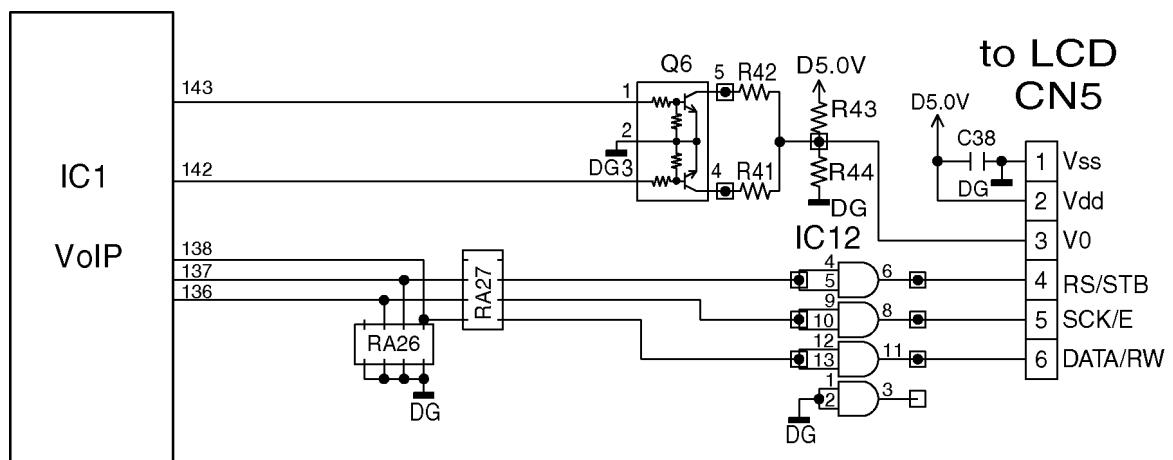

8.2. LCD CIRCUIT

LCD data are outputted from pin138 of IC1 to LCD module.

IC12 is a converter circuit which outputs the voltage (+5V) necessary for LCD driving.

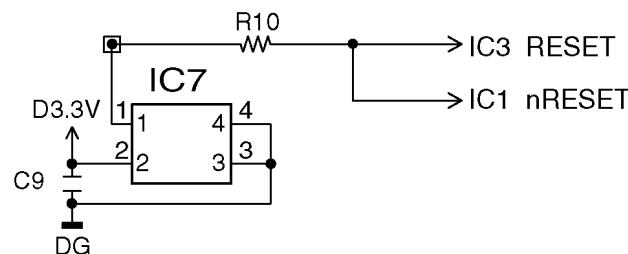

LCD contrast is set by electronic volume in the LCD module.

KX-NT265 uses a 16 characters x 1 line LCD.

8.3. RESET CIRCUIT

Reset signal is outputted from IC7 and inputted into IC1 and IC3.

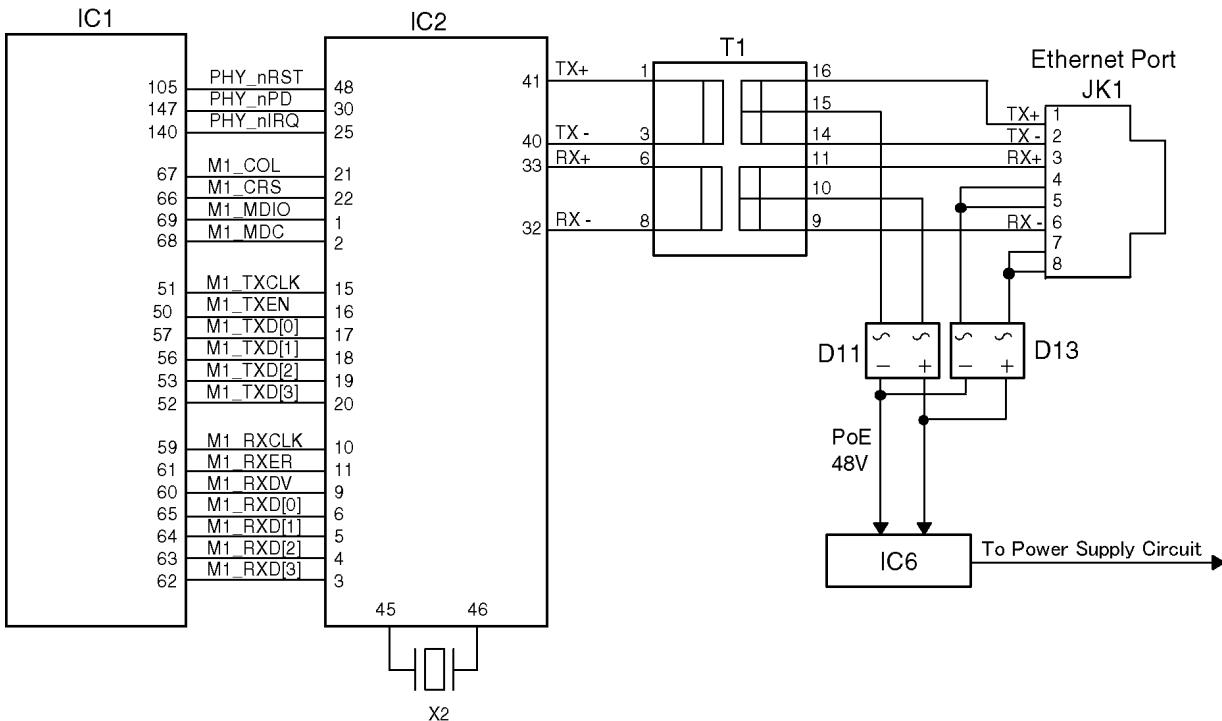

8.4. Ethernet CIRCUIT

The Ethernet IC (IC2) is used for the Ethernet interface.

It is connected from IC2 to the Ethernet port (JK1) through a transformer and so is isolated.

Also, Ethernet port (JK1) gets power from the Ethernet line for PoE (Power-over-Ethernet) as shown below.

It is connected between IC2 and the VoIP (IC1) by high-speed bus called MII (Management Independent Interface) bus operating with 25MHz.

8.5. POWER SUPPLY CIRCUIT

This Power Supply Circuit supports the power supply through an Ethernet line called PoE (Power-over-Ethernet) as well as the input from a regular AC adaptor. It converts the power supply from the both to 5.0V and is supplied to a 3.3V and 1.8V regulator on the MAIN board.

The power supply board consists of the four sections below.

1. IEEE802.3af Authentication Circuit

When the hub or router supporting IEEE802.3af is connected to Ethernet port (JK1), the authentication voltage and the classification voltage are supplied between Pin 1,2 and 3,6 or Pin 4,5 and 7,8 of JK1.

When this voltage is detected automatically by IC6, it applies the corresponding current and is identified on the hub side, so that the hub starts to supply 48V.

In that case, as there is OR with the power from Ethernet port (JK1) and the power from DC jack (JK4) by D4 and D5, the power from Ethernet port is supplied to the switching regulator (IC5) preferentially.

2. Switching Regulator Circuit

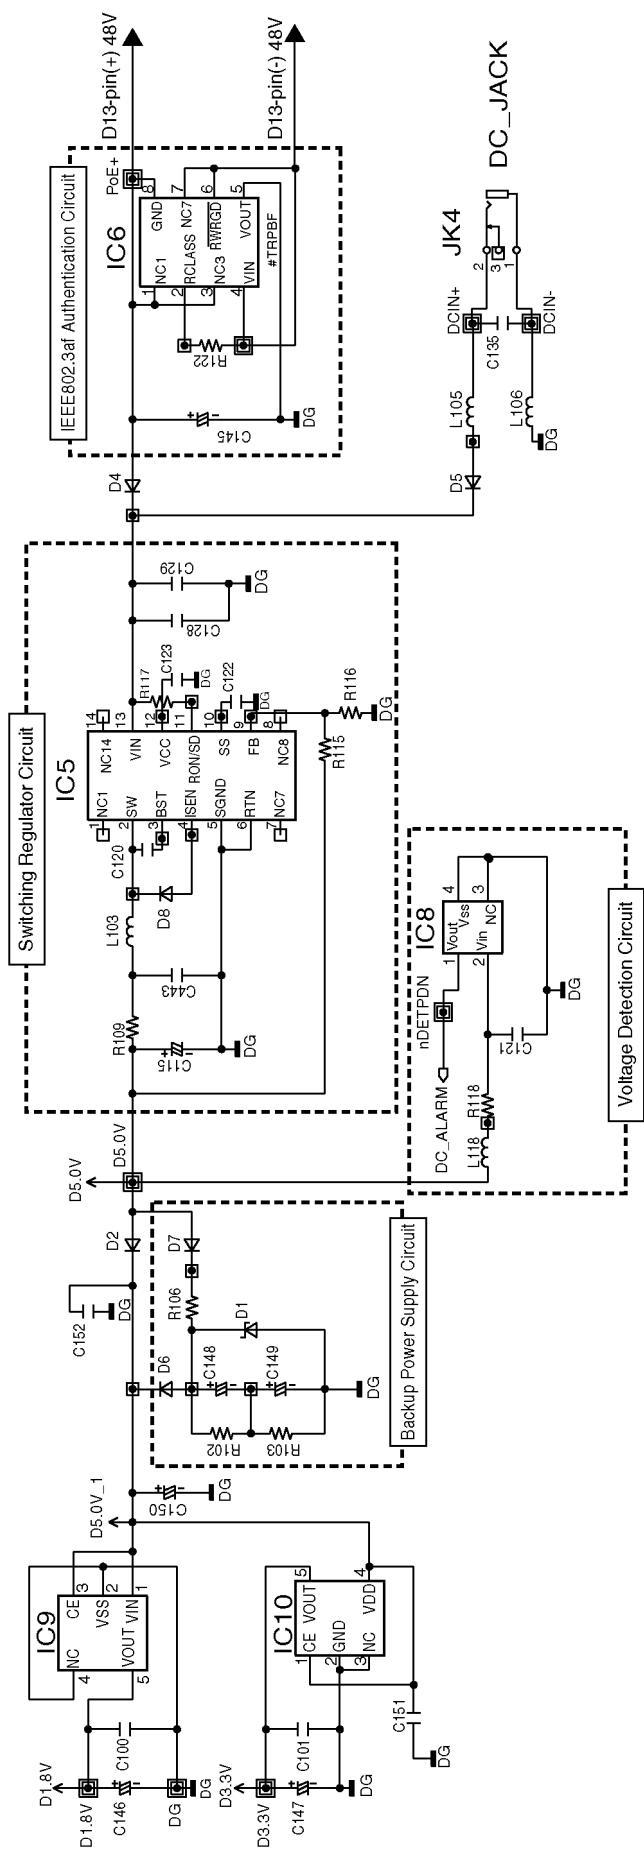

This switches the power from the DC jack or Ethernet port by IC5 to generate 5.0V. The switching frequency is 380kHz.

3. Backup Power Supply Circuit

C148 and C149 are super capacitors and performs backup during a temporary blackout. Usually, the power is stored through D7 to C148 and C149. It is generally 4.7V and clipped by the Zener diode of D1.

4. Voltage Detection Circuit

If the voltage supplied to the Switching Regulator Circuit goes under 4.5V, pin1 of IC8 goes 0V and informs the decreased voltage for VoIP (IC1).

8.6. ANALOG CIRCUIT

This circuit performs the setting of the call path/vol. adjustment in each call mode by a built-in DSP of VoIP (IC1).The audio gain of each call is determined by download data from PBX or by internal data from flash memory (IC3).

See 17.3. ANALOG/KEY/LED block

1. Handset Call

Transmitting signal is inputted from handset microphone, and amplified by IC14 and IC18 → inputted to IC1-pin112 →A/D conversion and Gain adjustment by a built-in DSP of IC1 → then sent to PBX.

Transmitting signal inputted from handset microphone is controlled by transmission switching SW IC16 as follows;

IC16-pin5 L: Handset Call

(IC16-pin5 H: Headset Call)

Transmitting signal inputted from handset microphone is controlled by transmission switching SW IC16 as follows;

Receiving signal inputted from PBX → Gain adjustment by a built-in DSP of IC1 → D/A conversion and outputted from IC1-pin115. → Amplified by IC17 and IC19, and outputted to handset.

2. Headset Call

Transmitting signal is inputted from headset microphone, and amplified by IC14 and IC18 → inputted to IC1-pin112 →A/D conversion and Gain adjustment by a built-in DSP of IC1 → then sent to PBX.

Transmitting signal inputted from headset microphone is controlled by transmission switching SW IC16 as follows;

IC16-pin5 H: Headset Call

(IC16-pin5 L: Handset Call)

Receiving signal inputted from PBX → Gain adjustment by a built-in DSP of IC1 → D/A conversion and outputted from IC1-pin115. → Amplified by IC17 and IC19, and outputted to headset.

3. Speakerphone Call

Speakerphone call realizes all double-call by a built-in DSP (echo canceller) of IC1. For a call in the most appropriate condition, DSP checks voice level of the calling party, acoustics in a room, voice level of the other party and state of the line of contact, and cancels echo in transmitting and receiving at the start of calling. It operates in a half double-call state in a few seconds for the check.

Transmitting signal is inputted from microphone and amplified by IC15 → A/D conversion and Gain adjustment by a built-in DSP of IC1, then sent to PBX through echo canceller.

Receiving signal inputted from PBX → Gain adjustment by DSP through a built-in echo canceller of IC1 → D/A conversion and outputted from IC1-pin116 → Amplified by IC14 and outputted from IC11 (Amp) to speaker.

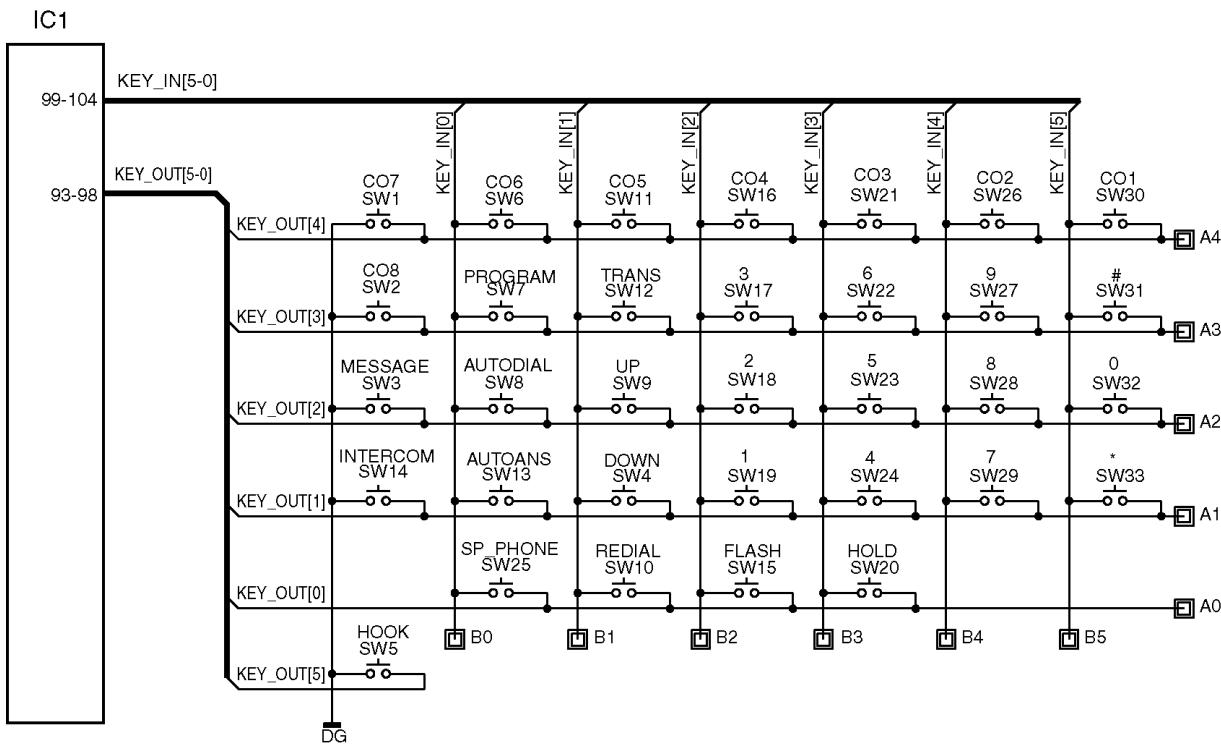

Power Amp IC11 is controlled as follows;

IC11-pin1 L → ON

IC11-pin1 H → OFF

8.7. KEY INPUT CONTROL CIRCUIT

The key data is under the matrix control by pin93 to 104 of IC1. The key information outputted from KEYOUT [5-0] is inputted into KEYIN [5-0], when the key is pressed.

8.8. LED CIRCUIT

The lighting of the LED is controlled by IC1.

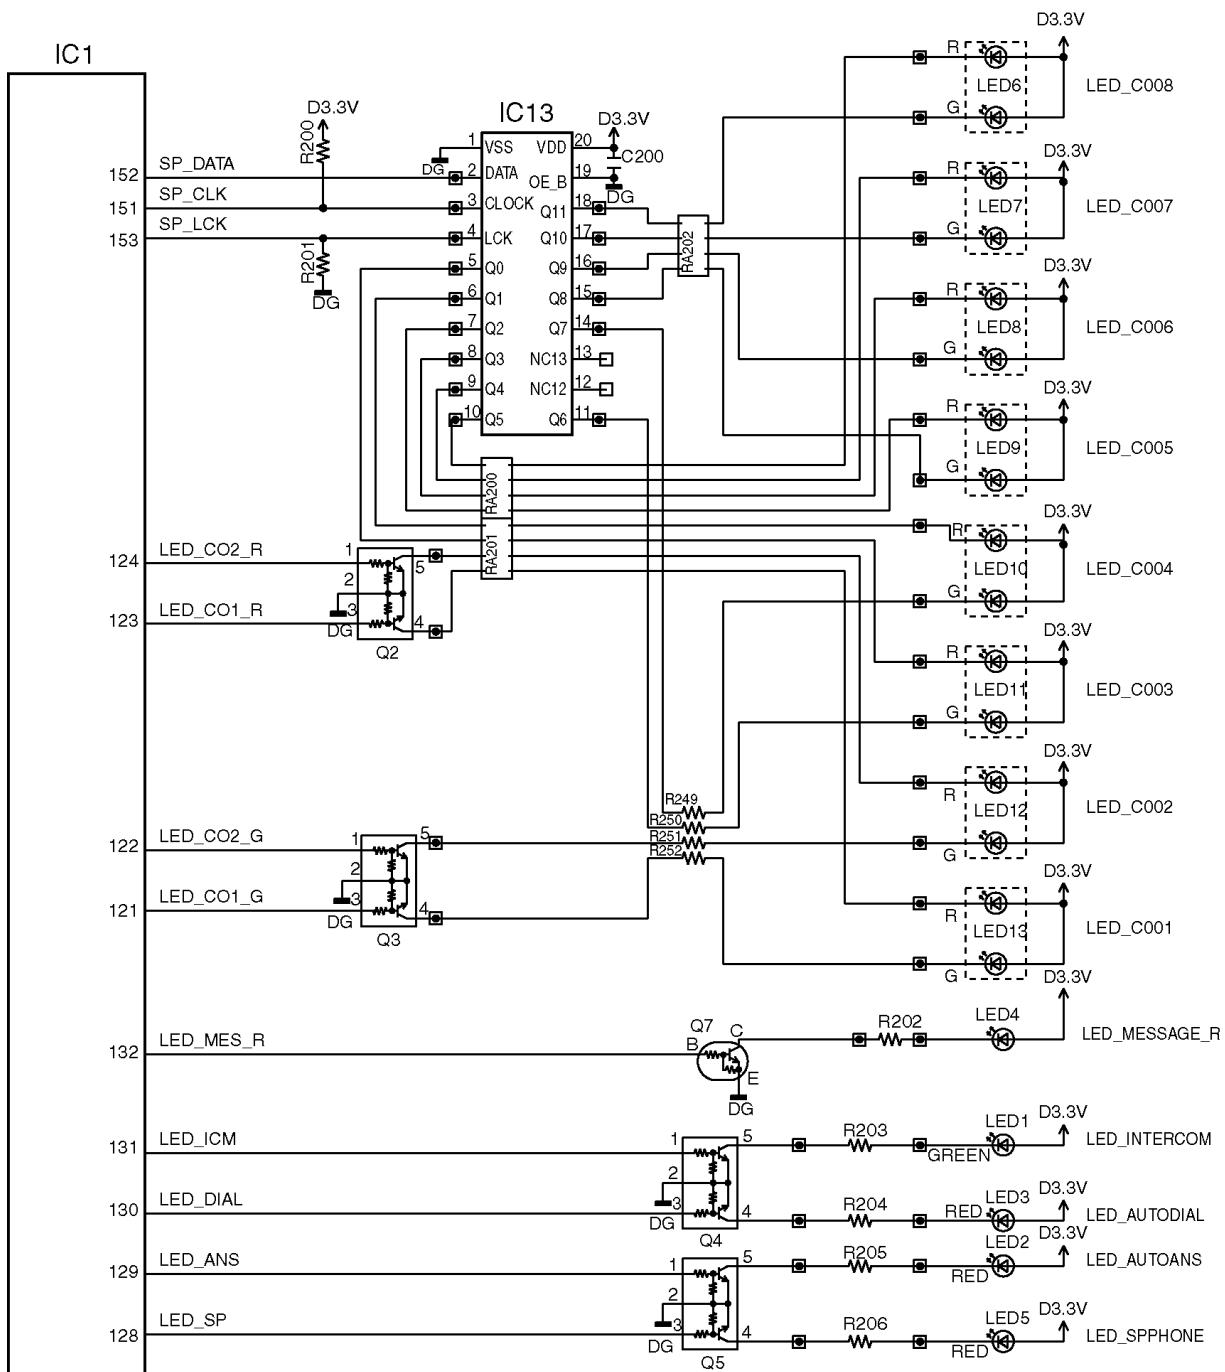

The LEDs light up in a static lighting system.

<Controlled by I/O ports of IC1>

- LED1 : INTERCOM
- LED2 : AUTOANSWER
- LED3 : AUTODIAL
- LED4 : MESSAGE
- LED5 : SP PHONE
- LED12 : CO2
- LED13 : CO1

<Controlled by serial I/F of IC13>

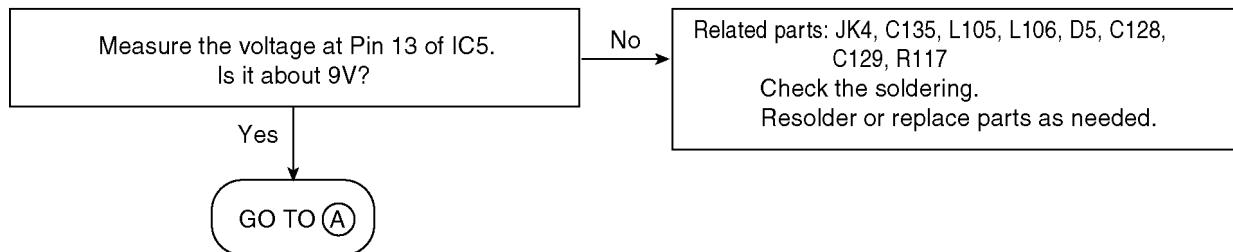

- LED[6-11] : CO[8-3]

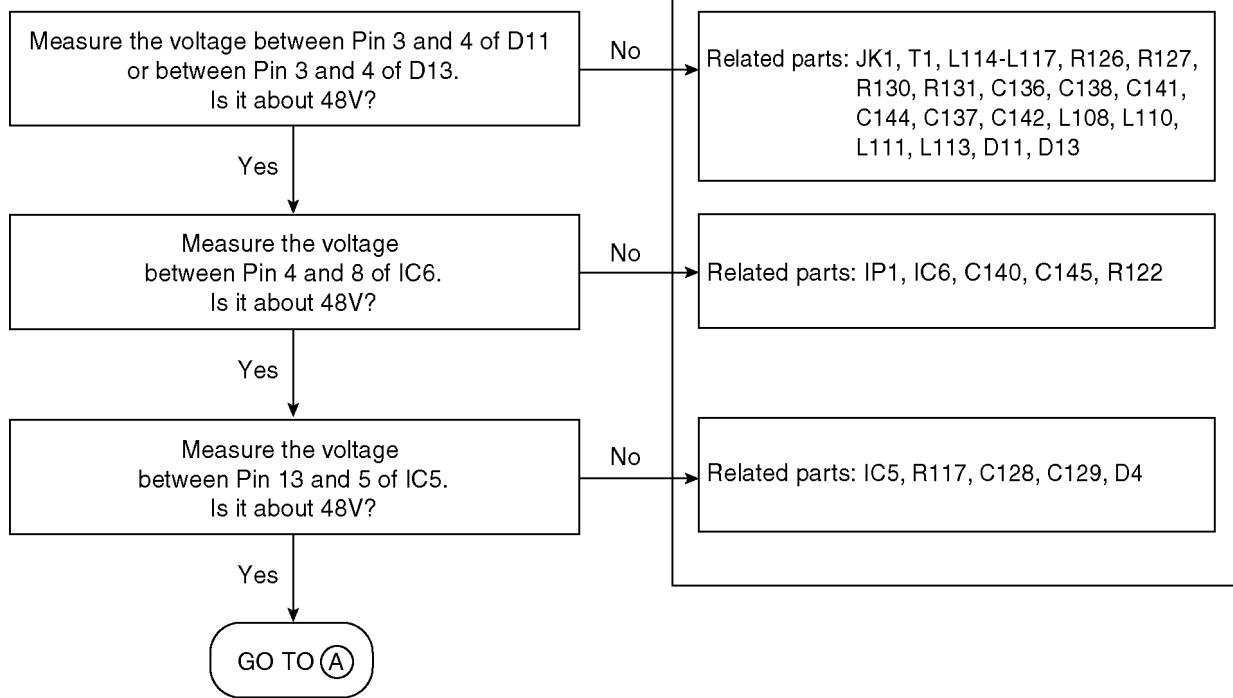

9 TROUBLESHOOTING GUIDE

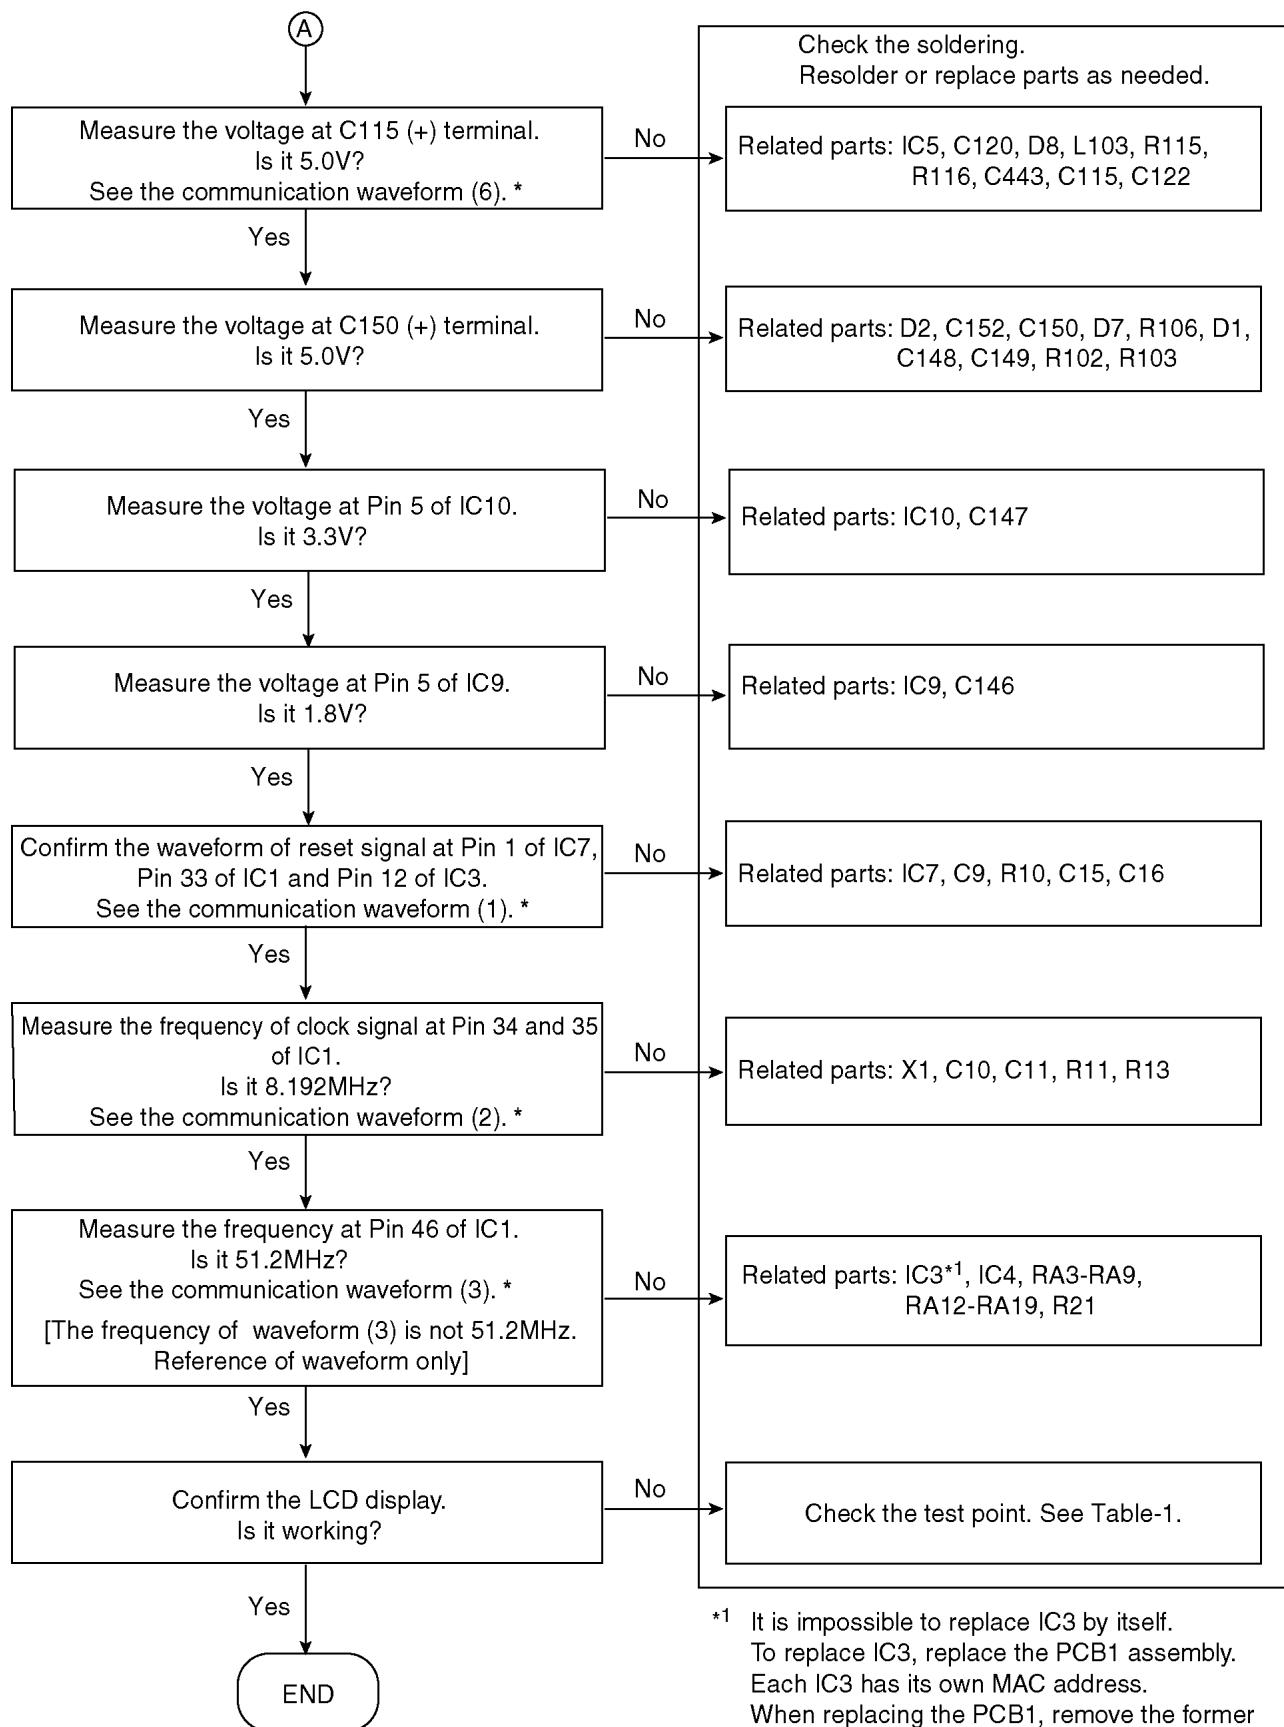

9.1. NO OPERATION

Power Supply : AC adaptor

Power Supply : PoE Hub

*1 It is impossible to replace IC3 by itself.
To replace IC3, replace the PCB1 assembly.
Each IC3 has its own MAC address.
When replacing the PCB1, remove the former
MAC address label from the bottom of the unit
and affix the included label which indicates the
new MAC address.

*** Note:**

Refer to **waveform(1)-(3)and(6)** in **17.4. WAVEFORM** (P.48).

Table-1: PORT OUTPUT AT ERROR

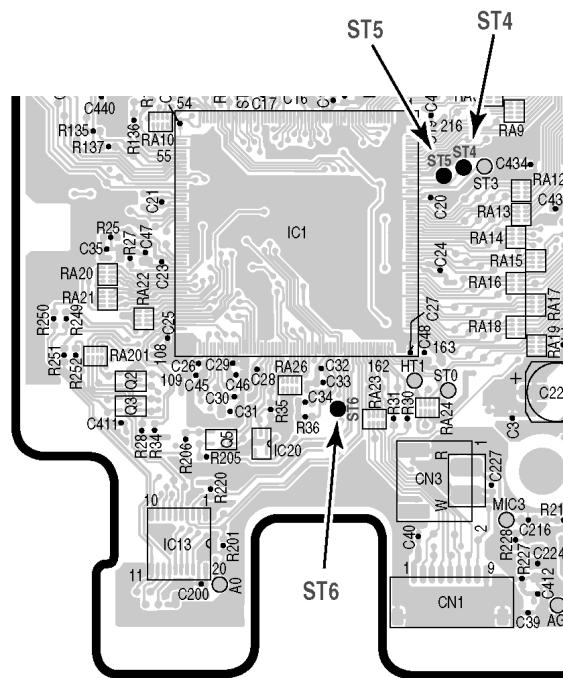

No.	Test Point			Error Item	Related Parts	Handling
	ST4	ST5	ST6			
1	0	1	1	NOT ERROR (VoIP Block is operating.)	-----	-----
2	0	0	1	IPL PROGRAM CHECK SUM ERROR	IC3	(B)
3	0	1	0	WORKING PROGRAM CHECK SUM ERROR	IC3	(B)
4	1	0	0	SDRAM (IC4) ERROR	IC4	(C)
5	1	0	1	Reserved	-----	-----
6	1	1	0	Flash ROM (IC3) ERROR	IC3	(B)
7	1	1	1	VoIP (IC1) ERROR	IC1	(A)

Remarks: 0 = 0V, 1 = 3.3V

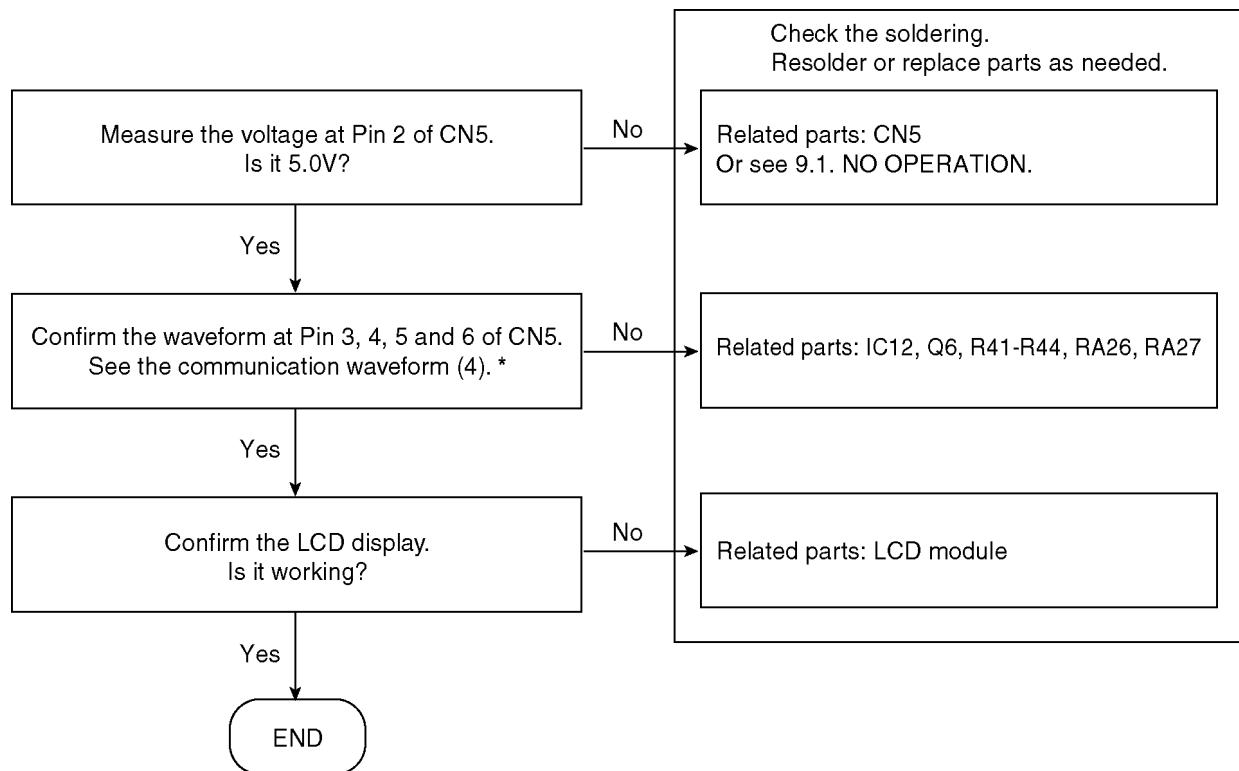

Handling (A): Check the soldering. Resolder or replace parts as needed.

Handling (B): Check the soldering. Resolder parts or replace the PCB1 assembly as needed.

Handling (C): Check the soldering. Resolder or replace parts as needed.

9.2. LCD DOES NOT OPERATE

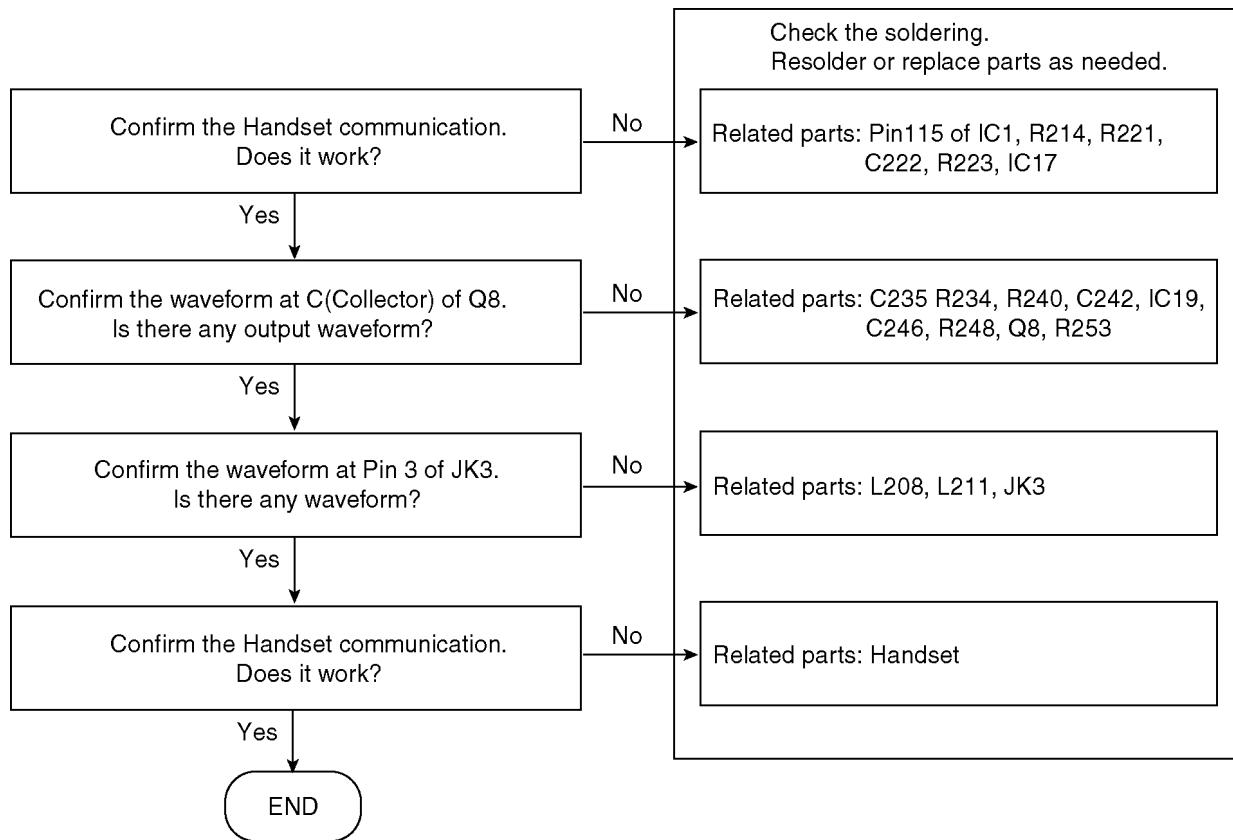

* Note:

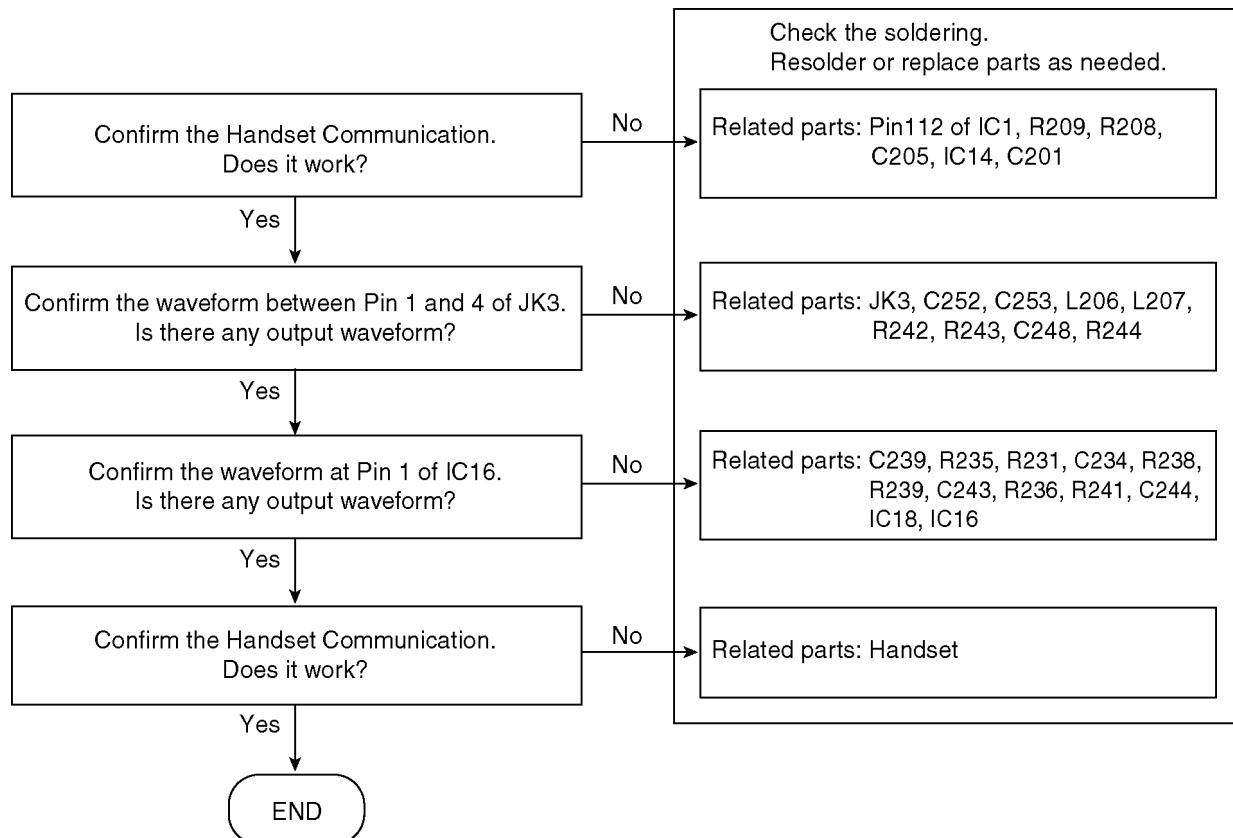

Refer to **waveform (4)** in **17.4. WAVEFORM** (P.48).

9.3. HANDSET DOES NOT WORK

Receive

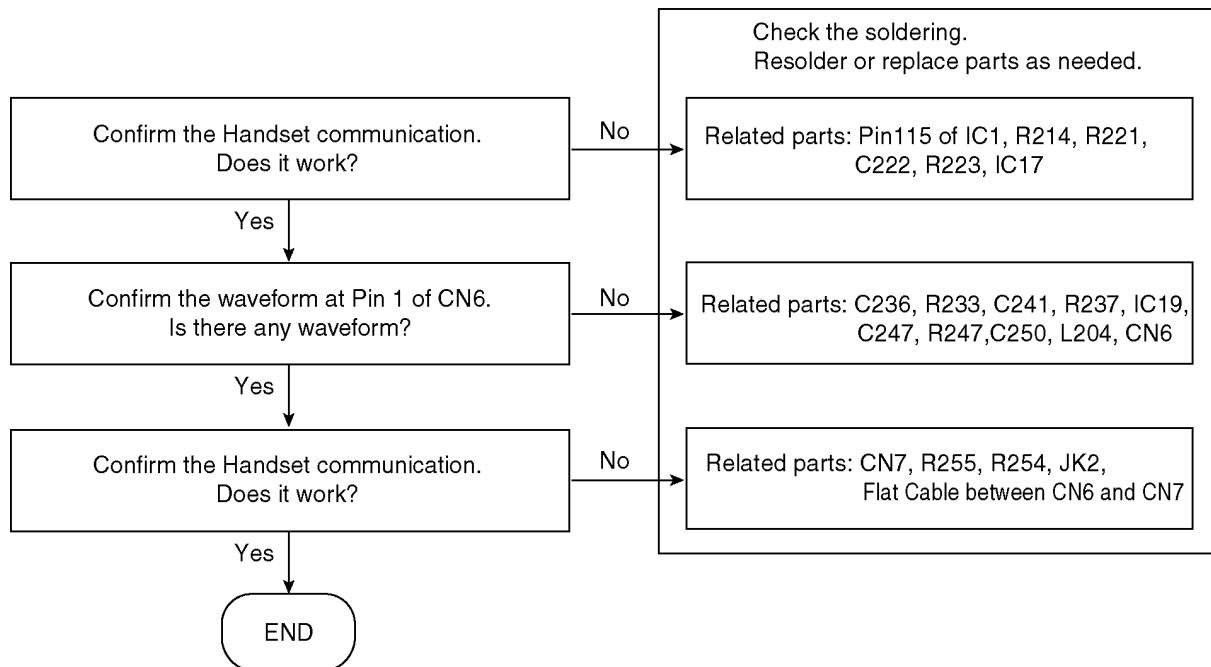

Send

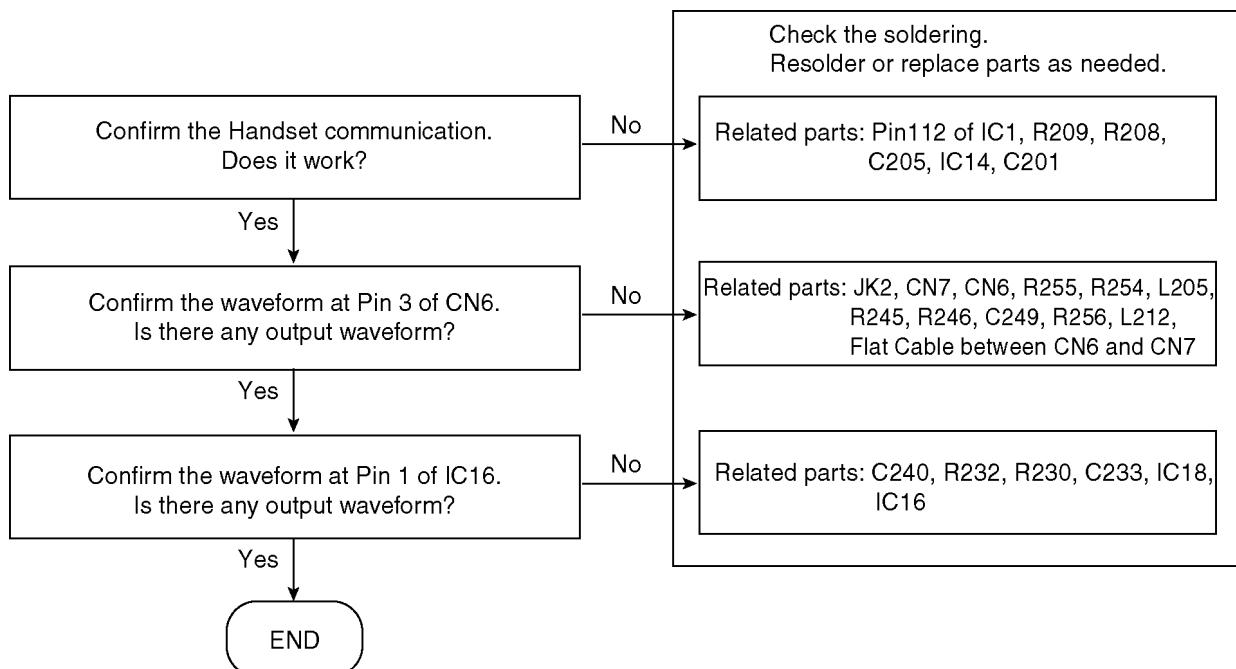

9.4. HEADSET DOES NOT WORK

Receive

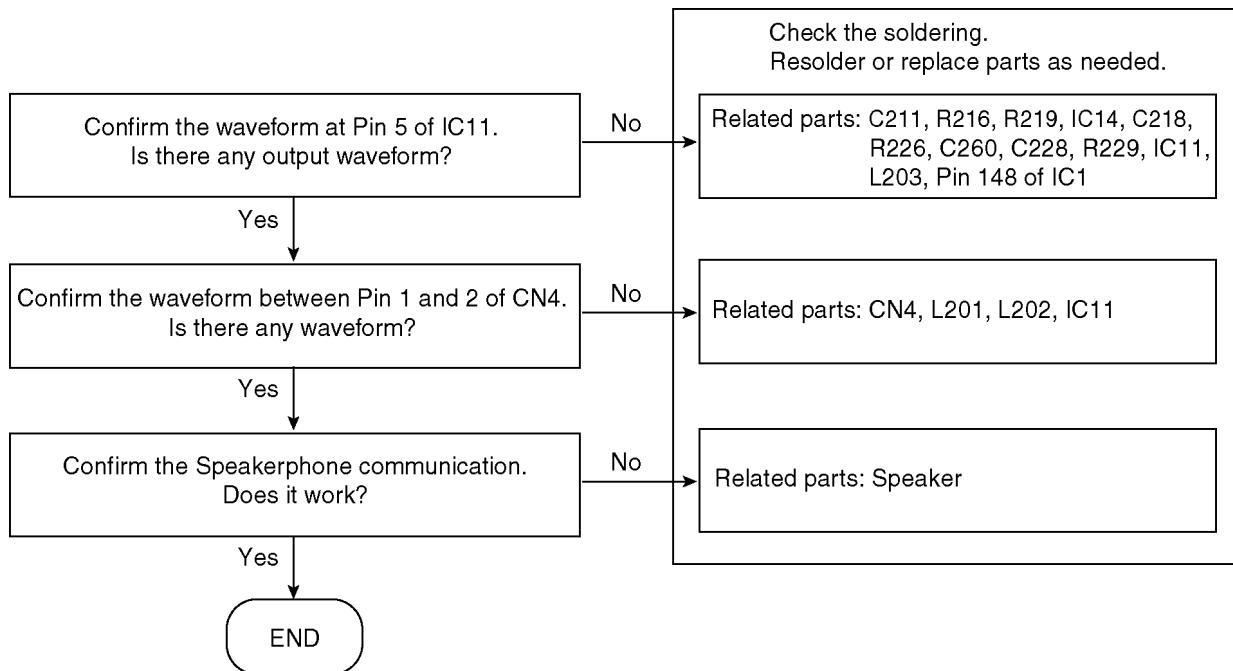

Send

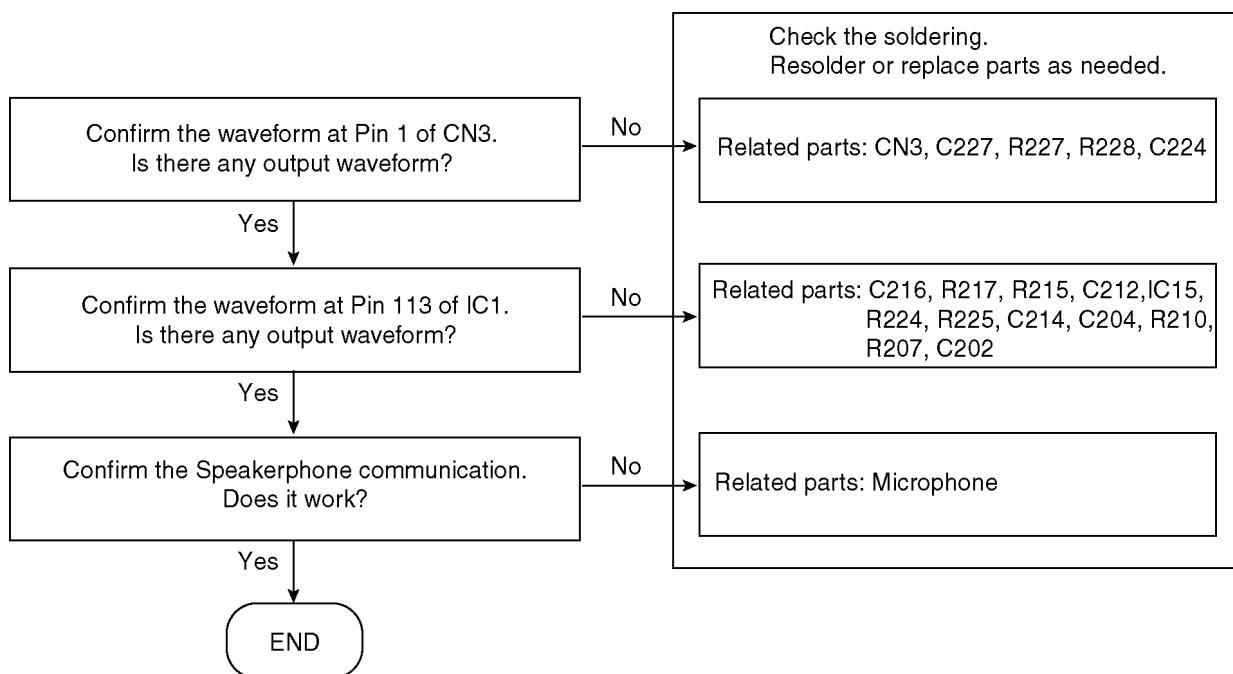

9.5. SPEAKER-PHONE DOES NOT WORK

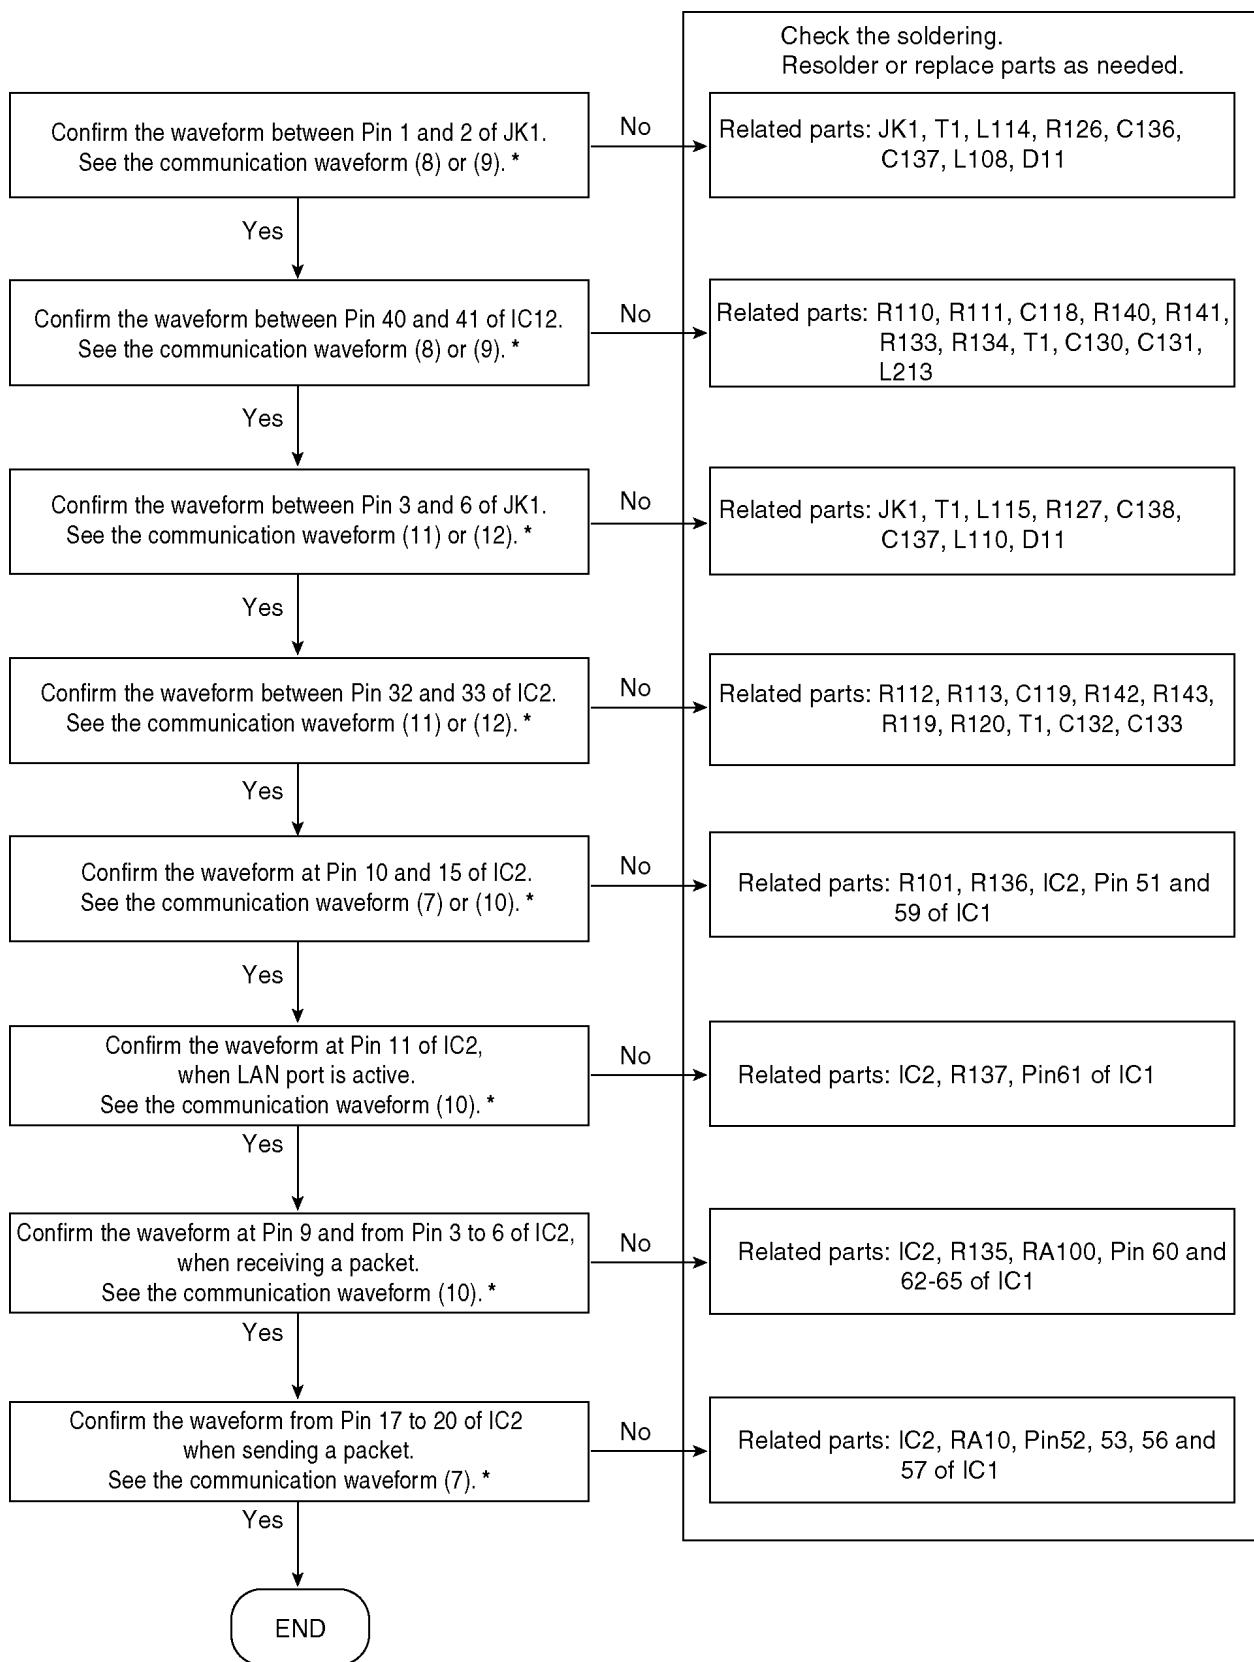

Receive

Send

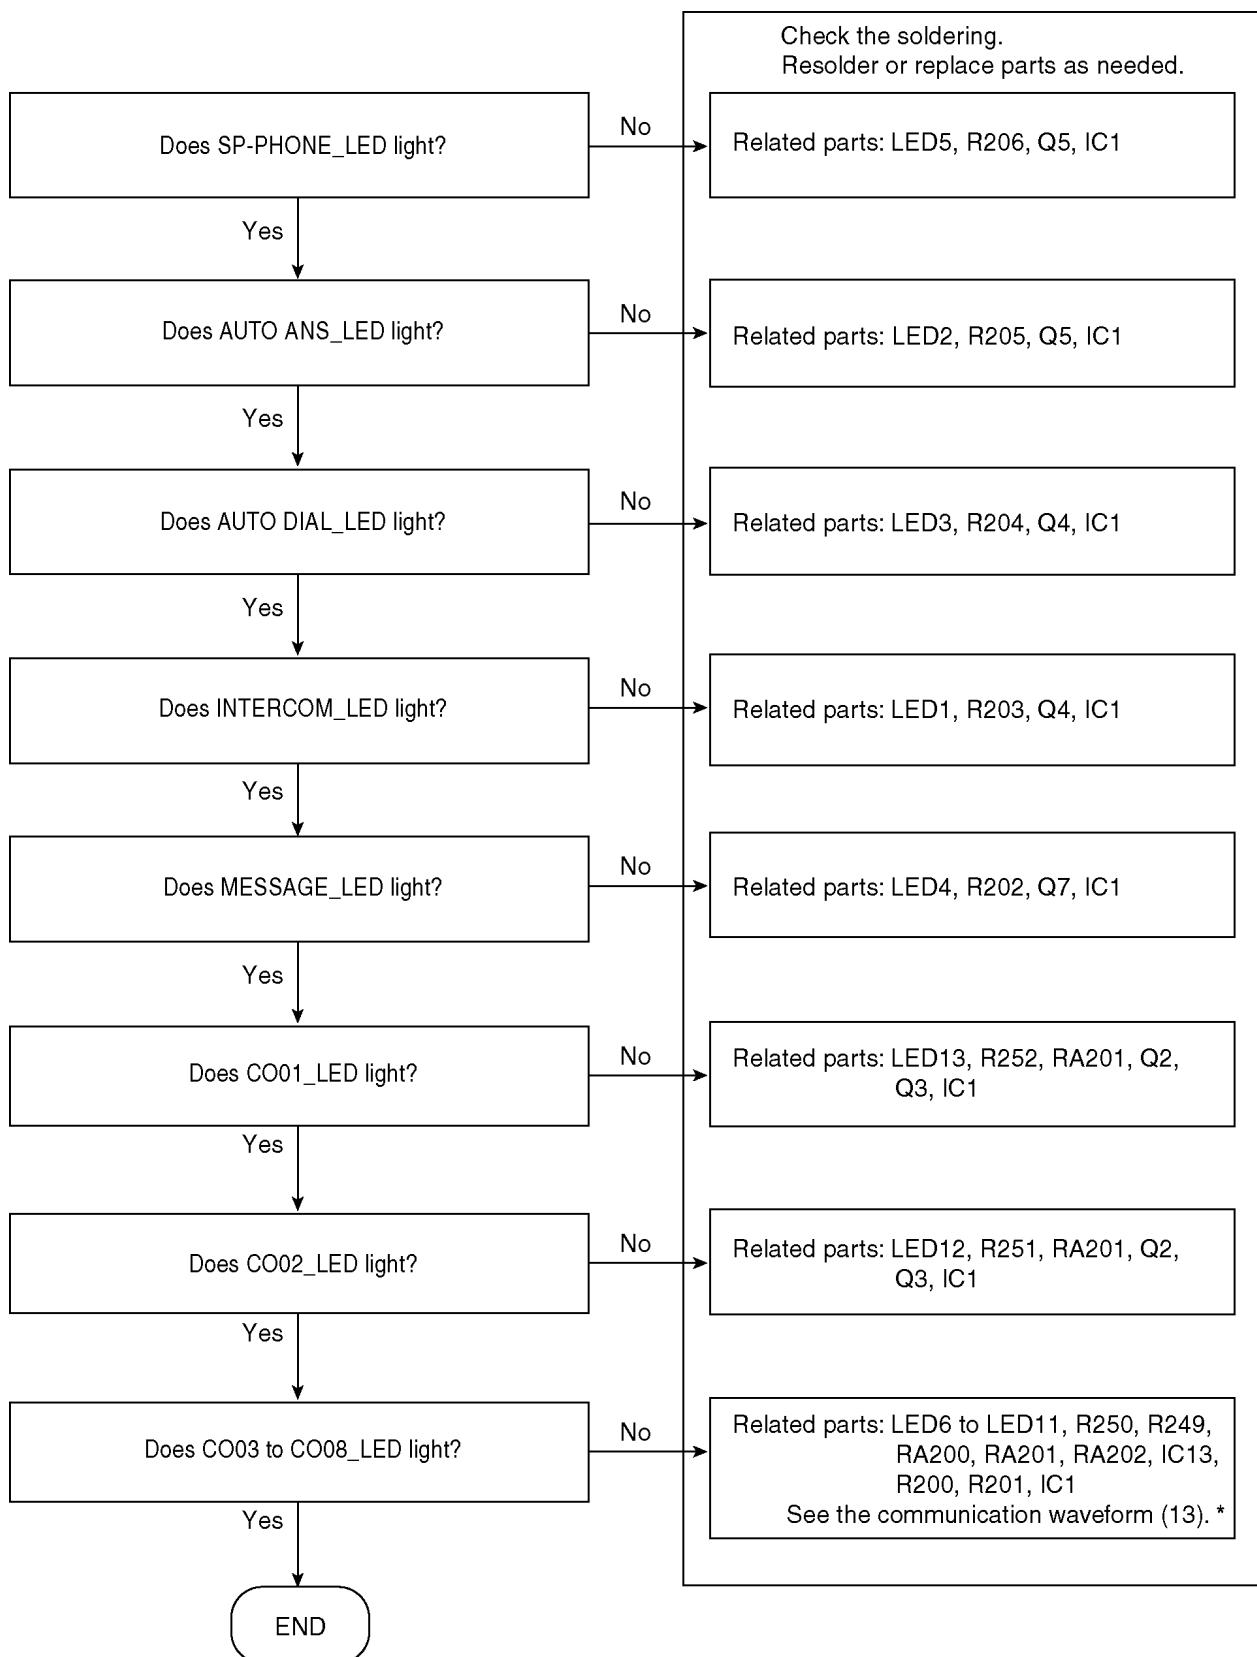

9.6. Ethernet DOES NOT WORK (Ethernet PORT)

* Note:

Refer to **waveform (7) -(12)** in **17.4. WAVEFORM** (P.48).

9.7. LED DOES NOT LIGHT

* Note:

Refer to **waveform (13)** in **17.4. WAVEFORM** (P.48).

This unit has the KEYs and LEDs TEST mode.

By using this mode, you can easily check KEYs and LEDs.

- To TEST mode-

1) Pushing three button (dial 3, 7 and CO1) together. Then turn on a power supply.

2) Press Dial 8.

- LCD displays "LED GREEN MODE"

LED TEST

3) Press Dial 4.

- LCD displays "NNNNNNNNNNNNNNNN".

- All Red LEDs lit.

4) Press Dial 5

- LCD displays "|||||||||||||".

- All Green LEDs lit.

5) Press Dial 6.

- LCD displays "BBBBBBBBBBBBBBBB".

- All LEDs go Off.

KEY TEST

6) Press each keys. (except dial 12 keys.)

- LCD display each KEY name.

Key	LCD Display
PROG.	PROGRAM
MESSAGE	MESSAGE
VoL. △	UP
VoL. ▽	DOWN
INTERCOM	INTERCOM
TRANSFER	TRANSFER
AUTO ANS	AUTO ANSWER
AUTO DIAL	AUTO DIAL
REDIAL	REDIAL
FLASH/RECALL	FLASH
HOLD	HOLD
SP-PHONE	SP-PHONE
CO1 – CO8	CO1 – CO8

- Quit TEST mode-

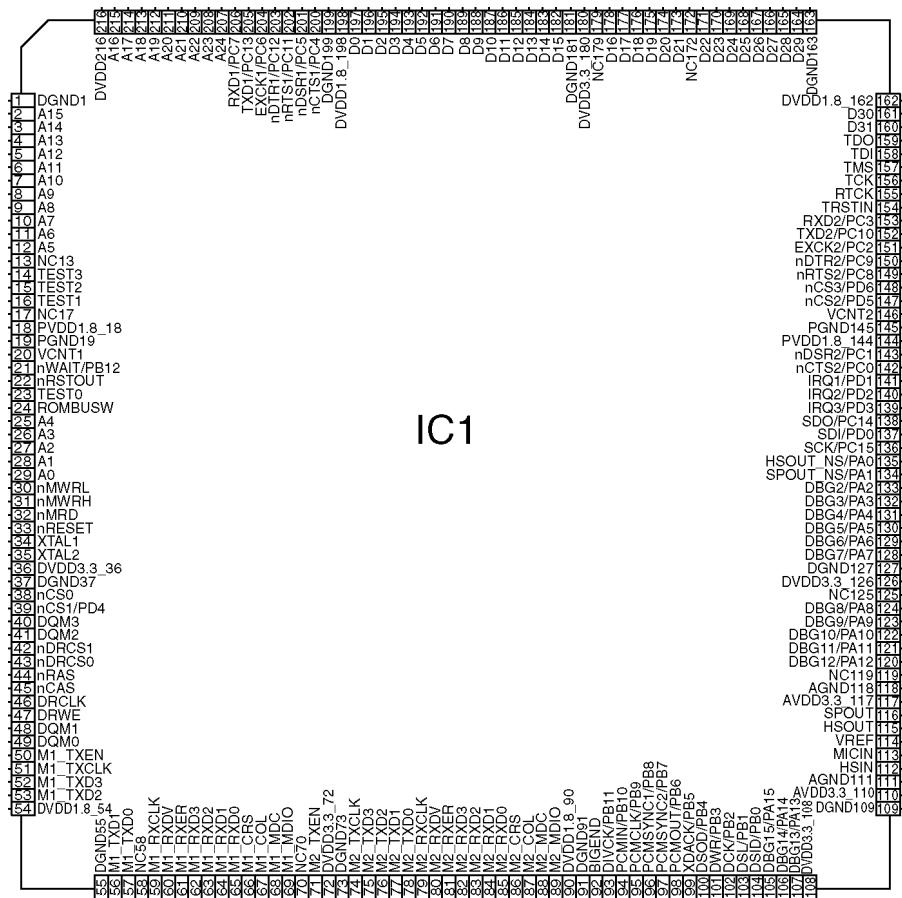

Disconnect and connect AC adaptor.

or

Disconnect and connect Ethernet cable.

12	VCC	-	Output from the startup regulator	
13	VIN	-	Input supply voltage	
14	NC	-	No internal connection	

10.4. IC6 (PoE Interface Controller)

Pin No.	Terminal Name	I/O Setting	Contents of Control	Remark
1	NC	-	No Internal Connection.	
2	Rclass	I	Class Select Input.	
3	NC	-	No Internal Connection.	
4	Vin	I	Power Input. Tie to system -48V through the input diode bridge.	
5	Vout	O	Power Output. Supplies -48V to the PD load through an internal power MOSFET that limits input current. VOUT is high impedance until the input voltage rises above the turn-on UVLO threshold. The output is then current limited. See Applications Information.	
6	nPWRGD	O	Power Good Output , Open-Drain Signals to the PD load that the LTC4257-1 MOSFET is on and that the PD's DC/DC converter can start operation. Low impedance indicates power is good. PWRGD is high impedance during detection, classification and in the event of a thermal overload. PWRGD is referenced to VIN.	
7	NC	-	No Internal Connection.	
8	GND	-	Digital GND

12 HOW TO REPLACE A FLAT PACKAGE IC

Even if you do not have the special tools (for example, a spot heater) to remove the Flat IC, with some solder (large amount), a soldering iron and a cutter knife, you can easily remove the ICs that have more than 100 pins.

12.1. PREPARATION

- PbF (: Pb free) Solder
- Soldering Iron

Tip Temperature of $700^{\circ}\text{F} \pm 20^{\circ}\text{F}$ ($370^{\circ}\text{C} \pm 10^{\circ}\text{C}$)

Note: We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.

- Flux

Recommended Flux: Specific Gravity → 0.82.

Type → RMA (lower residue, non-cleaning type)

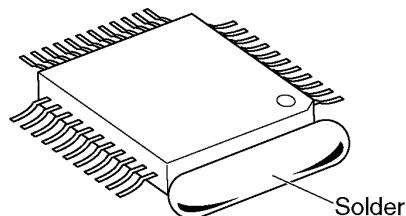

Note: See **ABOUT LEAD FREE SOLDER (PbF: Pb free)** (P.3).

12.2. REMOVAL PROCEDURE

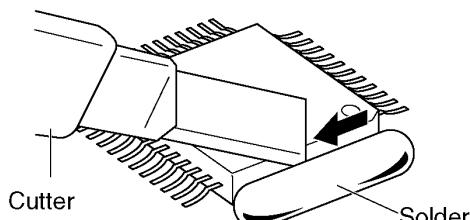

1. Put plenty of solder on the IC pins so that the pins can be completely covered.

Note:

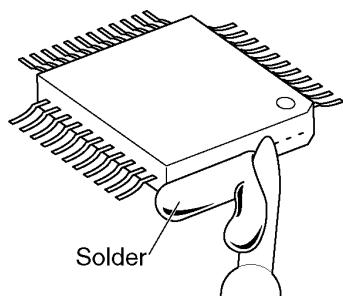

If the IC pins are not soldered enough, you may give pressure to the P.C. board when cutting the pins with a cutter.

2. Make a few cuts into the joint (between the IC and its pins) first and then cut off the pins thoroughly.

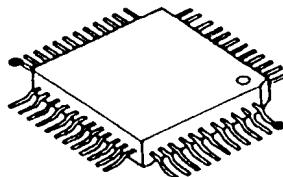

3. While the solder melts, remove it together with the IC pins.

When you attach a new IC to the board, remove all solder left on the land with some tools like a soldering wire. If some solder is left at the joint on the board, the new IC will not be attached properly.

12.3. INSTALLATION PROCEDURE

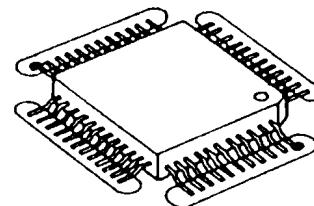

1. Tack the flat pack IC to the PCB by temporarily soldering two diagonally opposite pins in the correct positions on the PCB.

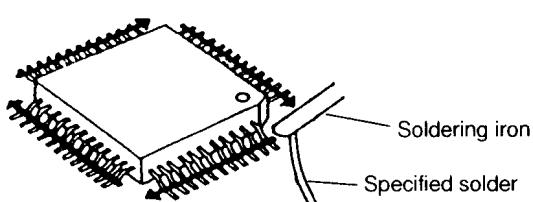

● - - - - - Temporary soldering point.

Be certain each pin is located over the correct pad on the PCB.

2. Apply flux to all of the pins on the IC.

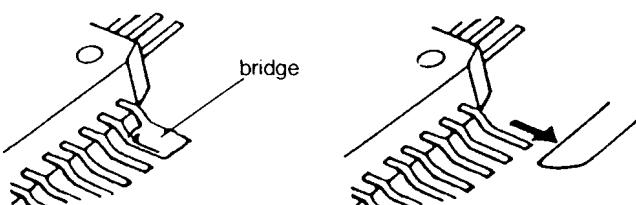

3. Being careful to not unsolder the tack points, slide the soldering iron along the tips of the pins while feeding enough solder to the tip so that it flows under the pins as they are heated.

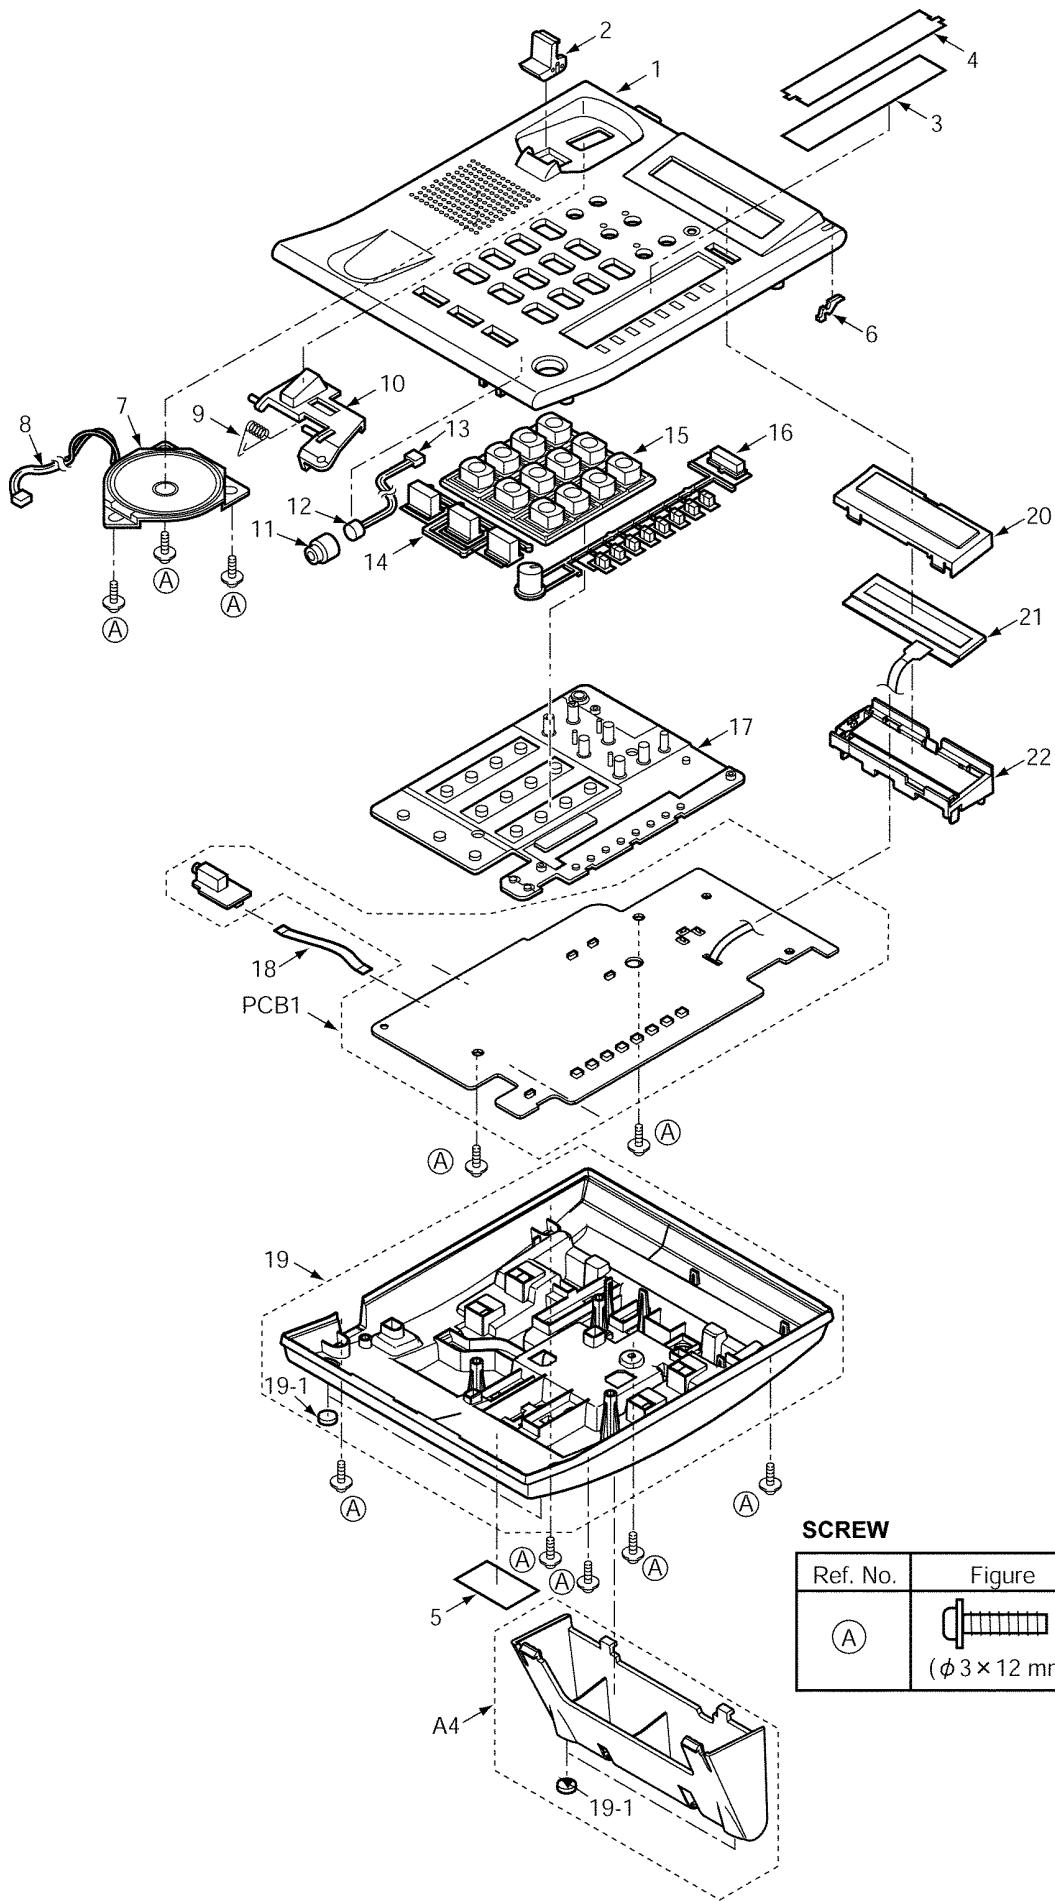

12.4. REMOVING SOLDER FROM BETWEEN PINS

1. Add a small amount of solder to the bridged pins.

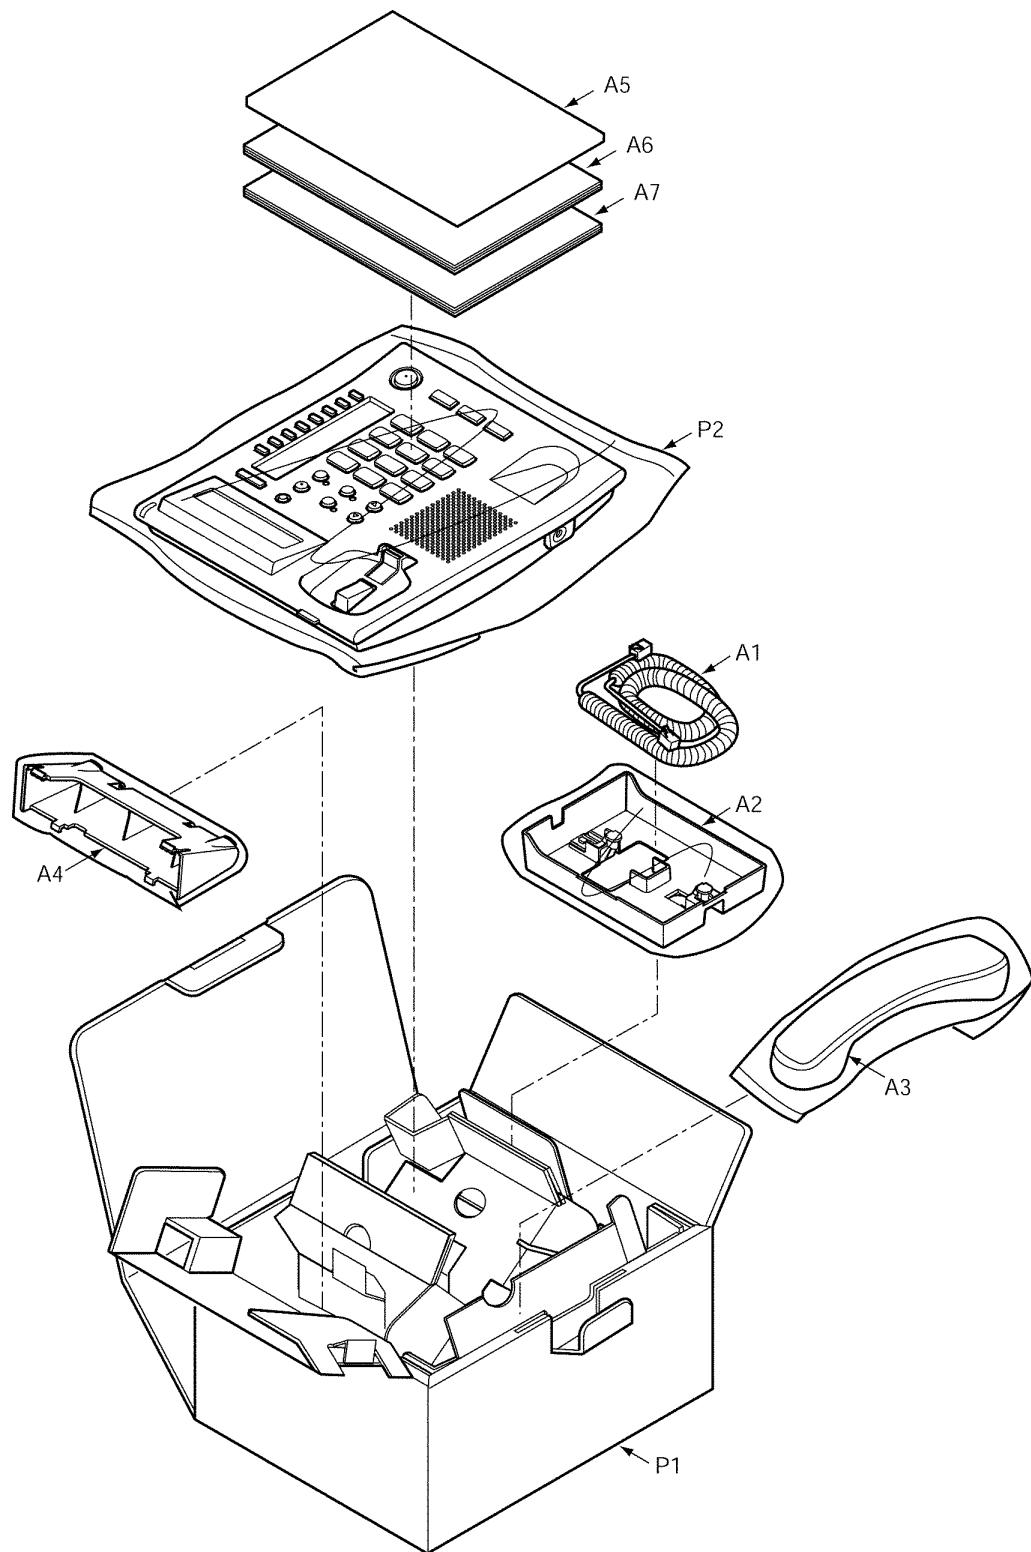

2. With a hot iron, use a sweeping motion along the flat part of the pin to draw the solder from between the adjacent pads.

13 CABINET AND ELECTRICAL PARTS LOCATION

14 ACCESSORIES AND PACKING MATERIALS

15 REPLACEMENT PARTS LIST

1. RTL (Retention Time Limited)

Note:

The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependent on the type of assembly, and in accordance with the laws governing parts and product retention.

After the end of this period, the assembly will no longer be available.

2. Important safety notice

Components identified by mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

3. The S mark means the part is one of some identical parts.

For that reason, it may be different from the installed part.

4. ISO code (Example: ABS-HB) of the remarks column shows quality of the material and a flame resisting grade about plastics.

5. RESISTORS & CAPACITORS

Unless otherwise specified;

All resistors are in ohms (Ω) K=1000 Ω , M=1000k Ω

All capacitors are in MICRO FARADS (μF) P= $\mu\mu F$

-	PQLV1	OPTIONAL AC ADAPTOR for Canada and other 100V areas	⚠
-	PQLV1CE	OPTIONAL AC ADAPTOR for Russia, Eastern Europe and other 200V areas	⚠
-	PQLV1E	OPTIONAL AC ADAPTOR for Hong Kong, Singapore and Malaysia	⚠
-	PQLV1AL	OPTIONAL AC ADAPTOR for Oceania	⚠
-	PQLV1AG	OPTIONAL AC ADAPTOR for Argentina	⚠
-	PQLV1BR	OPTIONAL AC ADAPTOR for Brazil	⚠

16 FOR THE SCHEMATIC DIAGRAM

Note:

1. DC voltage measurements are taken with an oscilloscope or a tester with a ground.
2. The schematic diagrams and circuit board may be modified at any time with the development of new technology.

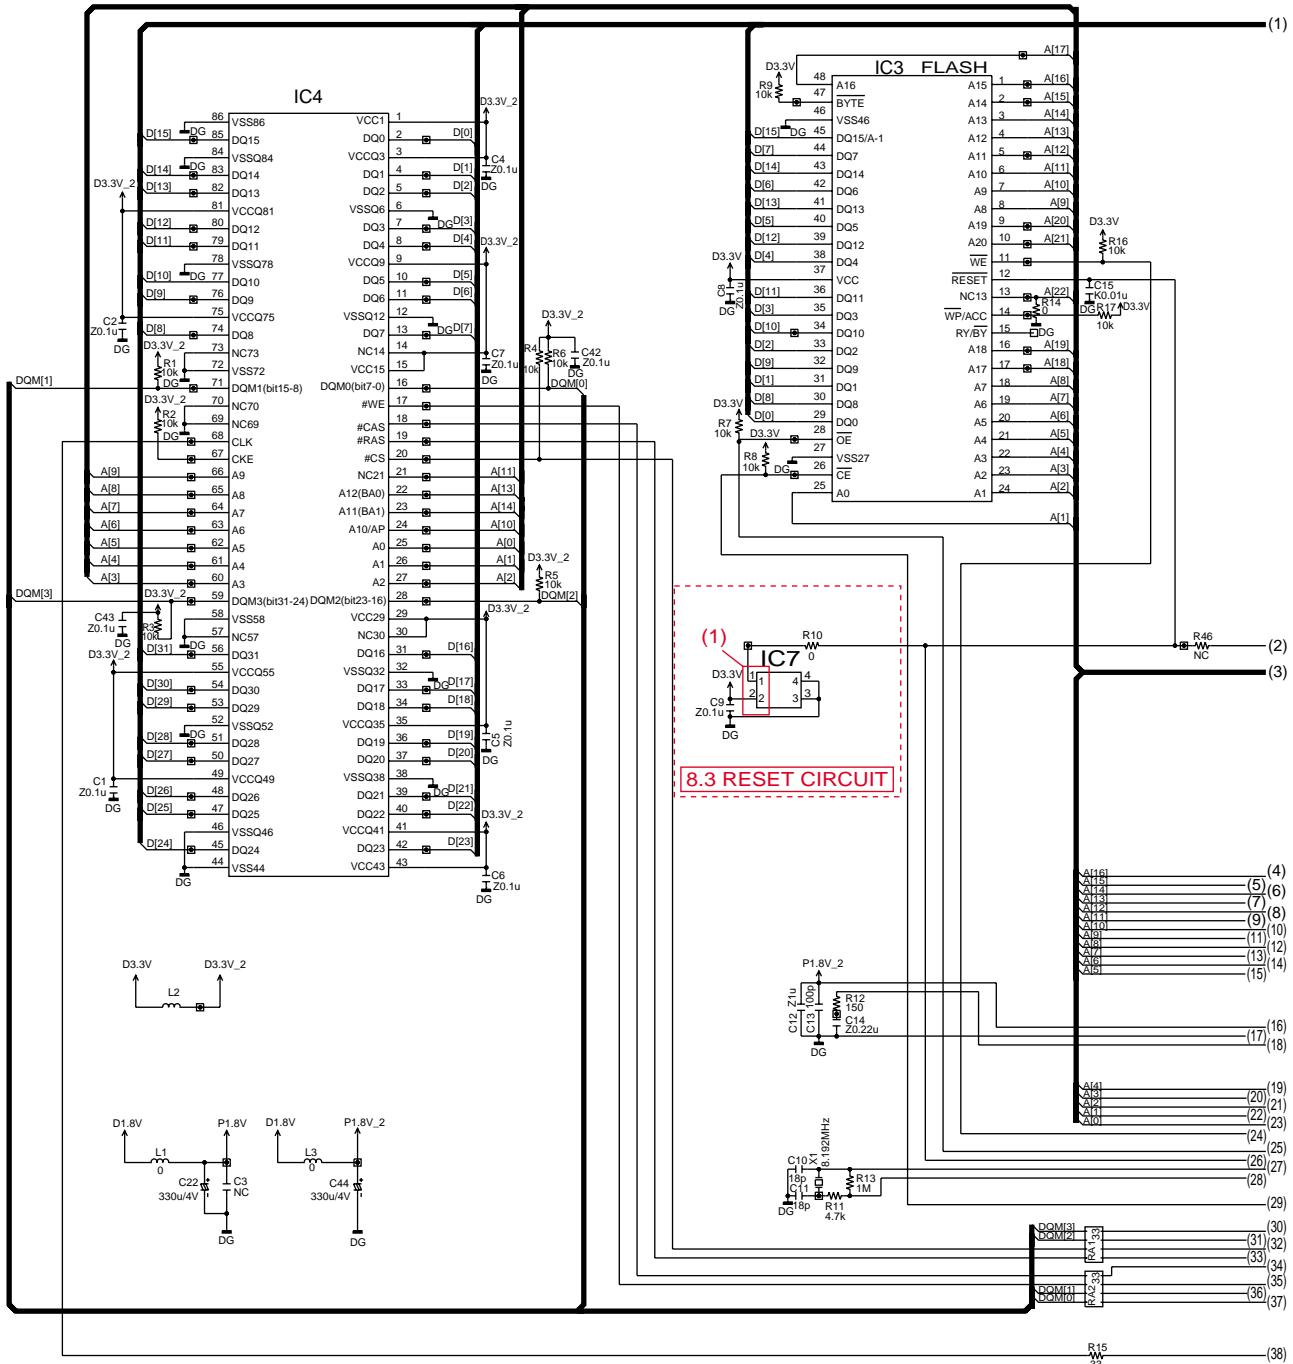

Important safety notice

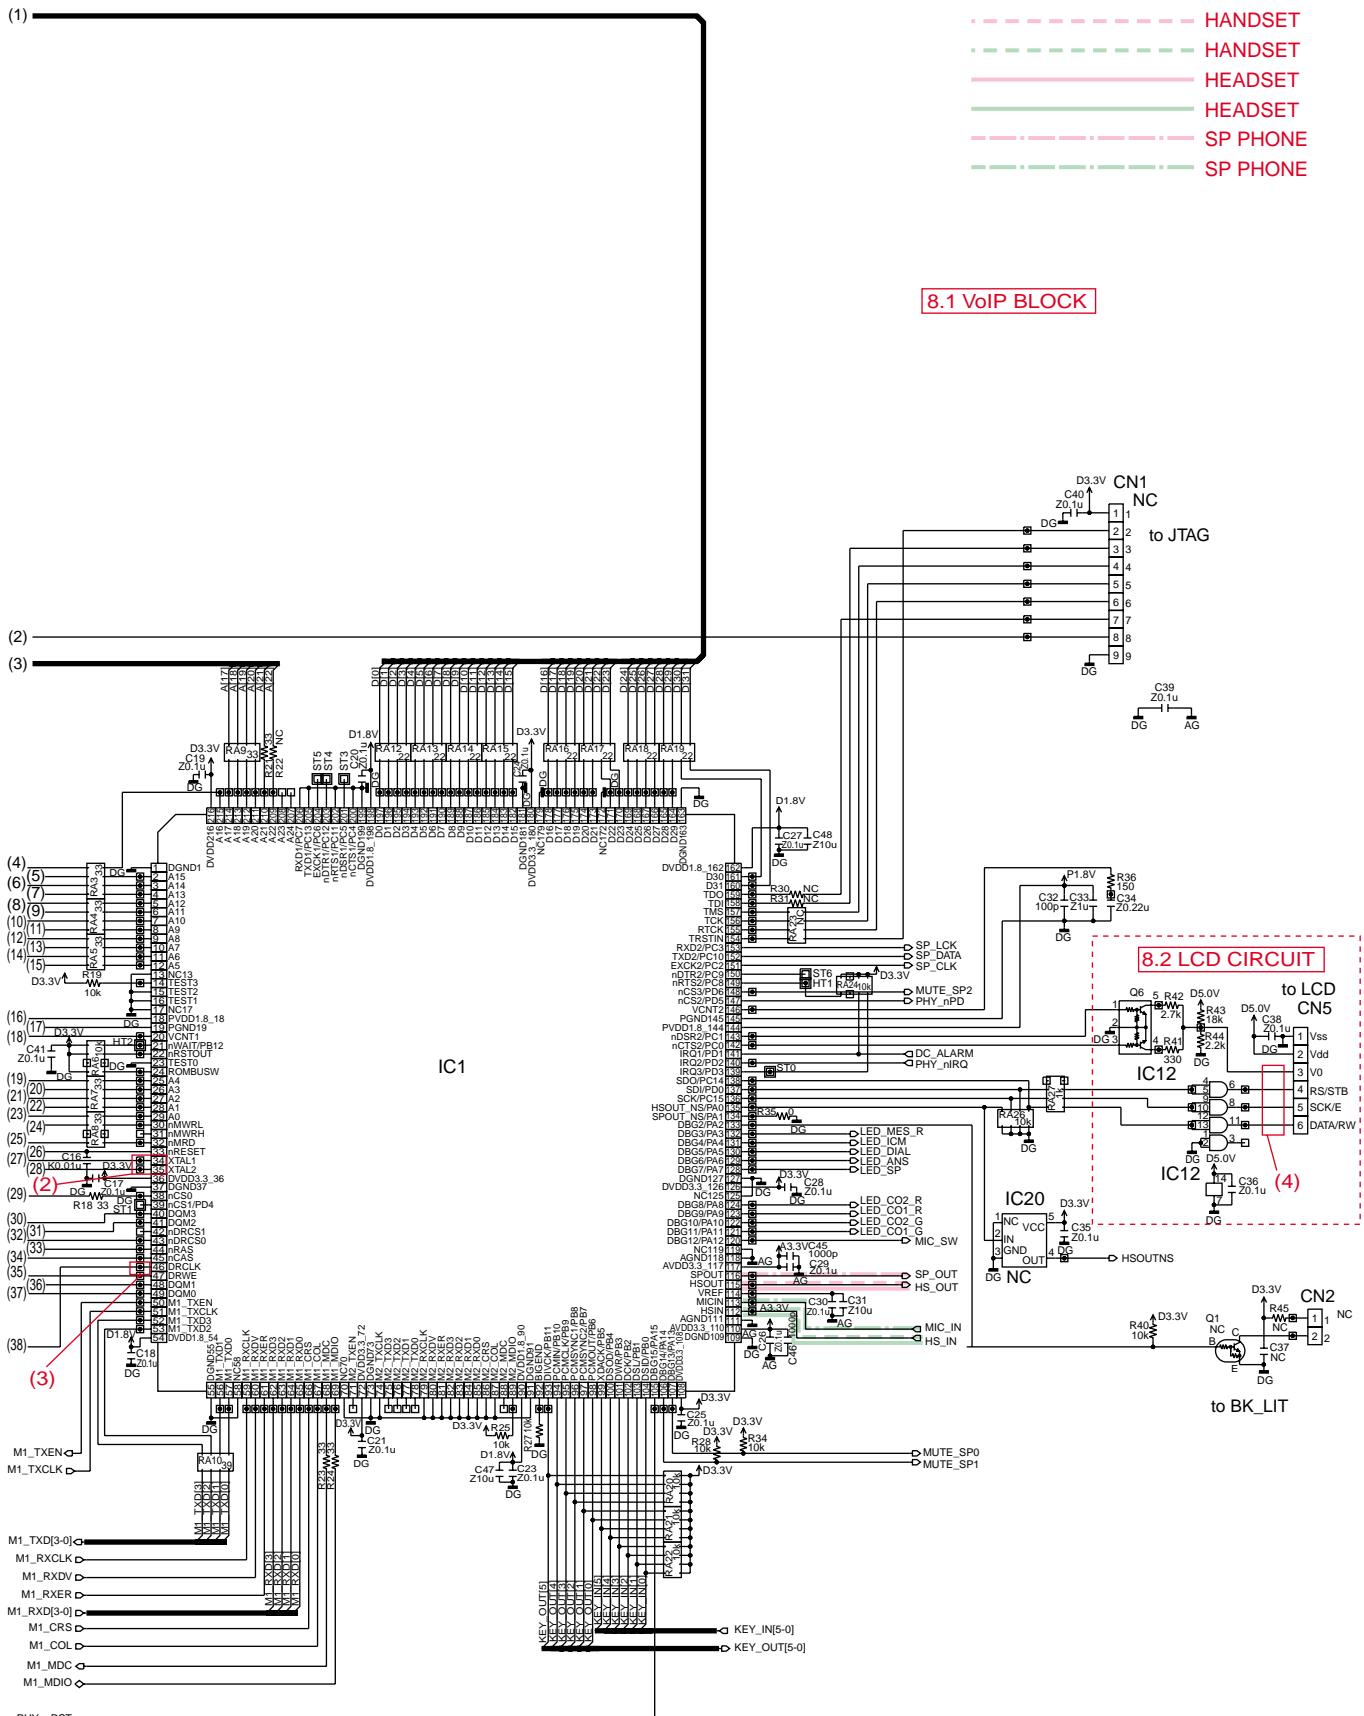

Components identified by mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

17 SCHEMATIC DIAGRAM

17.1. VoIP/LCD block

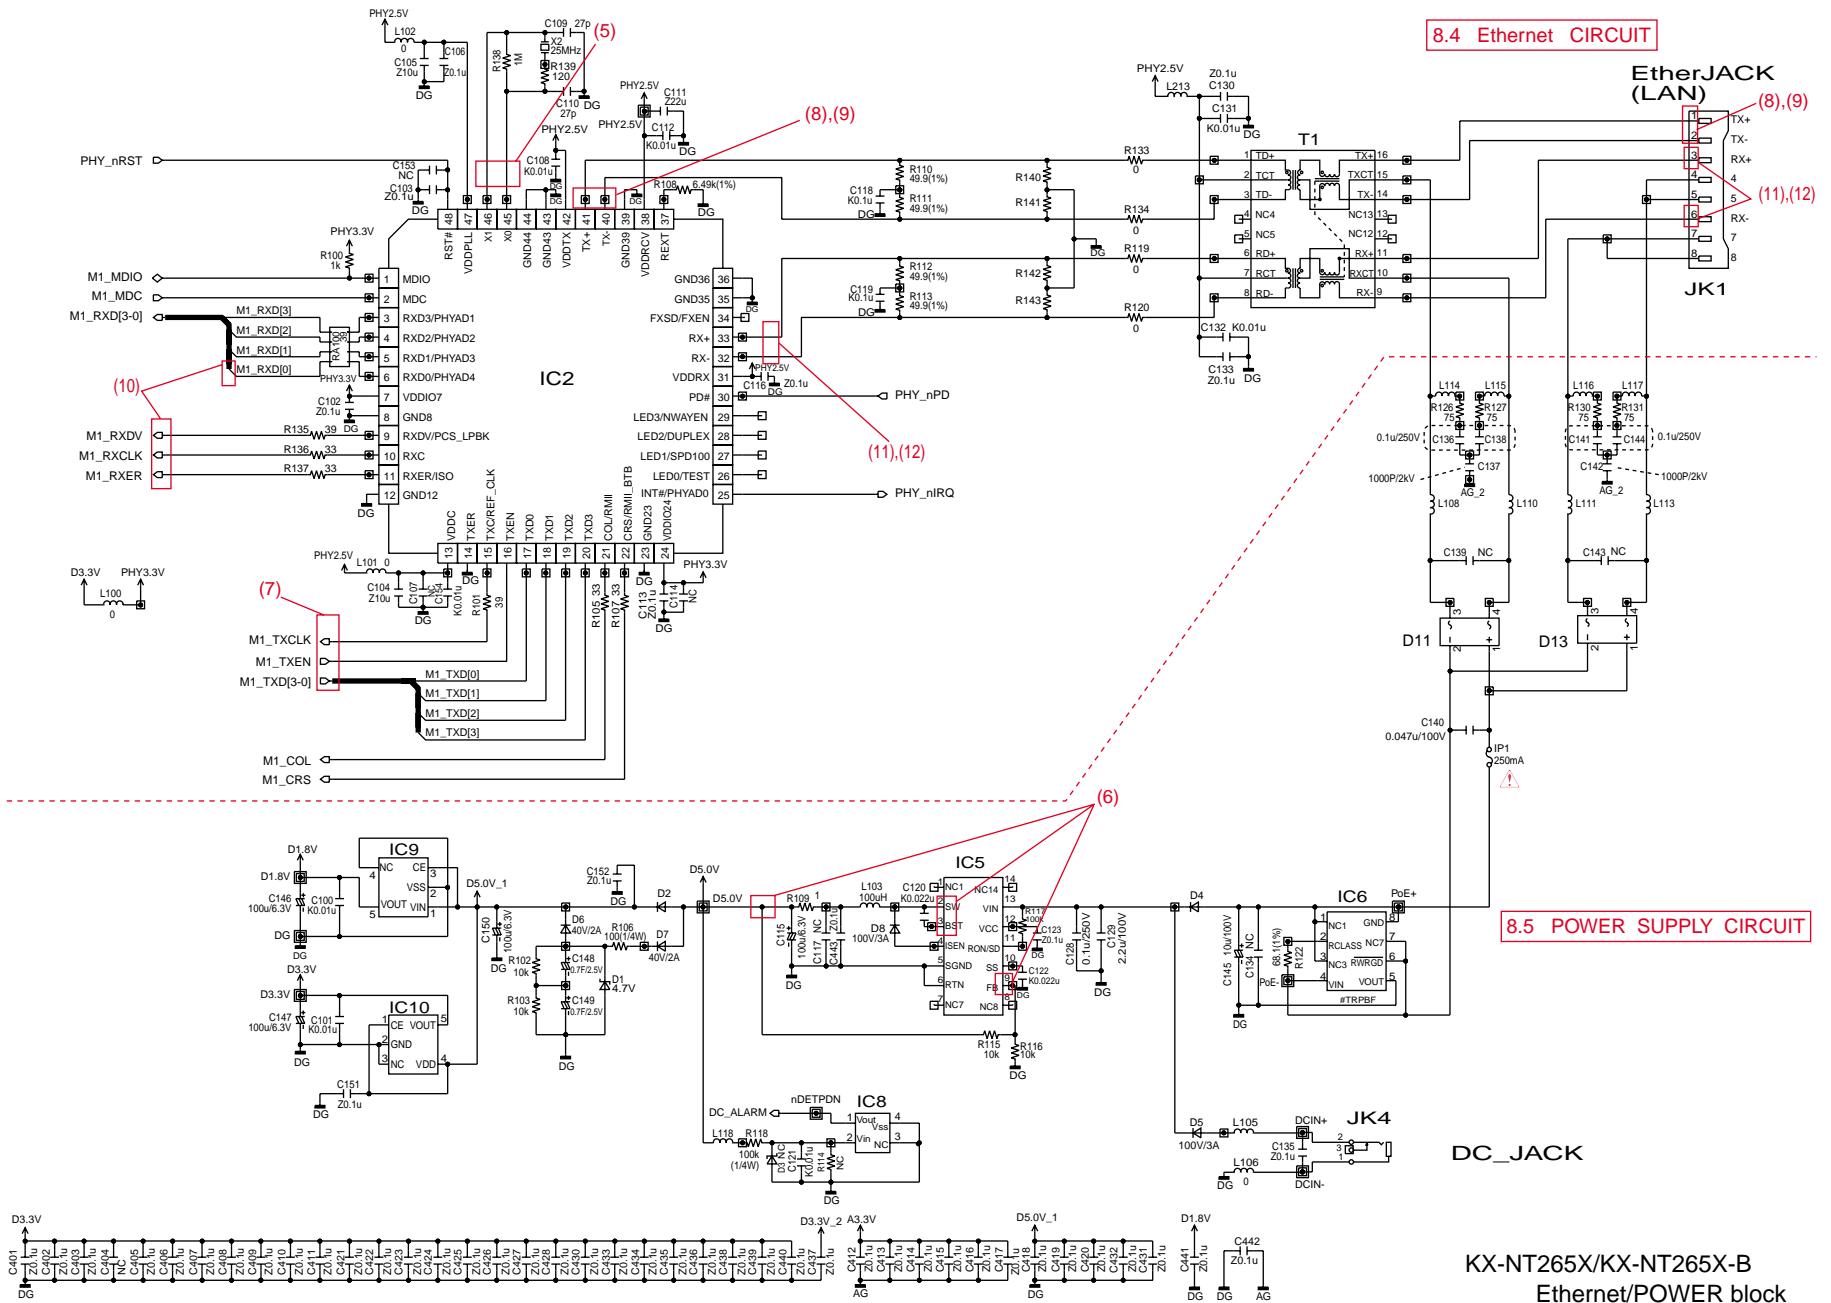

KX-NT265X/KX-NT265X-B VoIP/LCD block(1/2)

KX-NT265X/KX-NT265X-B VoIP/LCD block(2/2)

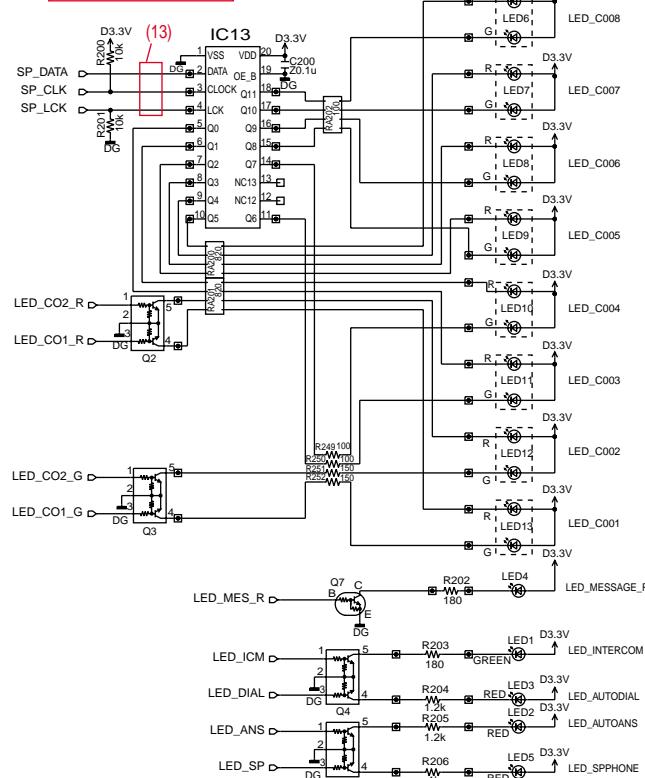

17.2. Ethernet/Power block

17.3. ANALOG/KEY/LED block

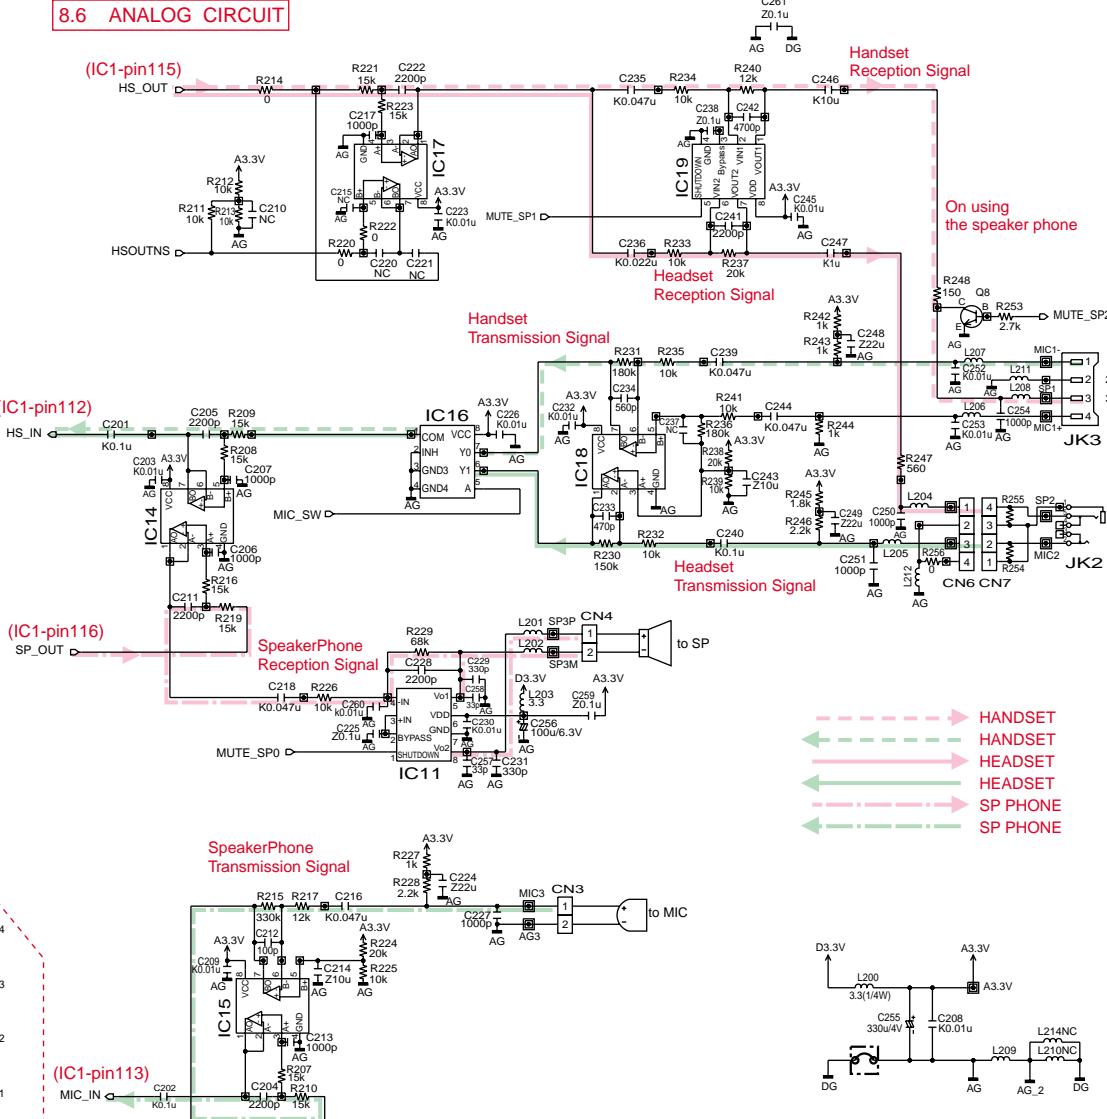

47

8.8 LED CIRCUIT

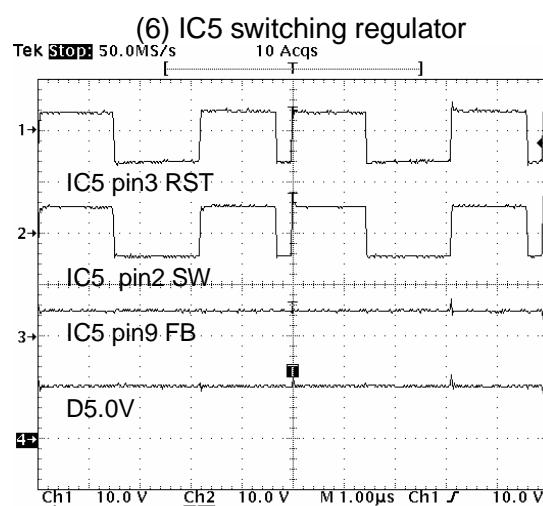

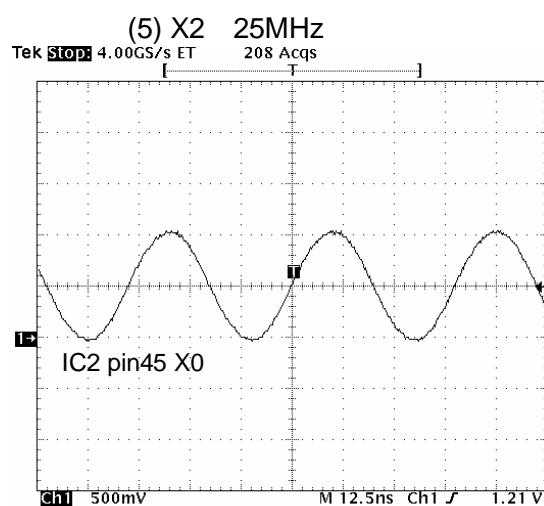

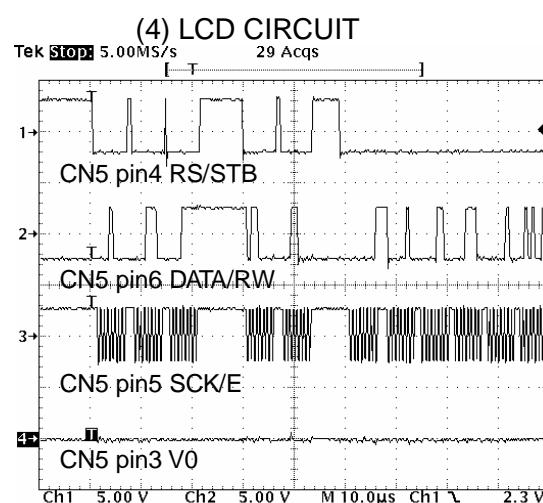

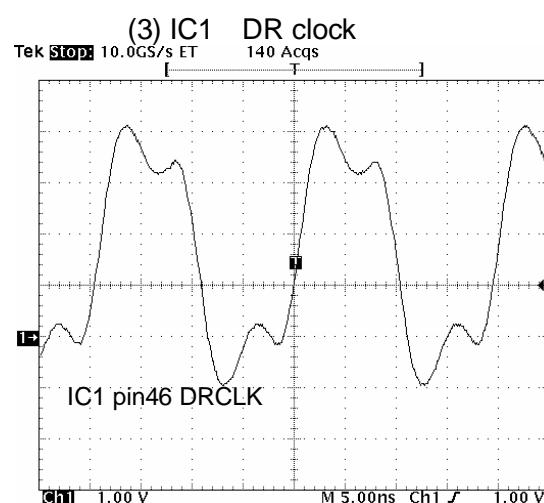

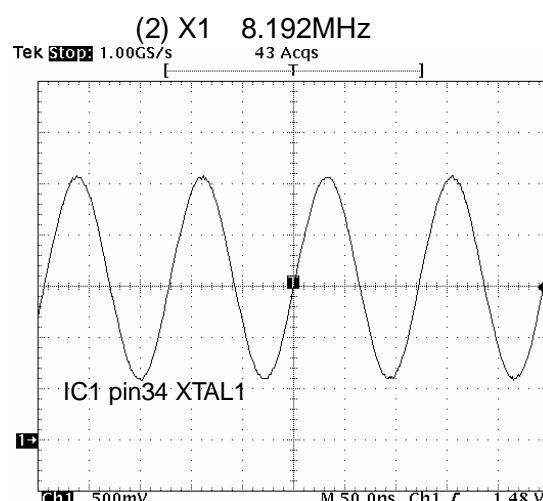

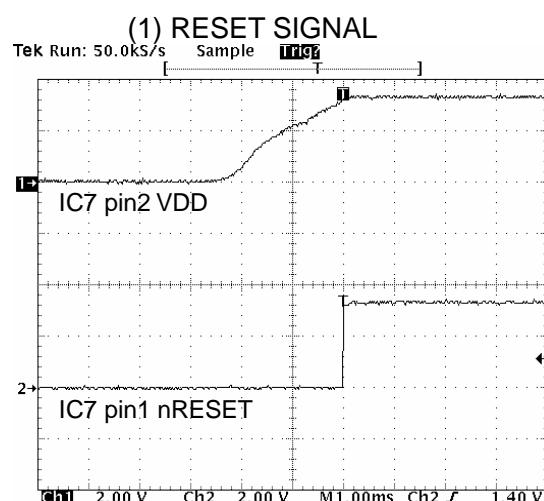

8.7 KEY INPUT CONTROL CIRCUIT

8.6 ANALOG CIRCUIT

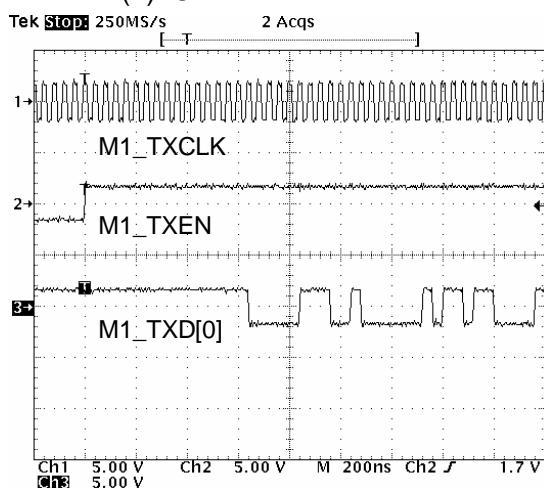

KX-NT265XKX-NT265X-B ANALOG/KEY/LED block

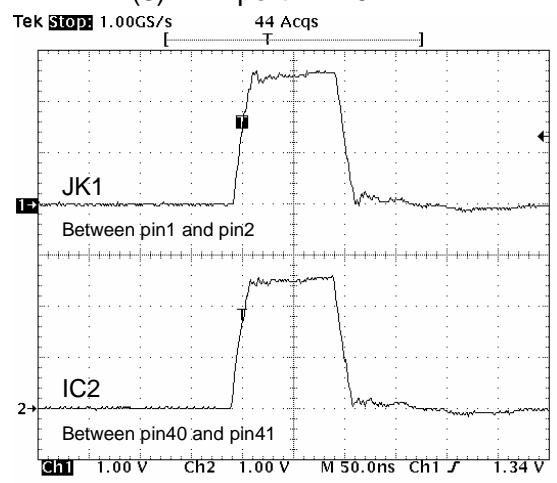

17.4. WAVEFORM

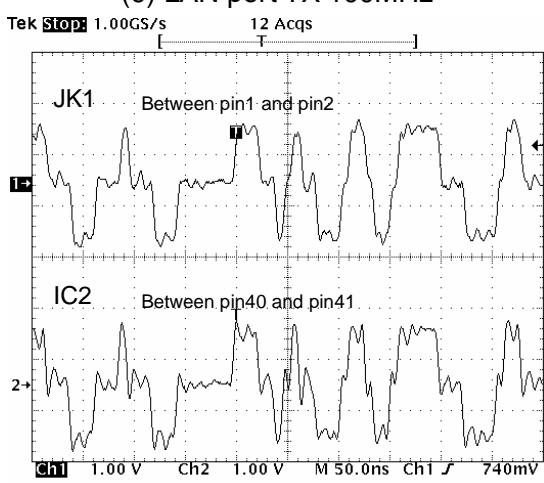

(7) IC2 M1 TX

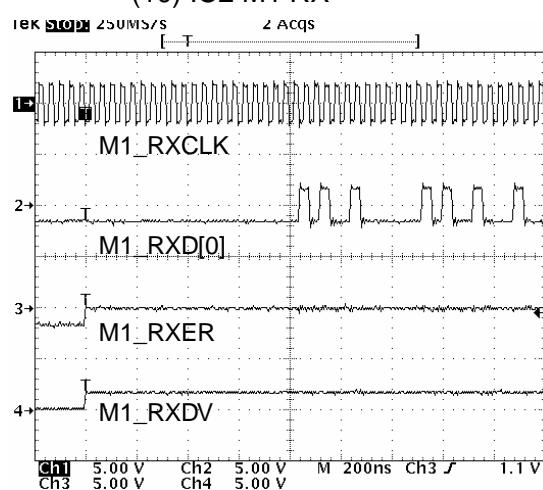

(8) LAN port TX 10MHz

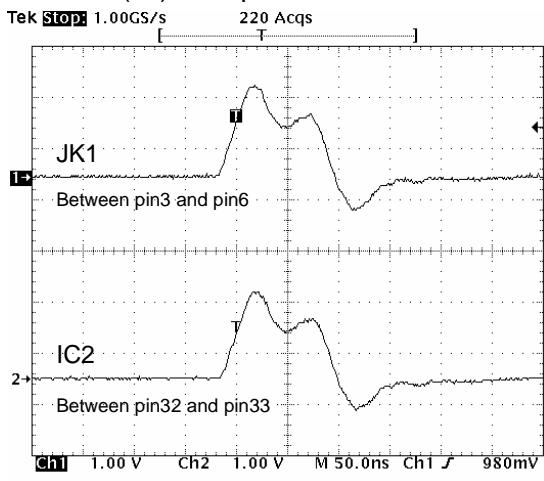

(9) LAN port TX 100MHz

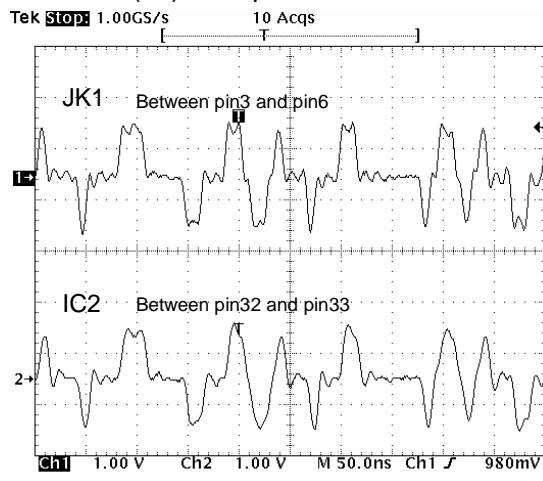

(10) IC2 M1 RX

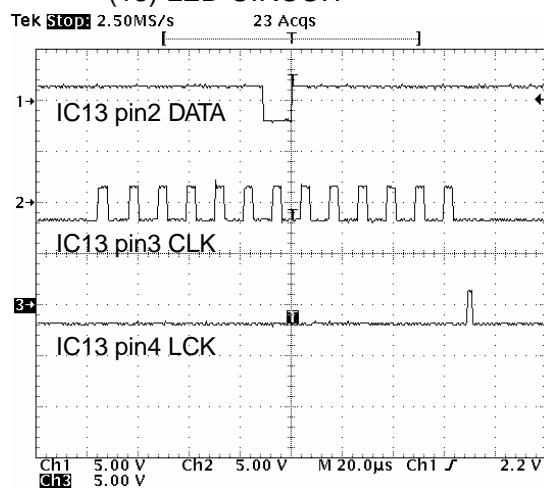

(11) LAN port RX 10MHz

(12) LAN port RX 100MHz

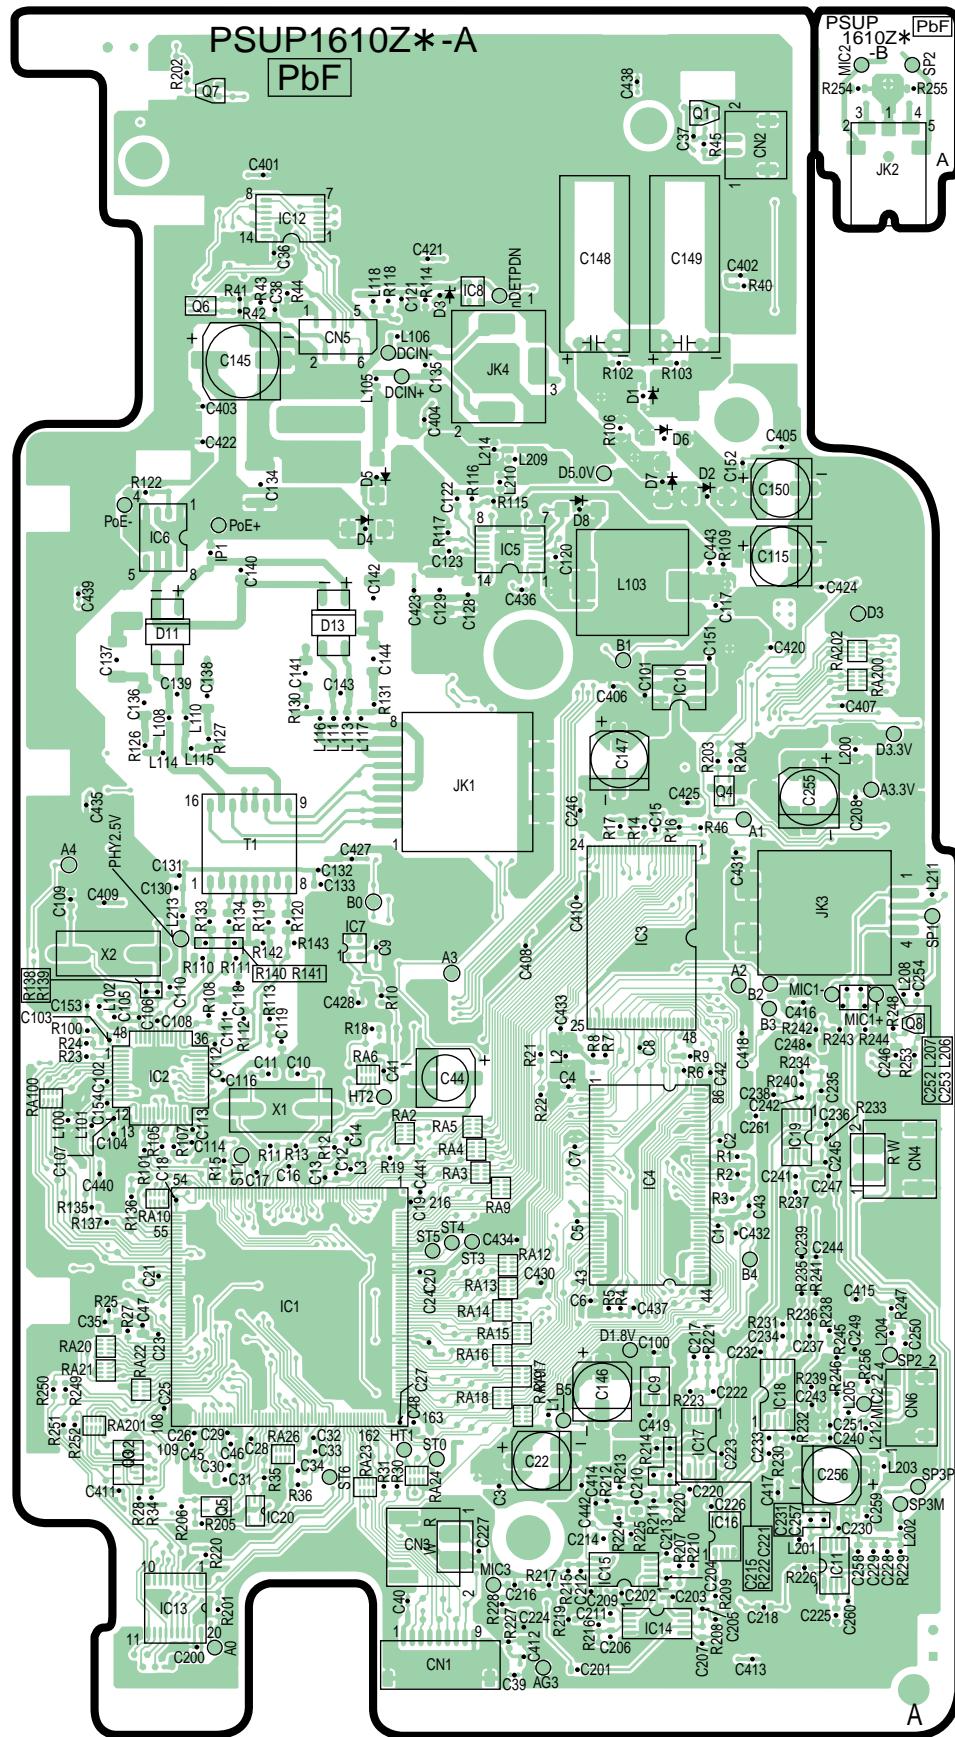

(13) LED CIRCUIT

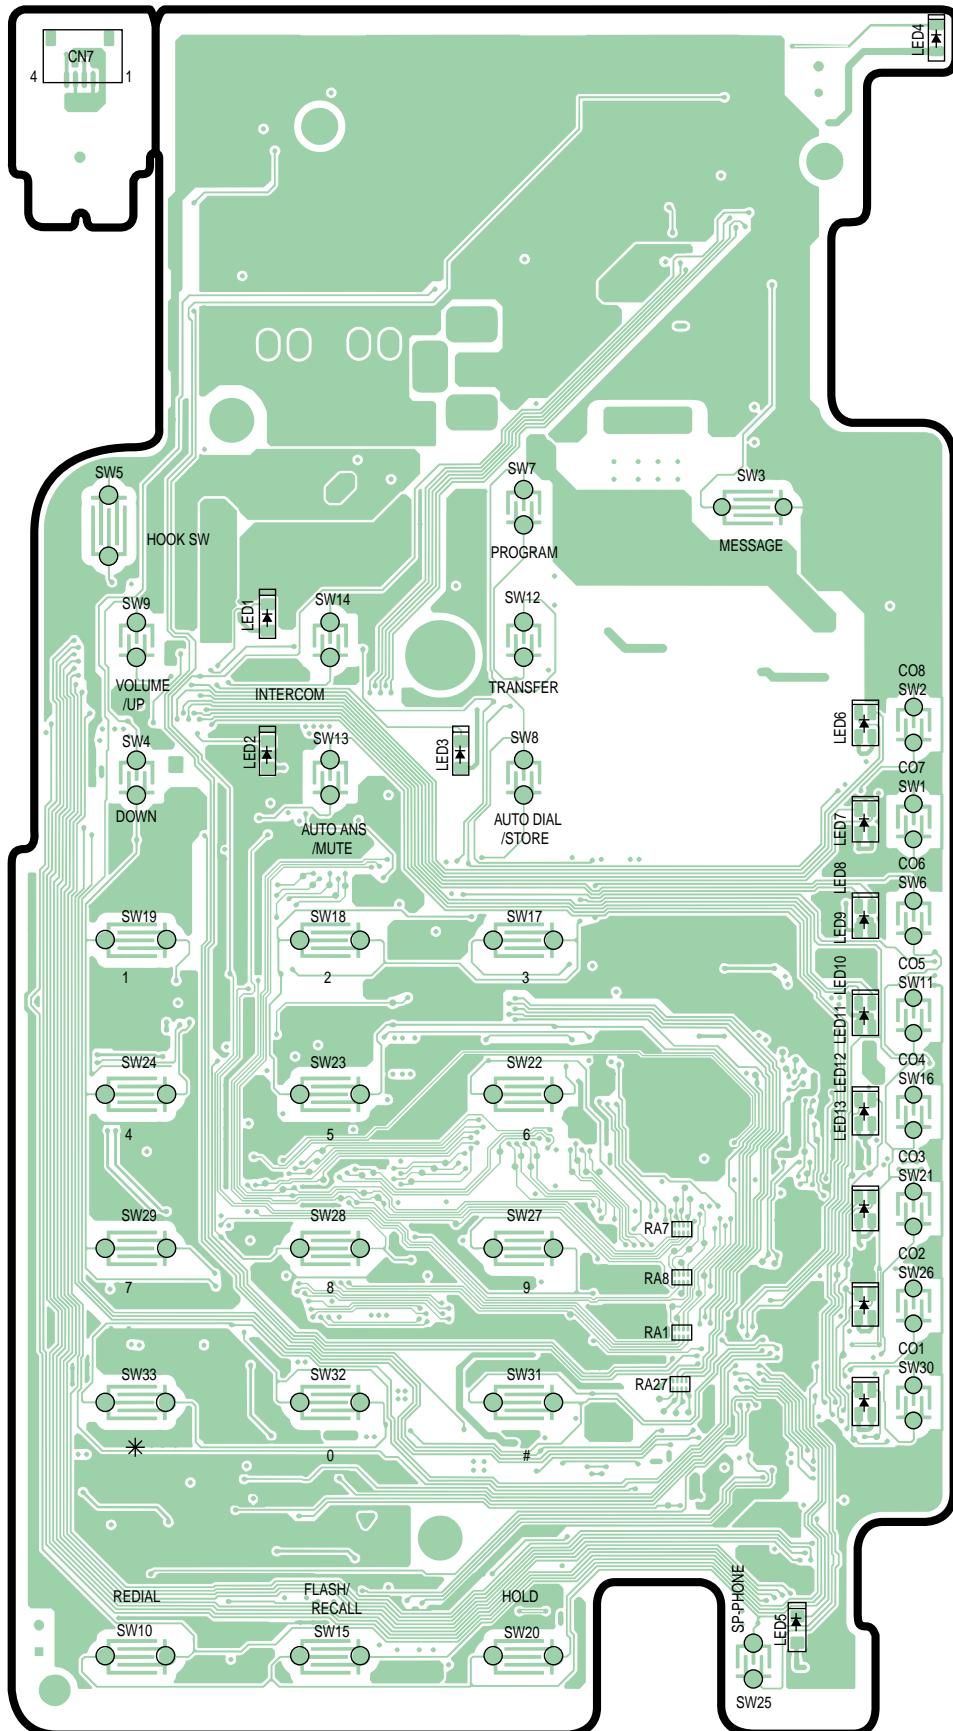

18 PRINTED CIRCUIT BOARD

18.1. MAIN BOARD : COMPONENT VIEW

KX-NT265X/KX-NT265X-B MAIN BOARD COMPORNENT VIEW

18.2. MAIN BOARD : BOTTOM VIEW

KX-NT265X/KX-NT265X-B MAIN BOARD BOTTOM VIEW
