# 1 SAFETY PRECAUTIONS

## 1.1. General Guide

1. It is advisable to insert an isolation transformer in the AC supply before servicing a hot chassis.

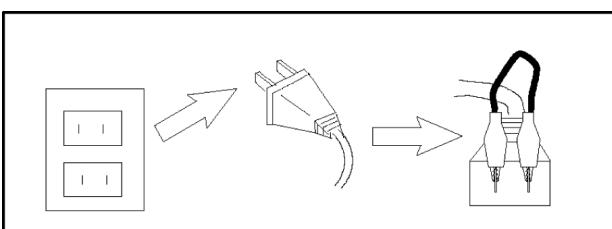

2. When servicing, observe the original lead dress, especially the lead dress in the high voltage circuits. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
3. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers, shields, and isolation R-C combinations, are properly installed.
4. When the receiver is not to be used for a long period of time, unplug the power cord from the AC outlet.

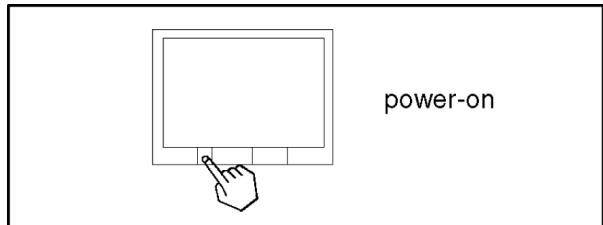

5. Potential, as high as **32.0 kV** is present when this receiver is in operation. Operation of the receiver without the rear cover involves the danger of a shock hazard from the receiver power supply. Servicing should not be attempted by anyone who is not thoroughly familiar with the precautions necessary when working on high voltage equipment. Always discharge the anode of the picture tube to the receiver chassis before handling the tube.
6. After servicing make the following leakage current checks to prevent the customer from being exposed to shock hazards.

## 1.2. Leakage Current Cold Check

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.

2. Turn on the receiver's power switch.

3. Measure the resistance value, with an ohmmeter, between the jumper AC plug and each exposed metallic cabinet part on the receiver, such as screw heads, aerials, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between **4 MΩ and 20 MΩ**. When the exposed metal does not have a return path to the chassis, the reading must be infinite.

## 1.3. Leakage Current Hot Check (See Fig. 1)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a **2kΩ, 10 W** resistor in series with an exposed metallic part on the receiver and an earth such as a water pipe.
3. Use an AC voltmeter, with high impedance type, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.

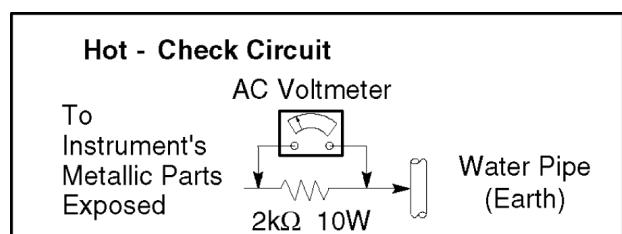

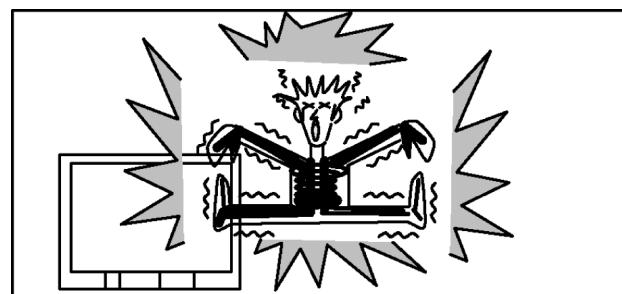

FIG. 1

5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential any point should not exceed **1.0 V rms**. In the case of a measurement being outside of the limits specified, there is a possibility of a shock hazard, and the receiver should be repaired and rechecked before it is returned to the customer.

## 1.4. X-Radiation

Warning :

1. The potential sources of X-Radiation in TV sets are the EHT section and the picture tube.

2. When using a picture tube test rig for service, ensure that the rig is capable of handling **32.0 kV** without causing X-Radiation.

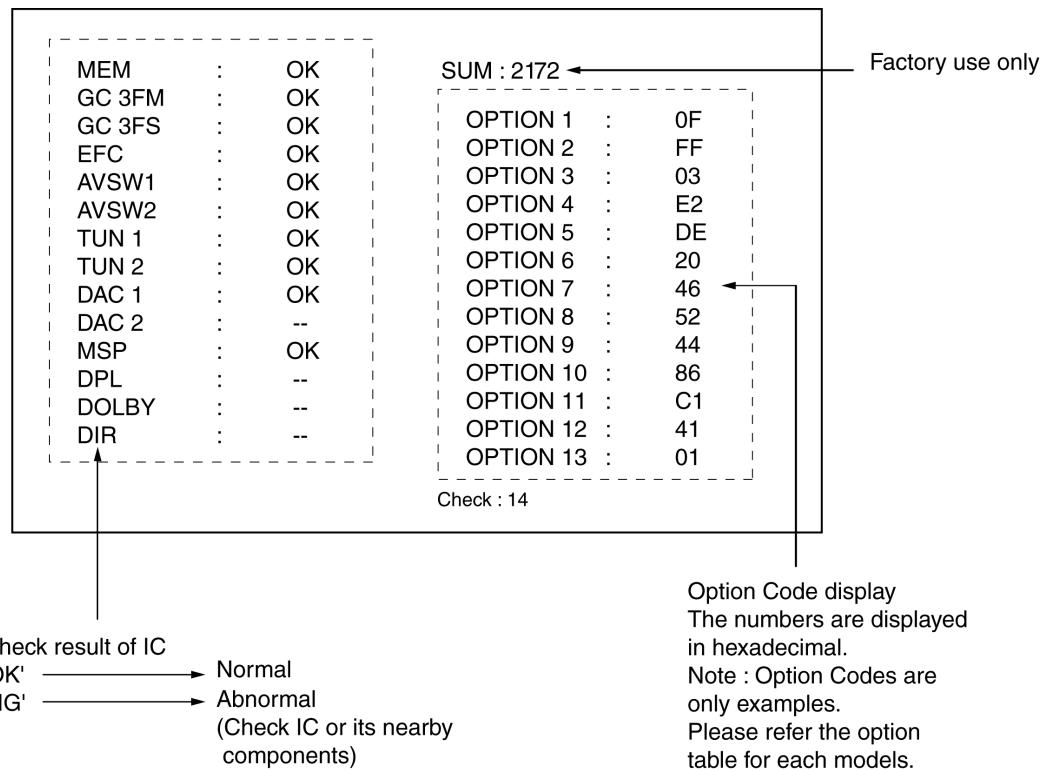

**Note:** It is important to use an accurate periodically calibrated high voltage meter.

1. Set the brightness to minimum.
2. Measure the High Voltage. The meter reading should indicate **31.0 ± 1 kV**. If the meter indication is out of tolerance, immediate service and correction is required to prevent the possibility of premature component failure.
3. To prevent the possibility of X-Radiation, it is essential to use the specified picture tube.

## 2 SELF CHECK

Selection of SELF CHECK Mode

Press Timer button on the remote control and press button - on the TV set.

### 3 MARKET MODE FUNCTION

## 4.7. VRS Adjustment

### 1. PREPARATION

- Set DY to CRT not to tilt up and down and left and right deflection. (Fig. 11)
- Set CY to CRT and set CY magnet primarily.  
Pur Mg : Set Pur Mg that 2 magnets are vertical position.  
VRS Mg : Set VRS Mg that 2 magnets are side position.
- Set geomagnetic correction DAC [0].

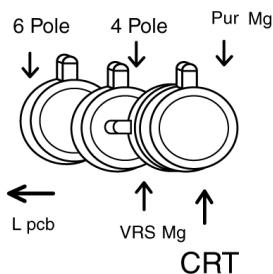

FIG. 11

### 2. ADJUSTMENT

- Receive the white balance pattern.
- Adjust V-CENTER.
- Set R,B CUT OFF to minimum (0), and set G CUT OFF to center.
- Receive the aging pattern.
- Set 2 magnet of vertical position to up and down equally so that center part of CRT. (Fig. 12)

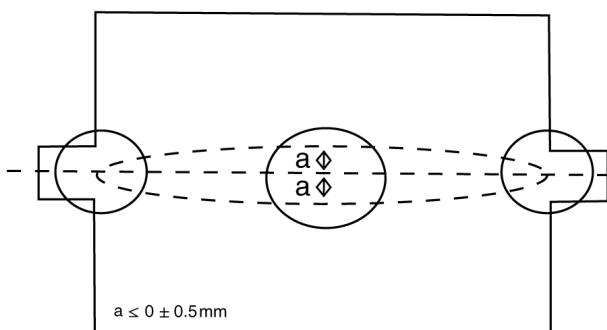

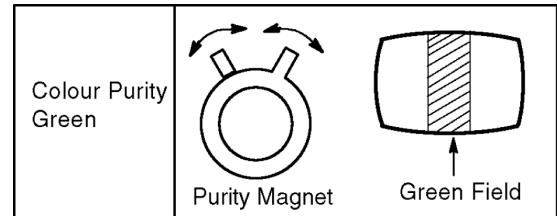

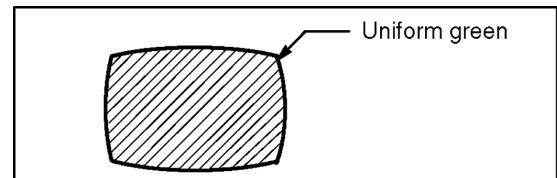

Fig. 12

## 4.8. Colour Purity

- Operate the TV set for over 60 minutes.
- Receive a purity pattern signal. (white pattern)
- Set Bright and Contrast controls to their maximum positions.
- Set V-POS to 128.
- Adjust roughly the static convergence magnets.
- Fully degauss the picture tube using an external degaussing coil.
- Loosen a clamp screw for the deflection yoke and move the deflection yoke as close to the purity magnet as possible.
- Adjust the purity magnet so that a vertical green field is obtained at the center of the screen.

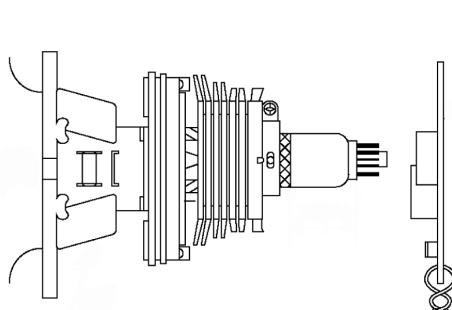

- Slowly press the deflection yoke and set it where a uniform green field is obtained.

- Adjust roughly the Low Light controls and make sure that a uniform white field is obtained.

- Tighten the clamp screw.

## 4.9. Convergence

### 1. INSTRUMENT

- Helmholtz device

### 2. PREPARATION

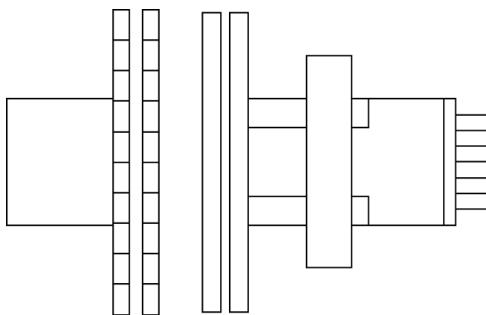

- Set the Helmholtz device to local magnetic field.  
Horizontal :  $0 \pm 0.03 \times 10^{-4}$  T
- Receive the cross hatch pattern.
- Picture menu : DYNAMIC Normal and adjust BRIGHT DAC until gray portion of cross hatch.
- Set DY to CRT not to tilt (up and down and left and right).

### 3. ADJUSTMENT

- Static convergence Adjustment

- Make sure that magnets are positioned shown in Fig. 13.
- Adjust 4-pole magnets (Fig. 13) to align center dots of R and B and adjust 6-pole magnets to align center dots to G.
- After adjustment, secure magnets with magnet lock of white lacquer.4  
\*Beams move with rotating when static magnets are turned.  
Rotational reduce of beams differs by angle of two magnets.  
Therefore, repeat magnet adjustments several times

so that all are aligned completely.

6-pole Mg (G-R, B)  
4-pole Mg (G-3)

Fig. 13

#### b. YHC, YV, XV, Adjustment (Fig. 14)

- Adjust so that Static and Dynamic convergence is best with YHC, VR, YV and XV coil.  
In case of static convergence is tilted, repeat (1) Static convergence Adjustment.

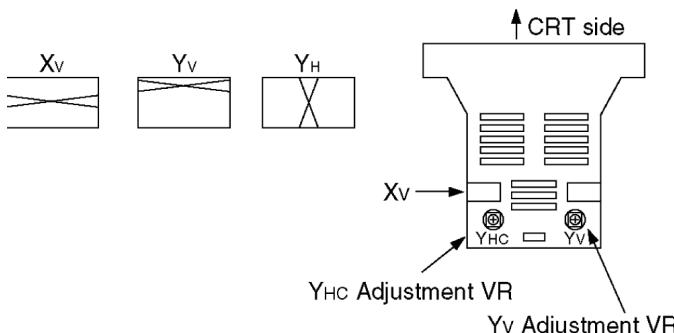

Fig. 14

#### c. Dynamic convergence Adjustment

- When dynamic convergence is bad, fixing permalloy between neck and DY so that dynamic convergence is best.
- Confirm that left upper side line is straight.  
When left upper side line isn't straight, put magnet on DY and adjust the left upper side line to straight.

## 4.10. Cut Off

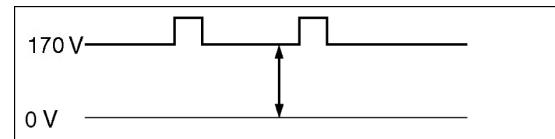

### Preparation

- Receive a colour bar signal with colour "OFF", and operate the TV set more than 15 minutes.
- Set the picture menu to "DYNAMIC NORMAL" and the AI to off.
- Connect an oscilloscope to TPL7 with DC mode.
- Set the TV set to Service Mode 1.
- Screen VR : Min.
- Set the data level of SUB BRIGHT, R, G, B-CUTOFF and R, G, B-DRIVE to the table values.

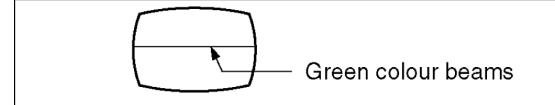

Display	Date Level
R High (R-CUT OFF)	128
G High (G-CUT OFF)	128
B High (B-CUT OFF)	128
R Low (R-DRIVE)	175
G Low (G-DRIVE)	175
B Low (B-DRIVE)	175
SUB BRIGHT	128

### Adjustment

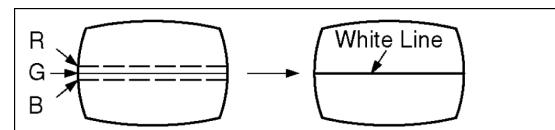

- Select G-CUTOFF adjustment mode and collapse vertical scan.
- Adjust G-CUTOFF control to become the DC=0V to video level at 180V as shown below.

- Slowly turn the screen control clockwise until a green colour horizontal line appears on the picture tube. This is the setting point for the screen control.  
Note that do not adjust the G-CUTOFF setting in the following procedure.

- Adjust the remained R and B-CUTOFF controls so as to get a white horizontal line on the screen.

- Return to full field SCAN by pushing the position 5 key on the remote control.
- Adjust the R-Drive and B-Drive controls as to obtain uniform white on the white bar of the greyscale pattern.
- Confirm correct B/W rendition and greyscale tracking or repeat CUTOFF and drive control setup.  
Note:  
Write down the original value for each address adjustment before adjusting anything.

#### Important Safety Notice

Components identified by  $\Delta$  mark have special characteristics important for safety.  
When replacing any of these components, use only manufacturer's specified parts.

#### Notes:

##### 1. Resistor

All resistors are carbon 1/4W resistor, unless marked as follows:

Unit of resistance is OHM [ $\Omega$ ] ( $K=1,000$ ,  $M=1,000,000$ ).

$\bigcirc$	: Nonflammable	$\boxtimes$	: Metal Oxide
$\triangle$	: Solid	$\odot$	: Metal Film
$\blacksquare$	: Wire Wound	$\otimes$	: Fuse

##### 2. Capacitor

All capacitors are ceramic 50V capacitor, unless marked as follows:

Unit of capacitance is  $\mu F$ , unless otherwise noted.

$\otimes$	: Temperature Compensation	$\begin{array}{c} + \\ \text{H} \\ \text{N} \end{array}$	: Electrolytic
$\text{M}$	: Polyester	$\begin{array}{c} - \\ \text{B} \\ \text{P} \end{array}$	: Bipolar
$\text{m}$	: Metalized Polyester	$\text{T}$	: Dipped Tantalum
$\blacksquare$	: Polypropylene	$\text{Z}$	: Z-Type

##### 3. Coil

Unit of inductance is  $\mu F$ , unless otherwise noted.

##### 4. Test Point

$\textcircled{Q}$  : Test Point position

##### 5. Earth Symbol

$\text{---}$  : Chassis Earth (Cold)  $\downarrow$  : Line Earth (Hot)

##### 6. Voltage Measurement

Voltage is measured by a DC voltmeter.

Conditions of the measurement are the following:

Power Source .....	AC 110-240 V, 50/60 Hz
Receiving Signal .....	Colour Bar signal (RF)
All customer's controls .....	Maximum positions

##### 7. Number in red circle indicates waveform number.

(See waveform pattern table.)

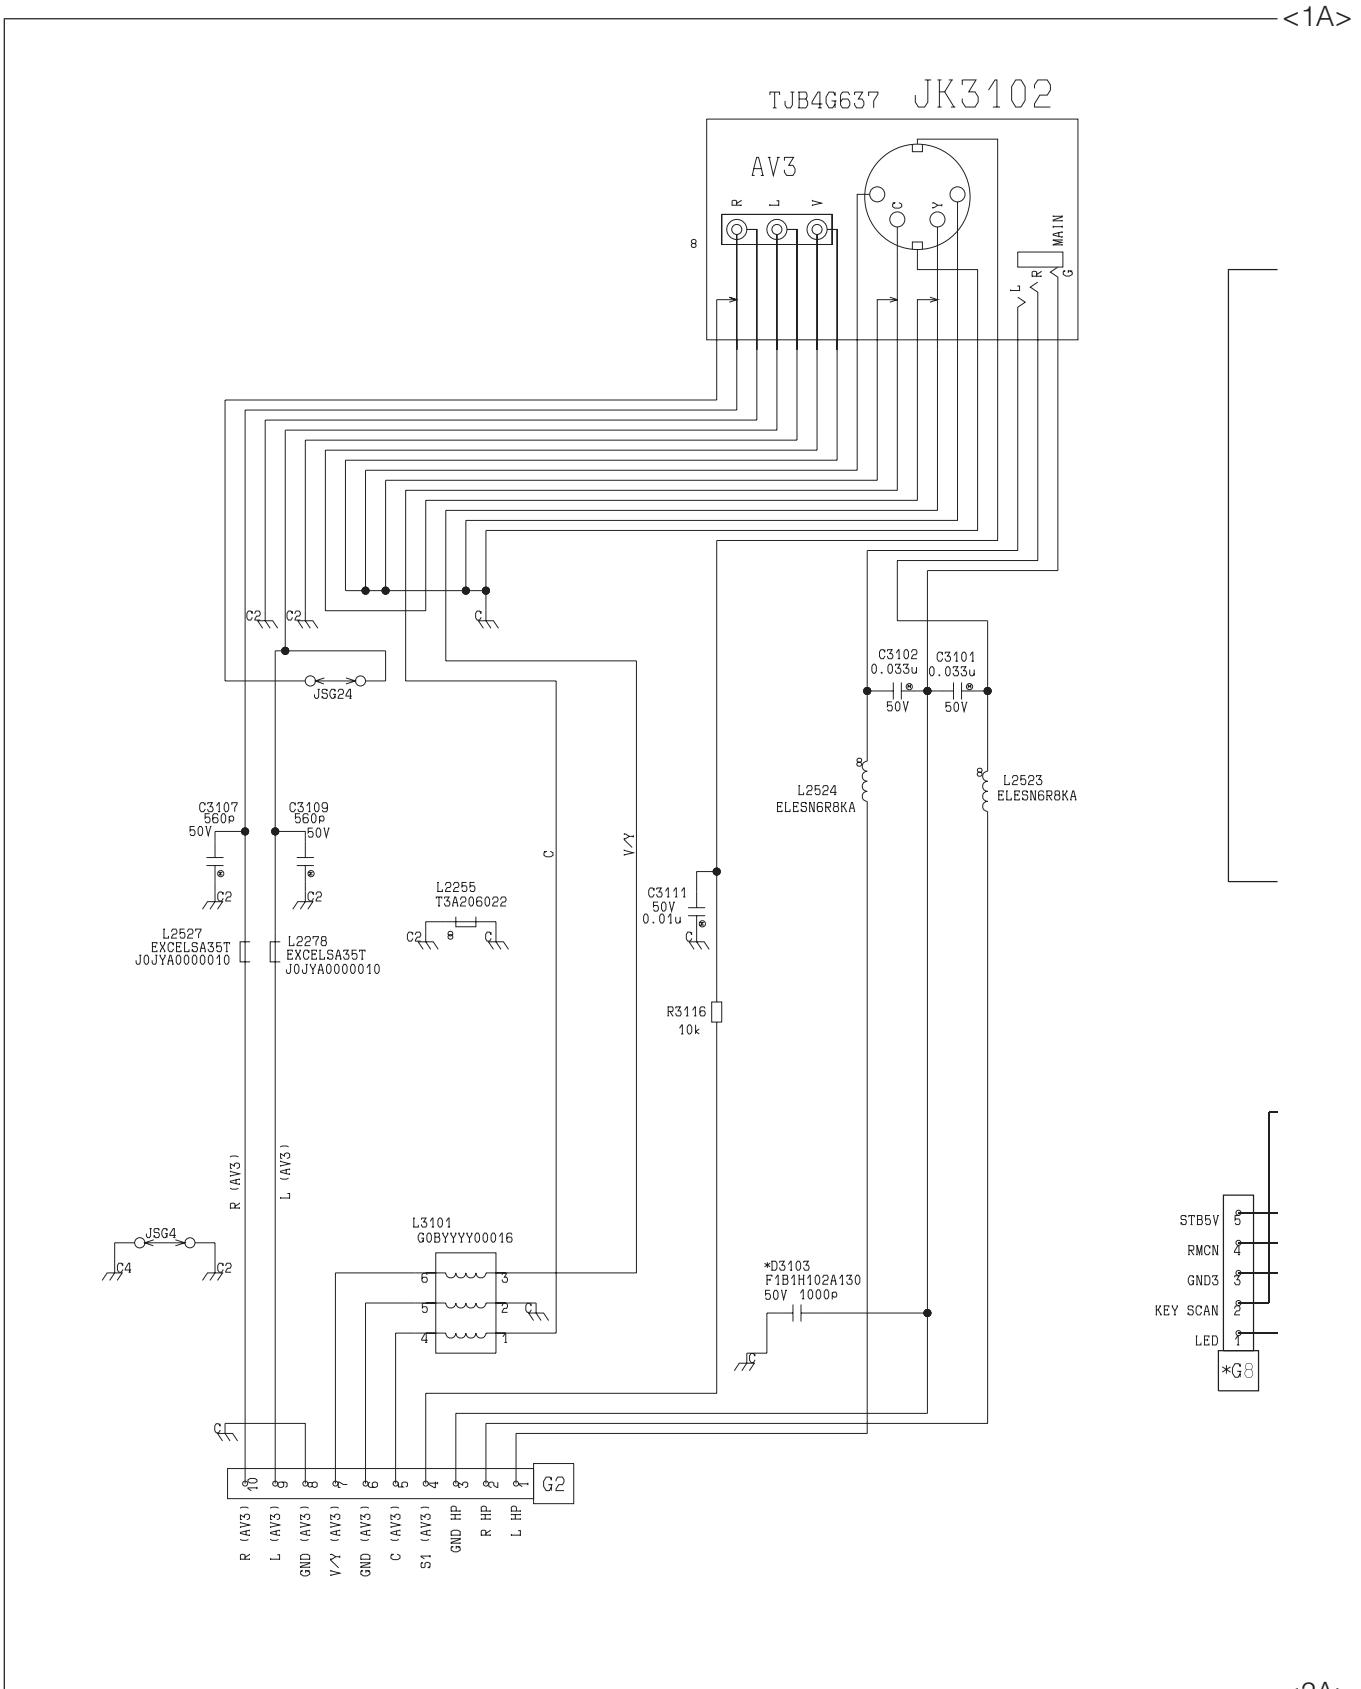

##### 8. When arrow mark ( $\nearrow$ ) is found, connection is easily found from the direction of arrow

##### 9. Indicates the major signal flow. $\rightarrow$ : Video $\Rightarrow$ : Audio
